Chapter 1

Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

Chapter 4

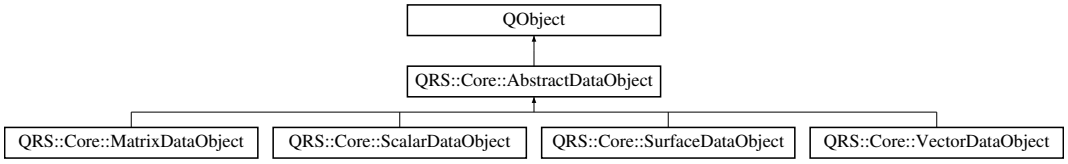
Class Documentation

4.1 QRS::Core::AbstractDataObject Class Reference

Data object which is designied in the way to be represented in a table easily.

`#include <abstractdataobject.h>`

Inheritance diagram for QRS::Core::AbstractDataObject:



Public Types

- enum **ObjectType** { **kScalar** , **kVector** , **kMatrix** , **kSurface** }

Public Member Functions

- AbstractDataObject (ObjectType type, QString const &name)

  Base constructor.
- virtual AbstractDataObject ∗ **clone** () const =0
- virtual DataItemType & **addItem** (DataKeyType key)=0
- void removeItem (DataValueType key)

  Remove an entity with the specified key.
- bool changeItemKey (DataKeyType oldKey, DataKeyType newKey, DataHolder ∗items=nullptr)

  Modify a key existed.
- DataValueType getAvailableItemKey (DataValueType key, DataHolder const ∗items=nullptr) const
- bool setArrayValue (DataKeyType key, DataValueType newValue, IndexType iRow=0, IndexType iColumn=0)

  Set an array value with the specified indices.
- quint32 **numberItems** () const
- DataHolder const & **getItems** ()
- DataIDType **id** () const

- ObjectType **type** () const
- QString const & **name** () const
- void **setName** (QString const &name)
- virtual void serialize (QDataStream &stream) const

  Serialize an abstract data object.
- virtual void deserialize (QDataStream &stream)

  Partly deserialize an abstract data object.
- virtual void **import** (QTextStream &stream)=0

Static Public Member Functions

- static DataIDType **maxObjectID** ()
- static void **setMaxObjectID** (DataIDType iMaxObjectID)

Protected Attributes

- const ObjectType **mkType**
- QString **mName**
- DataIDType **mID**
- DataHolder **mItems**

Static Private Attributes

- static DataIDType **smMaxObjectID** = 0

Friends

- QDataStream & operator<< (QDataStream &stream, AbstractDataObject const &obj)

  Print a data object to a stream.

4.1.1 Detailed Description

Data object which is designied in the way to be represented in a table easily.

4.1.2 Member Function Documentation

4.1.2.1 deserialize()

```
void AbstractDataObject::deserialize (
            QDataStream & stream )  [virtual]
```

Partly deserialize an abstract data object.

It is assumed that a type and name have already been assigned. So, only an identifier and items need to be set.

Reimplemented in QRS::Core::SurfaceDataObject.

4.1.2.2 getAvailableItemKey()

```
DataValueType AbstractDataObject::getAvailableItemKey (
            DataValueType key,
            DataHolder const * items = nullptr ) const
```

Check if a given key is unique

Returns

Returns the input value of the key if it is unique, otherwise – a first available key

The documentation for this class was generated from the following files:

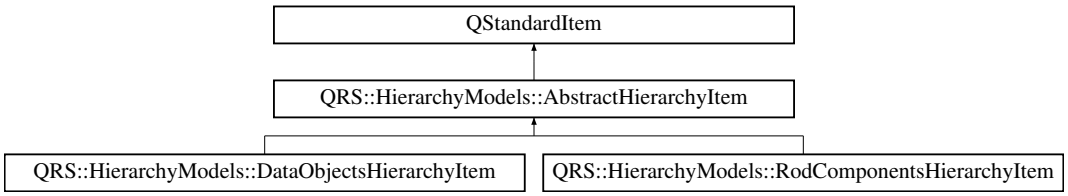
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractdataobject.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractdataobject.cpp

4.2 QRS::HierarchyModels::AbstractHierarchyItem Class Reference

Item to represent a hierarchy of elements of the same type.

`#include <abstracthierarchyitem.h>`

Inheritance diagram for QRS::HierarchyModels::AbstractHierarchyItem:



Public Types

- enum **ItemType** { **kDataObjects** = QStandardItem::UserType , **kRodComponents** }

Public Member Functions

- **AbstractHierarchyItem** (QIcon const &icon, QString const &text, Core::HierarchyNode *pNode)
- void writePointer (QDataStream &out) const

  Write the pointer to the current item to a stream.
- virtual int **type** () const =0

Static Public Member Functions

- static AbstractHierarchyItem * readPointer (QDataStream &in)

  Retrieve a pointer to an item from a stream.

Protected Attributes

- Core::HierarchyNode * **mpNode** = nullptr

Friends

- class **AbstractHierarchyModel**

4.2.1 Detailed Description

Item to represent a hierarchy of elements of the same type.

The documentation for this class was generated from the following files:

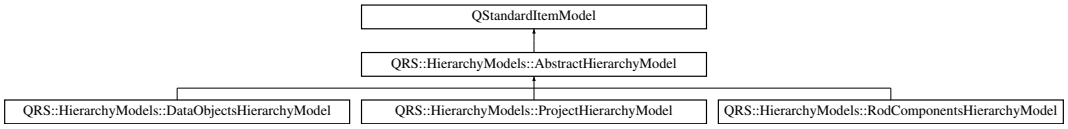
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/abstracthierarchyitem.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/abstracthierarchyitem.cpp

4.3 QRS::HierarchyModels::AbstractHierarchyModel Class Reference

Hierarchy model which enables one to drag and drop elements of the same type.

`#include <abstracthierarchymodel.h>`

Inheritance diagram for QRS::HierarchyModels::AbstractHierarchyModel:



Signals

- void hierarchyChanged ()

  Emitted when hierarchical elements get renamed, moved or deleted.

Public Member Functions

- **AbstractHierarchyModel** (QString const &mimeType, QTreeView *pView=nullptr)
- virtual void **updateContent** ()=0
- virtual void **clearContent** ()=0
- Qt::DropActions supportedDragActions () const override

  Specify allowed drag actions.
- Qt::DropActions supportedDropActions () const override

  Specify allowed drop actions.
- QStringList mimeTypes () const override

  Retrieve the mime types.
- QMimeData * mimeData (const QModelIndexList &indicies) const override

  Encode each item according to a given list of indicies.
- bool dropMimeData (QMimeData const *pMimeData, Qt::DropAction action, int row, int column, const QModelIndex &parent) override

  Process the drop action.

Protected Attributes

- QString const **mkMimeType**

Private Member Functions

- bool processDropOnItem (QDataStream &stream, int &numItems, QModelIndex const &indexParent)

  Merge several items into one entity.
- bool processDropBetweenItems (QDataStream &stream, int &numItems, QModelIndex const &indexParent, int row)

  Change the order of items.
- void retrieveExpandedState (NodesState &nodesState, QModelIndex const &indexParent, QTreeView const *pView)

  Retrieve information about whether each directory is expanded.
- void setExpandedState (NodesState &nodesState, QModelIndex const &indexParent, QTreeView *pView)

  Set an expanded state of each directory.
- void updateContentExpanded ()

4.3.1 Detailed Description

Hierarchy model which enables one to drag and drop elements of the same type.

4.3.2 Member Function Documentation

4.3.2.1 updateContentExpanded()

```
void AbstractHierarchyModel::updateContentExpanded ( )  [private]
```

Since items are destroyed whenever the content is updated, an expanded state of each directory is saved and then set again.

The documentation for this class was generated from the following files:

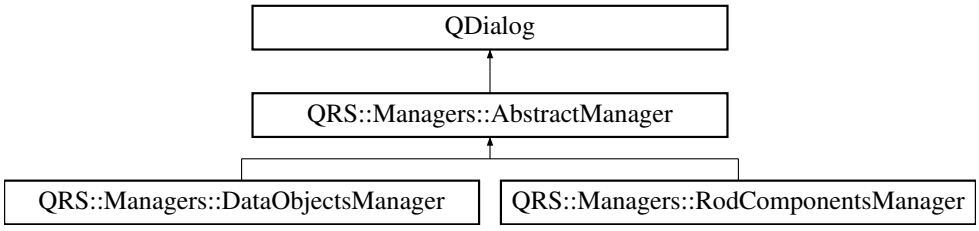
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/abstracthierarchymodel.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/abstracthierarchymodel.cpp

4.4 QRS::Managers::AbstractManager Class Reference

Abstract manager to create objects of different types.

```
#include <abstractmanager.h>
```

Inheritance diagram for QRS::Managers::AbstractManager:



Public Types

- enum **ManagerType** { **kDataObjects** , **kRodComponents** , **kRodConstructor** }

Public Slots

- virtual void **apply** ()=0

Signals

- void **closed** (QRS::Managers::AbstractManager::ManagerType type)

Public Member Functions

- **AbstractManager** (QString &lastPath, QSettings &settings, ManagerType type, QString groupName, QWidget ∗parent=nullptr)
- void saveSettings ()

  Save settings to a file.
- void restoreSettings ()

  Restore settings from a file.

Protected Member Functions

- void closeEvent (QCloseEvent ∗pEvent) override

  Save settings and delete handling widgets before closing the window.
- void setToolBarShortcutHints (QToolBar ∗pToolBar)

  Helper function to add a shortcut hint to all actions which a toolbar contains.

Protected Attributes

- ads::CDockManager ∗ **mpDockManager** = nullptr
- QString & **mLastPath**

Private Attributes

- QSettings & **mSettings**
- ManagerType const **mkType**
- QString const **mkGroupName**

4.4.1 Detailed Description

Abstract manager to create objects of different types.

The documentation for this class was generated from the following files:

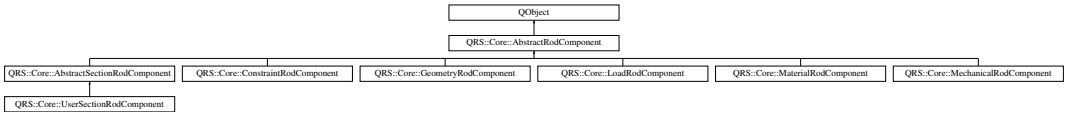
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractmanager.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractmanager.cpp

4.5 QRS::Core::AbstractRodComponent Class Reference

Component of the rod structure which characterizes one of its properties.

`#include <abstractrodcomponent.h>`

Inheritance diagram for QRS::Core::AbstractRodComponent:



Public Types

- enum **ComponentType** {
  kGeometry , **kSection** , **kMaterial** , **kLoad** ,
  kConstraint , **kMechanical** }

Public Member Functions

- **AbstractRodComponent** (ComponentType componentType, QString const &name)
- virtual AbstractRodComponent ∗ **clone** () const =0
- virtual bool **isDataComplete** () const =0
- DataIDType **id** () const
- ComponentType **componentType** () const
- QString const & **name** () const
- void **setName** (QString const &name)
- virtual void **serialize** (QDataStream &stream) const =0
- virtual void **deserialize** (QDataStream &stream, DataObjects const &dataObjects)=0
- virtual void **resolveReferences** (DataObjects const &dataObjects)=0

Static Public Member Functions

- static DataIDType **maxComponentID** ()
- static void **setMaxComponentID** (DataIDType iMaxComponentID)

Protected Member Functions

- void writeDataObjectPointer (QDataStream &stream, AbstractDataObject const ∗pDataObject) const

  Helper function to write the identifier of a data object.
- AbstractDataObject const ∗ readDataObjectPointer (QDataStream &stream, DataObjects const &data↩ Objects) const

  Helper function to retrieve the pointer to the data object by its identifier.
- AbstractDataObject const ∗ getDataObject (DataObjects const &dataObjects, DataIDType id) const

  Retrieve a data object from a set by id.
- AbstractDataObject const ∗ substituteDataObject (DataObjects const &dataObjects, AbstractDataObject const ∗pDataObject) const

  Substitute a data object with its updated version.

Protected Attributes

- ComponentType const **mkComponentType**
- QString **mName**
- DataIDType **mID**

Static Private Attributes

- static DataIDType **smMaxComponentID** = 0

Friends

- QDataStream & operator<< (QDataStream &stream, AbstractRodComponent const &component)

  Print a rod component to a stream.

4.5.1 Detailed Description

Component of the rod structure which characterizes one of its properties.

The documentation for this class was generated from the following files:

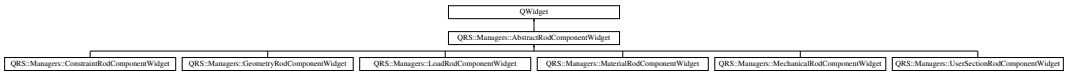
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractrodcomponent.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractrodcomponent.cpp

4.6 QRS::Managers::AbstractRodComponentWidget Class Reference

Widget to construct rod components of different types.

`#include <abstractrodcomponentwidget.h>`

Inheritance diagram for QRS::Managers::AbstractRodComponentWidget:



Signals

- void **modified** ()
- void **editDataObjectRequested** (Core::DataIDType id)

Public Member Functions

- **AbstractRodComponentWidget** (QString const &mimeType, QWidget *parent=nullptr)

Protected Member Functions

- void setDataObjectEditConnections (DataObjectLineEdit *pEdit, DataObjectSetFun &setFun)

  Specify connections of an editor which hold pointers to data objects of different types.

Protected Attributes

- QString const **mkMimeType**

4.6.1 Detailed Description

Widget to construct rod components of different types.

The documentation for this class was generated from the following files:

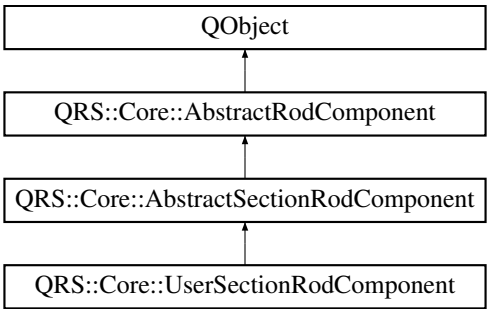
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractrodcomponentwidget.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractrodcomponentwidget.cpp

4.7 QRS::Core::AbstractSectionRodComponent Class Reference

General cross section of a rod.

`#include <abstractsectionrodcomponent.h>`

Inheritance diagram for QRS::Core::AbstractSectionRodComponent:



Public Types

- enum **SectionType** { **kUserDefined** }

Public Member Functions

- **AbstractSectionRodComponent** (SectionType sectionType, QString const &name)
- virtual ~AbstractSectionRodComponent ()=0

  Decrease a number of instances while being destroyed.
- void serialize (QDataStream &stream) const override

  Serialize a cross section.
- void deserialize (QDataStream &stream, DataObjects const &dataObjects) override

  Partly deserialize an abstract rod component.
- void resolveReferences (DataObjects const &dataObjects) override

  Resolve references of a cross-section.
- SectionType **sectionType** () const

Static Public Member Functions

- static quint32 **numberInstances** ()

Protected Member Functions

- void copyIntegratedProperties (AbstractSectionRodComponent const *pSection)

  Copy integrated properties of a cross section.

Protected Attributes

- SectionType const **mkSectionType**
- QPointer< ScalarDataObject const > **mpArea**
- QPointer< ScalarDataObject const > **mpInertiaMomentTorsional**
- QPointer< ScalarDataObject const > **mpInertiaMomentX**
- QPointer< ScalarDataObject const > **mpInertiaMomentY**
- QPointer< ScalarDataObject const > **mpCenterCoordinateX**
- QPointer< ScalarDataObject const > **mpCenterCoordinateY**

Static Protected Attributes

- static quint32 **smNumInstances** = 0

4.7.1 Detailed Description

General cross section of a rod.

4.7.2 Member Function Documentation

4.7.2.1 deserialize()

```
void AbstractSectionRodComponent::deserialize (
            QDataStream & stream,
            DataObjects const & dataObjects )  [override], [virtual]
```

Partly deserialize an abstract rod component.

It is assumed that a type and name have already been assigned. So, only integrated properties need to be set.

Implements QRS::Core::AbstractRodComponent.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractsectionrodcomponent.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractsectionrodcomponent.cpp

4.8 QRS::Core::Array< T > Class Template Reference

Numerical array class.

`#include <array.h>`

Classes

- struct Row

  Proxy class to acquire a row by index.

Public Member Functions

- **Array** (IndexType numRows=0, IndexType numCols=0)
- Array (Array< T > const &another)

  Copy constructor.
- Array (Array< T > &&another)

  Move constructor.
- T * **data** ()
- void resize (IndexType numRows, IndexType numCols)

  Resize and copy previous values if possible.
- void removeColumn (IndexType iRemoveColumn)

  Remove a column by index.
- void swapColumns (IndexType iFirstColumn, IndexType iSecondColumn)

  Swap two columns.
- IndexType **rows** () const
- IndexType **cols** () const
- IndexType **size** () const
- Row< T > **operator[ ]** (IndexType iRow)
- Row< T > **operator[ ]** (IndexType iRow) const
- Array & operator= (Array< T > const &another)

  Assignment operator.

Private Attributes

- IndexType mNumRows

  Number of rows.
- IndexType mNumCols

  Number of columns.
- T * mpData = nullptr

  Pointer to the data stored.

Friends

- template<typename K >
  QDebug operator<< (QDebug stream, Array< K > &array)

  Print all array values using the matrix format.
- template<typename K >
  QDataStream & operator<< (QDataStream &stream, Array< K > const &array)

  Write an array to a stream.
- template<typename K >
  QDataStream & operator>> (QDataStream &stream, Array< K > &array)

  Read an array from a stream.

4.8.1 Detailed Description

template<typename T>
class QRS::Core::Array< T >

Numerical array class.

The documentation for this class was generated from the following files:

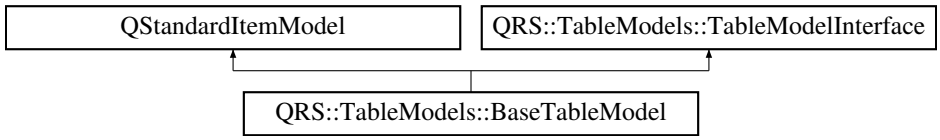
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/array.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/array.cpp

4.9 QRS::TableModels::BaseTableModel Class Reference

Table model to represent either a scalar or vector data object.

`#include <basetablemodel.h>`

Inheritance diagram for QRS::TableModels::BaseTableModel:



Public Member Functions

- **BaseTableModel** (QWidget *parent=nullptr)
- void setDataObject (Core::AbstractDataObject *pDataObject)

  Set a data object to represent.
- bool setData (const QModelIndex &indexEdit, const QVariant &value, int role=Qt::EditRole) override

  Set the data acquired from a delegate.
- void insertItemAfterSelected (QItemSelectionModel *pSelectionModel) override

  Insert a new item after selected one.
- void **insertLeadingItemAfterSelected** (QItemSelectionModel *) override
- void removeSelectedItem (QItemSelectionModel *pSelectionModel) override

  Remove an array under selection.
- void **removeSelectedLeadingItem** (QItemSelectionModel *) override

Private Member Functions

- void updateContent ()

  Represent all items which a data object contains.
- void clearContent ()

  Clear previously created items.

Private Attributes

- Core::AbstractDataObject * **mpDataObject** = nullptr

Additional Inherited Members

4.9.1 Detailed Description

Table model to represent either a scalar or vector data object.

The documentation for this class was generated from the following files:

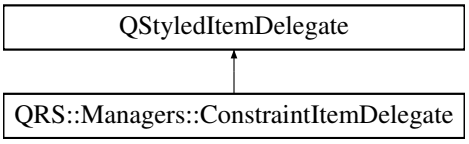
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/basetablemodel.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/basetablemodel.cpp

4.10 QRS::Managers::ConstraintItemDelegate Class Reference

Class to specify how options of a constraint can be edited.

`#include <constraintitemdelegate.h>`

Inheritance diagram for QRS::Managers::ConstraintItemDelegate:



Signals

- void **typeCreated** (int iRow) const
- void **typeChanged** (int iRow, Core::ConstraintRodComponent::ConstraintType oldType) const
- void **coordinateSystemChanged** (int iRow) const

Public Member Functions

- **ConstraintItemDelegate** (Core::ConstraintRodComponent const &constraintRodComponent, Constraint↩ TypeNames const &types, ConstraintCoordinateSystemNames const &coordinateSystems, QObject *parent=nullptr)
- QWidget * createEditor (QWidget *pCell, const QStyleOptionViewItem &option, const QModelIndex &index) const override

  Create a comboBox to choose items.
- void setEditorData (QWidget *pEditor, const QModelIndex &index) const override

  Specify data to show.
- void setModelData (QWidget *pEditor, QAbstractItemModel *pModel, const QModelIndex &index) const override

  Set data to a model.
- void updateEditorGeometry (QWidget *pEditor, const QStyleOptionViewItem &option, const QModelIndex &index) const override

  Set a geometry to render.

Private Attributes

- Core::ConstraintRodComponent const & **mConstraintRodComponent**
- ConstraintTypeNames const & **mTypes**
- ConstraintCoordinateSystemNames const & **mCoordinateSystems**

4.10.1 Detailed Description

Class to specify how options of a constraint can be edited.

The documentation for this class was generated from the following files:

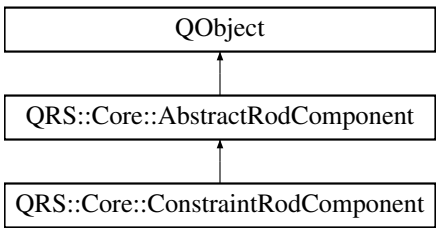
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintitemdelegate.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintitemdelegate.cpp

4.11 QRS::Core::ConstraintRodComponent Class Reference

Component to restrict movements of a rod.

`#include <constraintrodcomponent.h>`

Inheritance diagram for QRS::Core::ConstraintRodComponent:



Public Types

- enum **ConstraintType** {
  kDisplacementX , **kDisplacementY** , **kDisplacementZ** , **kRotationX** ,
  kRotationY , **kRotationZ** }
- enum **ConstraintCoordinateSystem** { **kGlobal** , **kLocal** }
- using **Constraints** = std::map< ConstraintType, ConstraintCoordinateSystem >

Public Member Functions

- **ConstraintRodComponent** (QString const &name)
- ~ConstraintRodComponent ()

  Decrease a number of instances while being destroyed.
- AbstractRodComponent * clone () const override

  Clone a constraint rod component.
- bool **isDataComplete** () const override
- void serialize (QDataStream &stream) const override

  Serialize all properties of a constraint component.
- void deserialize (QDataStream &stream, DataObjects const &dataObjects) override

  Deserialize a constraint component.
- void **resolveReferences** (DataObjects const &) override
- bool isConstraintExist (ConstraintType type) const

  Check whether the constraint of the specified type exists.
- void setConstraint (ConstraintType type, ConstraintCoordinateSystem coordinateSystem)

  Set a constraint.
- bool removeConstraint (ConstraintType type)

  Remove the constriant of a given type.
- Constraints const & **constraints** () const

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- Constraints **mConstraints**

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.11.1 Detailed Description

Component to restrict movements of a rod.

The documentation for this class was generated from the following files:

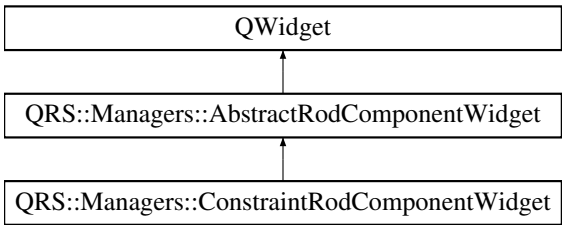
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/constraintrodcomponent.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/constraintrodcomponent.cpp

4.12 QRS::Managers::ConstraintRodComponentWidget Class Reference

Widget to consturct constraints of a rod.

`#include <constraintrodcomponentwidget.h>`

Inheritance diagram for QRS::Managers::ConstraintRodComponentWidget:



Public Member Functions

- **ConstraintRodComponentWidget** (Core::ConstraintRodComponent &constraintRodComponent, QWidget *parent=nullptr)

Private Slots

- void setConstraintData (int iRow)

  Change a constraint property.

Private Member Functions

- void createContent ()

  Create all the widgets.
- QToolBar * createToolBar ()

  Create a toolbar to add and remove constraints.
- void createTableWidget ()

  Create a table to construct constraints.
- void addRow ()

  Add a row at the end of the table.
- void removeSelectedRows ()

  Remove selected rows from the table.
- void representConstraintData ()

  Represent existing constraints.
- void setTableHeight ()

  Set the height of the table to be enough to represent all rows.
- void specifyConstraintNames ()

  Specify names of constraints.
- QVariant getItemData (int iRow, int iColumn)

  Retrieve item data.

Private Attributes

- Core::ConstraintRodComponent & **mConstraintRodComponent**
- QTableWidget * **mpTableConstraint**
- ConstraintItemDelegate * **mpItemDelegate**
- ConstraintTypeNames **mTypeNames**
- ConstraintCoordinateSystemNames **mCoordinateSystemNames**

Additional Inherited Members

4.12.1 Detailed Description

Widget to consturct constraints of a rod.

The documentation for this class was generated from the following files:

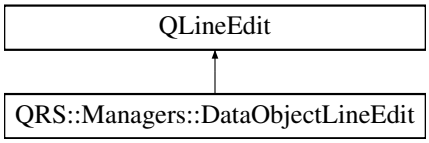
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintrodcomponentwidget.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintrodcomponentwidget.cpp

4.13 QRS::Managers::DataObjectLineEdit Class Reference

Line edit widget to hold a pointer to a data object.

`#include <dataobjectlineedit.h>`

Inheritance diagram for QRS::Managers::DataObjectLineEdit:



Signals

- void **selected** (Core::AbstractDataObject const *pDataObject)
- void **editRequested** (Core::DataIDType id)

Public Member Functions

- **DataObjectLineEdit** (Core::AbstractDataObject const *pDataObject, Core::AbstractDataObject::ObjectType type, QString const &mimeType, QWidget *parent=nullptr)

Private Slots

- void showContextMenu (const QPoint &point)

  Show a menu to modify data.
- void reset ()

  Erase the address of the data object.
- void edit ()

  Try to edit a data object through managers.

Private Member Functions

- void dragEnterEvent (QDragEnterEvent ∗pEvent) override

  Check if the type of the dropped item is correct.
- void dropEvent (QDropEvent ∗pEvent) override

  Process dropping of the approved item.
- void keyPressEvent (QKeyEvent ∗pEvent) override

  Erase the data object address.
- void mouseDoubleClickEvent (QMouseEvent ∗pEvent) override

  Start the editing session when a double click event occurs.

Private Attributes

- Core::AbstractDataObject const ∗ **mpDataObject**
- Core::AbstractDataObject::ObjectType **mType**
- QString const **mkMimeType**

4.13.1 Detailed Description

Line edit widget to hold a pointer to a data object.

The documentation for this class was generated from the following files:

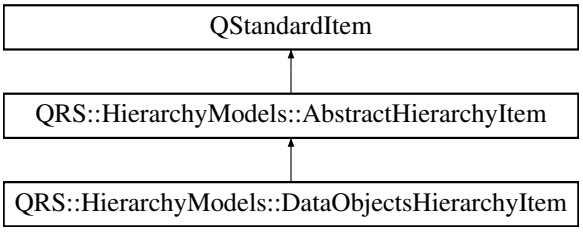
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectlineedit.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectlineedit.cpp

4.14 QRS::HierarchyModels::DataObjectsHierarchyItem Class Reference

Item to represent a hierarchy of data objects.

`#include <dataobjectshierarchyitem.h>`

Inheritance diagram for QRS::HierarchyModels::DataObjectsHierarchyItem:



Public Member Functions

- DataObjectsHierarchyItem (Core::DataObjects &dataObjects, Core::HierarchyTree &hierarchyDataObjects, QString const &text="Root", QIcon const &icon=QIcon())

  Create the representative of the structure of data objects.
- DataObjectsHierarchyItem (Core::HierarchyNode *pNode, Core::AbstractDataObject *pDataObject)

  Construct an item to represent a data object.
- DataObjectsHierarchyItem (Core::HierarchyNode *pNode)

  Construct an item to represent a directory.
- int **type** () const override
- Core::AbstractDataObject const * **getDataObject** () const

Private Member Functions

- void appendItems (Core::DataObjects &dataObjects, Core::HierarchyNode *pNode)

  Create items based on the position in the tree structure.

Private Attributes

- Core::AbstractDataObject * **mpDataObject** = nullptr

Friends

- class **DataObjectsHierarchyModel**
- class **PropertiesModels::DataObjectsPropertiesModel**

Additional Inherited Members

4.14.1 Detailed Description

Item to represent a hierarchy of data objects.

The documentation for this class was generated from the following files:

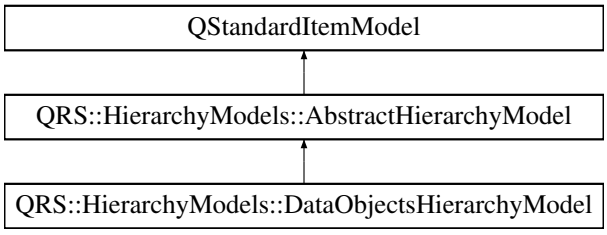
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchyitem.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchyitem.cpp

4.15 QRS::HierarchyModels::DataObjectsHierarchyModel Class Reference

Tree model to represent and modify a hierarchy of data objects.

`#include <dataobjectshierarchymodel.h>`

Inheritance diagram for QRS::HierarchyModels::DataObjectsHierarchyModel:



Public Slots

- void retrieveSelectedItem ()

  Retrieve a selected data object.
- void removeSelectedItems ()

  Remove data objects under selection.

Signals

- void **selected** (Core::DataIDType id)
- void **selectionCleared** ()

Public Member Functions

- **DataObjectsHierarchyModel** (Core::DataObjects &dataObjects, Core::HierarchyTree &hierarchyData↩ Objects, QString const &mimeType, QTreeView ∗pView=nullptr)
- void updateContent () override

  Update all the content.
- void clearContent () override

  Clear all the items.
- bool isEmpty () const

  Check if there are data objcects to represent.
- void selectItem (int iRow)

  Select an item by row index.
- void selectItemByID (Core::DataIDType id)

  Select an item by type and identifier.

Private Slots

- void renameItem (QStandardItem ∗pStandardItem)

  Rename a data object after editing.

Private Member Functions

- DataObjectsHierarchyItem ∗ findItemByID (DataObjectsHierarchyItem ∗pItem, Core::DataIDType const &id)

  Find an item by identifier.
- void selectItem (DataObjectsHierarchyItem ∗pItem)

  Select a specified item.

Private Attributes

- Core::DataObjects & **mDataObjects**
- Core::HierarchyTree & **mHierarchyDataObjects**

Additional Inherited Members

4.15.1 Detailed Description

Tree model to represent and modify a hierarchy of data objects.

The documentation for this class was generated from the following files:

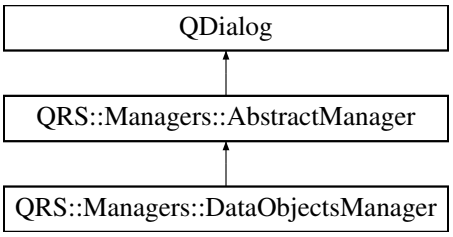
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchymodel.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchymodel.cpp

4.16 QRS::Managers::DataObjectsManager Class Reference

Manager to create objects of different types: scalars, vectors, matroces and surfaces.

`#include <dataobjectsmanager.h>`

Inheritance diagram for QRS::Managers::DataObjectsManager:



Public Slots

- void apply () override

  Apply all the changes made by user.
- Core::AbstractDataObject * addScalar ()

  Add a scalar object.
- Core::AbstractDataObject * addVector ()

  Add a vector object.
- Core::AbstractDataObject * addMatrix ()

  Add a matrix object.
- Core::AbstractDataObject * addSurface ()

  Add a surface object.
- void insertItemAfterSelected ()

  Insert a new array into the data object.
- void insertLeadingItemAfterSelected ()

  Insert a new leading item into the data object.
- void removeSelectedItem ()

  Remove a selected item.
- void removeSelectedLeadingItem ()

  Remove a selected leading item.
- void importDataObjects ()

  Import data objects from a file.

Signals

- void **applied** (Core::DataObjects const &dataObjects, Core::HierarchyTree const &hierarchyDataObjects)

Public Member Functions

- **DataObjectsManager** (Core::DataObjects &&dataObjects, Core::HierarchyTree &&hierarchyDataObjects, QString &lastPath, QSettings &settings, QWidget *parent=nullptr)
- void selectDataObject (int iRow)

  Select a data object by row index.
- void selectDataObjectByID (Core::DataIDType id)

  Select a data object by identifier.
- Core::DataObjects const & **getDataObjects** ()

Private Member Functions

- void createContent ()

  Create all the widgets.
- ads::CDockWidget * createDataTableWidget ()

  Create a tabbed widget to interact with data tables.
- ads::CDockWidget * createHierarchyWidget ()

  Create an object to represent a hierarchy of data objects.
- QLayout * createDialogControls ()

  Create dialog controls.
- void emplaceDataObject (Core::AbstractDataObject *pDataObject)

  Helper function to insert data objects into the manager.
- bool isDataTableModifiable ()

  Helper function to check if it is possible to interact with data object content.
- void importDataObject (QString const &path, QString const &fileName)

  Import a data object from a file.
- void representDataObject (Core::DataIDType id)

  Represent a selected data object according to its type.
- void clearDataObjectRepresentation ()

  Clear a visual data of a data object.

Private Attributes

- QTreeView * **mpTreeDataObjects**
- QTreeView * **mpDataTable**
- Core::DataObjects **mDataObjects**
- Core::HierarchyTree **mHierarchyDataObjects**
- TableModels::TableModelInterface * **mpTableModelInterface** = nullptr
- TableModels::BaseTableModel * **mpBaseTableModel**
- TableModels::MatrixTableModel * **mpMatrixTableModel**
- TableModels::SurfaceTableModel * **mpSurfaceTableModel**
- HierarchyModels::DataObjectsHierarchyModel * **mpTreeDataObjectsModel**

Additional Inherited Members

4.16.1 Detailed Description

Manager to create objects of different types: scalars, vectors, matroces and surfaces.

The documentation for this class was generated from the following files:

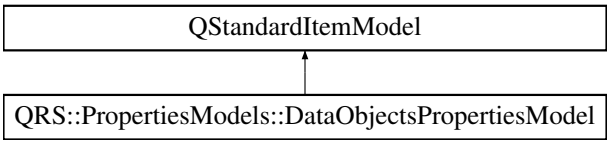
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectsmanager.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectsmanager.cpp

4.17 QRS::PropertiesModels::DataObjectsPropertiesModel Class Reference

Model to represent properties of selected data objects.

`#include <dataobjectspropertiesmodel.h>`

Inheritance diagram for QRS::PropertiesModels::DataObjectsPropertiesModel:



Public Types

- enum **PropertyType** {
  kName , **kType** , **kNumberItems** , **kNumberEntities** ,
  kID , **kNumberChildren** }

Signals

- void **propertyChanged** ()

Public Member Functions

- **DataObjectsPropertiesModel** (QTableView ∗pView, QVector< HierarchyModels::AbstractHierarchyItem ∗ > items)

Private Slots

- void modifyProperty (QStandardItem ∗pChangedProperty)

  Modify the selected property of all items.

Private Member Functions

- void setDirectoryAttributes ()

  Set directory characteristic attributes.
- void setObjectAttributes ()

  Set objects characteristic attributes.
- QList< QStandardItem * > prepareProperty Row (PropertyType type, QString const &title, QVariant const &value, bool isValueEditable) const

  Prepare a row to insert into the table.

Private Attributes

- QVector< HierarchyModels::DataObjectsHierarchyItem * > **mItems**

4.17.1 Detailed Description

Model to represent properties of selected data objects.

The documentation for this class was generated from the following files:

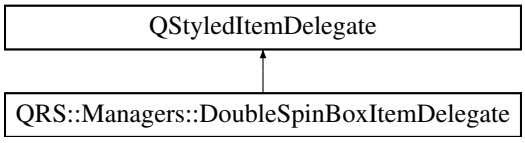
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/dataobjectspropertiesmodel.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/dataobjectspropertiesmodel.cpp

4.18 QRS::Managers::DoubleSpinBoxItemDelegate Class Reference

Class to specify how table values can be edited.

`#include <doublespinboxitemdelegate.h>`

Inheritance diagram for QRS::Managers::DoubleSpinBoxItemDelegate:



Public Member Functions

- **DoubleSpinBoxItemDelegate** (QObject *parent=nullptr)
- QWidget * createEditor (QWidget *parent, const QStyleOptionViewItem &option, const QModelIndex &index) const override

  Create a double value editor.
- void setEditorData (QWidget *pEditor, const QModelIndex &index) const override

  Specify data to show.
- void setModelData (QWidget *pEditor, QAbstractItemModel *pModel, const QModelIndex &index) const override

  Set data to a model.
- void updateEditorGeometry (QWidget *pEditor, const QStyleOptionViewItem &option, const QModelIndex &index) const override

  Set a geometry to render.

4.18.1 Detailed Description

Class to specify how table values can be edited.

The documentation for this class was generated from the following files:

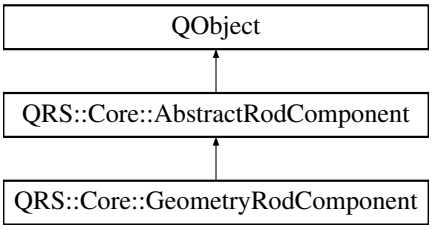
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/doublespinboxitemdelegate.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/doublespinboxitemdelegate.cpp

4.19 QRS::Core::GeometryRodComponent Class Reference

Geometrical configuration of a rod.

`#include <geometryrodcomponent.h>`

Inheritance diagram for QRS::Core::GeometryRodComponent:



Public Member Functions

- **GeometryRodComponent** (QString const &name)
- ∼GeometryRodComponent ()

  Decrease a number of instances while being destroyed.
- AbstractRodComponent ∗ clone () const override

  Clone a geometrical rod component.
- bool isDataComplete () const override

  Check whether the component data is complete.
- void serialize (QDataStream &stream) const override

  Serialize all properties of a geometrical component.
- void deserialize (QDataStream &stream, DataObjects const &dataObjects) override

  Deserialize a geometrical component.
- void resolveReferences (DataObjects const &dataObjects) override

  Resolve references of a geometrical rod component.
- VectorDataObject const ∗ **radiusVector** () const
- MatrixDataObject const ∗ **rotationMatrix** () const
- void **setRadiusVector** (VectorDataObject const ∗pRadiusVector)
- void **setRotationMatrix** (MatrixDataObject const ∗pRotationMatrix)

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- QPointer< VectorDataObject const > **mpRadiusVector**
- QPointer< MatrixDataObject const > **mpRotationMatrix**

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.19.1 Detailed Description

Geometrical configuration of a rod.

The documentation for this class was generated from the following files:

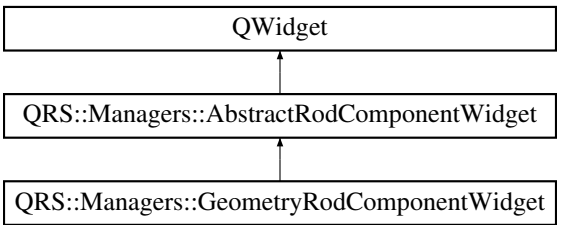
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/geometryrodcomponent.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/geometryrodcomponent.cpp

4.20 QRS::Managers::GeometryRodComponentWidget Class Reference

Widget to construct a geometrical rod component.

`#include <geometryrodcomponentwidget.h>`

Inheritance diagram for QRS::Managers::GeometryRodComponentWidget:



Public Member Functions

- **GeometryRodComponentWidget** (Core::GeometryRodComponent &geometryRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void createContent ()

  Create all the widgets.
- template<typename T >
  void setProperty (Core::AbstractDataObject const *pDataObject, auto setFun)

  Set a property of a rod geometry.

Private Attributes

- Core::GeometryRodComponent & **mGeometryRodComponent**

Additional Inherited Members

4.20.1 Detailed Description

Widget to construct a geometrical rod component.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/geometryrodcomponentwidget.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/geometryrodcomponentwidget.cpp

4.21 QRS::Core::HierarchyNode Class Reference

Hierarchy representative.

`#include <hierarchynode.h>`

Public Types

- enum **NodeType** { **kObject** , **kDirectory** }

Public Member Functions

- HierarchyNode (NodeType type, QVariant value)

  Node constructor.
- void appendChild (HierarchyNode *node)

  Add a child node.
- bool **hasParent** () const
- bool **hasChild** () const
- bool **hasNextSibling** () const
- HierarchyNode * **parent** ()
- HierarchyNode * **firstChild** ()
- HierarchyNode * **nextSibling** ()
- NodeType **type** () const
- QVariant & **value** ()
- HierarchyNode * groupNodes (HierarchyNode *pChildNode)

  Merge two nodes into one entity.
- bool setBefore (HierarchyNode *pSetNode)

  Set a given node before the current one.
- bool setAfter (HierarchyNode *pSetNode)

  Set a given node after the current one.
- quint32 numberChildren () const

  Retrieve a number of children of the current node.

Private Member Functions

- void excludeNodeFromHierarchy ()

  Remove all links to the node.
- bool isSetAllowed (HierarchyNode const ∗pNode) const

  Check whether it is possible to place a given item before or after the current one.
- bool isParentOf (HierarchyNode const ∗pNode) const

  Check whether the current item containes a given node as a child.
- quint32 countNodes (HierarchyNode ∗pNode, quint32 &numNodes) const

  Count all children and siblings of a given node.

Private Attributes

- HierarchyNode ∗ **mpParent** = nullptr
- HierarchyNode ∗ **mpFirstChild** = nullptr
- HierarchyNode ∗ **mpNextSibling** = nullptr
- HierarchyNode ∗ **mpPreviousSibling** = nullptr
- NodeType **mType**
- QVariant **mValue**

Friends

- class **HierarchyTree**

4.21.1 Detailed Description

Hierarchy representative.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchynode.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchynode.cpp

4.22 QRS::Core::HierarchyTree Class Reference

Hierarchy of data objects (n-aray tree)

```
#include <hierarchytree.h>
```

Public Member Functions

- HierarchyTree ()

  Base tree constructor.
- HierarchyTree (HierarchyTree &another)

  Copy constructor.
- HierarchyTree (HierarchyTree &&another)

  Move constructor.
- HierarchyTree (HierarchyNode *pRootNode)

  Take the user defined node as the root.
- HierarchyTree (QDataStream &stream, int numNodes)

  Read a tree from a stream.
- HierarchyTree & operator= (HierarchyTree const &another)

  Copy assignment operator.
- HierarchyTree & operator= (HierarchyTree &&another)

  Move assignment operator.
- ~HierarchyTree ()

  Tree destructor.
- void clear ()

  Delete all nodes except the root node.
- void appendNode (HierarchyNode *pNode)

  Append a node to the root node.
- bool removeNode (HierarchyNode::NodeType type, QVariant const &value)

  Remove a node by type and value.
- void removeNode (HierarchyNode *pNode)

  Remove a node and all its subnodes.
- void changeNodeValue (HierarchyNode::NodeType type, QVariant const &oldValue, QVariant const &new↩ Value)

  Change the value of a node.
- HierarchyNode * **root** ()
- HierarchyTree clone () const

  Clone a tree.
- HierarchyNode * findNode (HierarchyNode *pBaseNode, HierarchyNode::NodeType type, QVariant const &value) const

  Find a node by type and value.
- quint32 size () const

  Get a number of nodes.

Private Member Functions

- HierarchyNode * copyNode (HierarchyNode *pBaseNode, quint32 relativeLevel) const

  Copy a node.
- void removeNodeSiblings (HierarchyNode *pNode)

  Remove all subnodes.
- void printNode (quint32 level, HierarchyNode *pNode, QDebug stream) const

  Print a current node and all its subnodes.
- void writeNode (HierarchyNode *pNode, QDataStream &stream) const

  Print a current node and all its subnodes.

Private Attributes

- HierarchyNode * **mpRootNode** = nullptr

Friends

- QDebug operator<< (QDebug stream, HierarchyTree &tree)

  Print a tree structure.
- QDataStream & operator<< (QDataStream &stream, HierarchyTree const &tree)

  Write a tree structure to a stream.

4.22.1 Detailed Description

Hierarchy of data objects (n-aray tree)

The documentation for this class was generated from the following files:

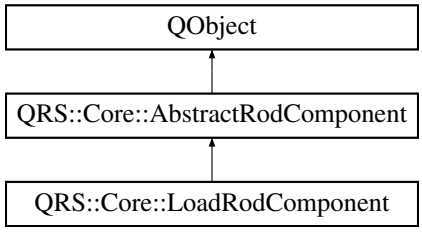
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchytree.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchytree.cpp

4.23 QRS::Core::LoadRodComponent Class Reference

Load applied to a rod.

`#include <loadrodcomponent.h>`

Inheritance diagram for QRS::Core::LoadRodComponent:



Public Types

- enum **LoadType** {
  kNone , **kForcedDisplacements** , **kForcedRotations** , **kPointForce** ,
  kPointMoment , **kPointMass** , **kPointInertiaMoment** , **kPointLinearDamper** ,
  kPointRotationalDamper , **kDistributedForce** , **kDistributedMoment** , **kAerodynamicFlow** ,
  kAcceleration , **kInnerLiquidFlow** , **kDisplacementDamping** , **kRotationDamping** }

Public Member Functions

- **LoadRodComponent** (QString const &name)
- ~LoadRodComponent ()

  Decrease a number of instances while being destroyed.
- AbstractRodComponent * clone () const override

  Clone a rod load.
- bool isDataComplete () const override

  Check whether the component data is complete.
- void serialize (QDataStream &stream) const override

  Serialize all properties of a rod load.
- void deserialize (QDataStream &stream, DataObjects const &dataObjects) override

  Deserialize a rod load.
- void resolveReferences (DataObjects const &dataObjects) override

  Resolve references of a rod load.
- LoadType **loadType** () const
- VectorDataObject const * **directionVector** () const
- ScalarDataObject const * **longitudinalFunction** () const
- ScalarDataObject const * **timeCoefficient** () const
- VectorDataObject const * **timeRotationVector** () const
- DataValueType **multiplier** () const
- bool **isFollowing** () const
- void **setType** (LoadType type)
- void **setDirectionVector** (VectorDataObject const *pDirectionVector)
- void **setLongitudinalFunction** (ScalarDataObject const *pLongitudinalFunction)
- void **setTimeCoefficient** (ScalarDataObject const *pTimeCoefficient)
- void **setTimeRotationVector** (VectorDataObject const *pTimeRotationVector)
- void **setMultiplier** (DataValueType value)
- void **setFollowingState** (bool isFollowing)

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- LoadType **mLoadType** = kNone
- QPointer< VectorDataObject const > **mpDirectionVector**
- QPointer< ScalarDataObject const > **mpLongitudinalFunction**
- QPointer< ScalarDataObject const > **mpTimeCoefficient**
- QPointer< VectorDataObject const > **mpTimeRotationVector**
- DataValueType **mMultiplier** = 1.0
- bool **mIsFollowing** = false

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.23.1 Detailed Description

Load applied to a rod.

The documentation for this class was generated from the following files:

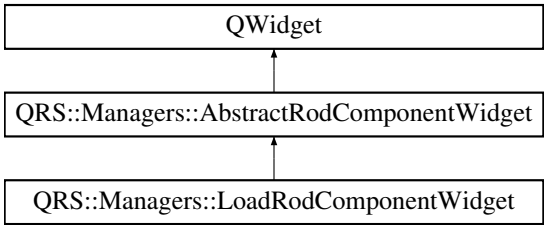
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/loadrodcomponent.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/loadrodcomponent.cpp

4.24 QRS::Managers::LoadRodComponentWidget Class Reference

Widget to construct a load applied to a rod.

`#include <loadrodcomponentwidget.h>`

Inheritance diagram for QRS::Managers::LoadRodComponentWidget:



Public Member Functions

- **LoadRodComponentWidget** (Core::LoadRodComponent &loadRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void createContent ()

  Create all the widgets.
- QLayout * createBaseLayout ()

  Create a layout consisted of widgets to set loading parameters.
- QWidget * createTimeGroup ()

  Create a group of widgets which depend on time.
- QLayout * createLoadTypeLayout ()

  Create a layout consisted of widgets to set a load type and following state.
- QComboBox * createLoadTypeComboBox ()

  Create a combobox to specify a type of load.
- template<typename T >
  void setProperty (Core::AbstractDataObject const *pDataObject, auto setFun)

  Set a property of a rod load.
- void setLoadUnits (Core::LoadRodComponent::LoadType type)

  Set load units to show.

Private Attributes

- Core::LoadRodComponent & **mLoadRodComponent**
- QLabel * **mpLoadRodUnits**

Additional Inherited Members

4.24.1 Detailed Description

Widget to construct a load applied to a rod.

The documentation for this class was generated from the following files:

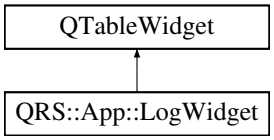
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/loadrodcomponentwidget.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/loadrodcomponentwidget.cpp

4.25 QRS::App::LogWidget Class Reference

Log all the messages sent.

`#include <logwidget.h>`

Inheritance diagram for QRS::App::LogWidget:



Public Member Functions

- **LogWidget** (QWidget *parent=nullptr)
- void log (QtMsgType messageType, const QString &message)

  Represent a message sent.

4.25.1 Detailed Description

Log all the messages sent.

The documentation for this class was generated from the following files:

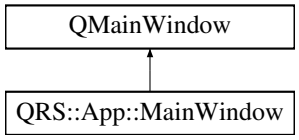
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/logwidget.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/logwidget.cpp

4.26 QRS::App::MainWindow Class Reference

The main window of the program.

`#include <mainwindow.h>`

Inheritance diagram for QRS::App::MainWindow:



Public Member Functions

- **MainWindow** (QWidget *parent=nullptr)
- void openProject (QString const &filePath)

  Open the specific project.
- bool saveProject ()

  Save the current project.

Static Public Attributes

- static LogWidget * **pLogger** = nullptr

Private Slots

- void createProject ()

  Create a project and substitute the current one with it.
- void openProjectDialog ()

  Open a project by using a dialog.
- void openRecentProject ()

  Open the project which was selected from the Recent Projects menu.
- bool saveAsProject ()

  Save the current project under a new name.
- void setModified (bool flag)

  Whenever a project has been modified.
- void representHierarchyProperties (QVector< HierarchyModels::AbstractHierarchyItem * > items)

  Show information about the selected project items.
- void saveSettings ()

  Save the current window settings.
- void restoreSettings ()

  Restore window settings from a file.
- void createDataObjectsManager ()

  Show a manager for designing data objects.
- void createRodComponentsManager ()

  Show a manager to set rod components based on the created data objects.
- void createRodConstructorManager ()

  Show a manager to assemble a rod by using rod components.
- void aboutProgram ()

  Show information about a program.

Private Member Functions

- void initializeWindow ()
  Set a state and geometry of MainWindow.
- void createContent ()
  Create all the widgets and corresponding actions.
- void closeEvent (QCloseEvent *pEvent) override
  Save project and settings before exit.
- ads::CDockWidget * createProjectHierarchyWidget ()
  Create a widget to represent a project hierarchy.
- ads::CDockWidget * createGLWidget ()
  Create an OpenGL widget to render rods.
- ads::CDockWidget * createCodeWidget ()
  Create a widget enables to code.
- ads::CDockWidget * createLogWidget ()
  Create a window for logging.
- ads::CDockWidget * createPropertiesWidget ()
  Create a window to modify properies of selected objercts.
- void setProjectTitle ()
  Show information a name of a project.
- void retrieveRecentProjects ()
  Retrieve recent projects from the settings file.
- void addToRecentProjects ()
  Add the current project to the recent ones.
- void specifyMenuConnections ()
  Set signals and slots for menu actions.
- void specifyProjectConnections ()
  Set signals and slots for a project.
- bool saveProjectChangesDialog ()
  Save project changes.
- bool saveProjectHelper (QString const &filePath)
  Helper method to perform saving of the current project.

Private Attributes

- Ui::MainWindow * **mpUi**
- ads::CDockManager * **mpDockManager**
- QLabel * **mpStatusLabel**
- QTableView * **mpPropertiesWidget**
- HierarchyModels::ProjectHierarchyModel * **mpProjectHierarchyModel** = nullptr
- Managers::ManagersFactory * **mpManagersFactory** = nullptr
- Core::Project * **mpProject**
- QSharedPointer< QSettings > **mpSettings**
- QString **mLastPath**
- QList< QString > **mPathRecentProjects**

4.26.1 Detailed Description

The main window of the program.

The documentation for this class was generated from the following files:

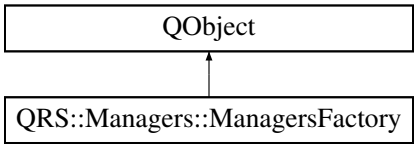
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/mainwindow.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/mainwindow.cpp

4.27 QRS::Managers::ManagersFactory Class Reference

Factory to create managers which utilize and modify project data.

`#include <managersfactory.h>`

Inheritance diagram for QRS::Managers::ManagersFactory:



Public Member Functions

- **ManagersFactory** (Core::Project &project, QString &lastPath, QSettings &settings, QWidget ∗parent)
- bool createManager (AbstractManager::ManagerType type)

  Create a manager according to a given type.
- bool deleteManager (AbstractManager::ManagerType type)

  Destroy a manager by given type.
- AbstractManager ∗ manager (AbstractManager::ManagerType type)

  Retrieve a manager of a given type.

Private Member Functions

- void specifyConnections (DataObjectsManager ∗pManager)

  Specify connections of the manager of data objects.
- void specifyConnections (RodComponentsManager ∗pManager)

  Specify connections of the manager of rod components.

Private Attributes

- Core::Project & **mProject**
- QString & **mLastPath**
- QSettings & **mSettings**
- QWidget ∗ **mpParent**
- std::unordered_map< AbstractManager::ManagerType, AbstractManager ∗ > **mManagers**

4.27.1 Detailed Description

Factory to create managers which utilize and modify project data.

The documentation for this class was generated from the following files:

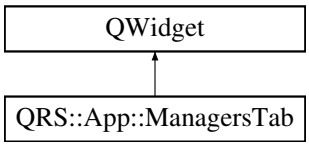
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/managersfactory.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/managersfactory.cpp

4.28 QRS::App::ManagersTab Class Reference

A toolbar consisted of object designers.

`#include <controltabs.h>`

Inheritance diagram for QRS::App::ManagersTab:



Signals

- void **actionDataObjectsTriggered** ()
- void **actionRodPropertiesTriggered** ()
- void **actionRodConstructorTriggered** ()

Public Member Functions

- ManagersTab (QWidget *parent=nullptr)

  Managers tab constructor.

4.28.1 Detailed Description

A toolbar consisted of object designers.

The documentation for this class was generated from the following files:

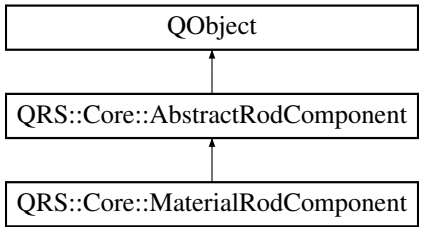
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/controltabs.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/controltabs.cpp

4.29 QRS::Core::MaterialRodComponent Class Reference

Material properties of a rod.

`#include <materialrodcomponent.h>`

Inheritance diagram for QRS::Core::MaterialRodComponent:



Public Member Functions

- **MaterialRodComponent** (QString const &name)
- ∼MaterialRodComponent ()

  Decrease a number of instances while being destroyed.
- AbstractRodComponent ∗ clone () const override

  Clone a material rod component.
- bool isDataComplete () const override

  Check whether the component data is complete.
- void serialize (QDataStream &stream) const override

  Serialize all properties of a material component.
- void deserialize (QDataStream &stream, DataObjects const &dataObjects) override

  Deserialize a material component.
- void resolveReferences (DataObjects const &dataObjects) override

  Resolve references of a material rod component.
- ScalarDataObject const ∗ **elasticModulus** () const
- ScalarDataObject const ∗ **shearModulus** () const
- ScalarDataObject const ∗ **poissonsRatio** () const
- ScalarDataObject const ∗ **density** () const
- void **setElasticModulus** (ScalarDataObject const ∗pElasticModulus)
- void **setShearModulus** (ScalarDataObject const ∗pShearModulus)
- void **setPoissonsRatio** (ScalarDataObject const ∗pPoissonsRatio)
- void **setDensity** (ScalarDataObject const ∗pDensity)

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- QPointer< ScalarDataObject const > **mpElasticModulus**
- QPointer< ScalarDataObject const > **mpShearModulus**
- QPointer< ScalarDataObject const > **mpPoissonsRatio**
- QPointer< ScalarDataObject const > **mpDensity**

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.29.1 Detailed Description

Material properties of a rod.

The documentation for this class was generated from the following files:

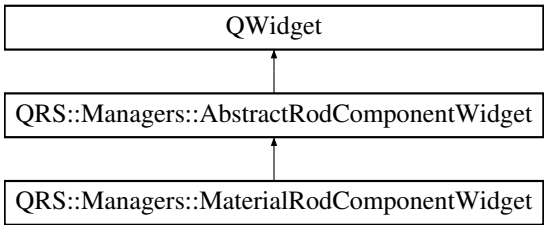
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/materialrodcomponent.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/materialrodcomponent.cpp

4.30 QRS::Managers::MaterialRodComponentWidget Class Reference

Widget to construct a material rod component.

`#include <materialrodcomponentwidget.h>`

Inheritance diagram for QRS::Managers::MaterialRodComponentWidget:



Public Member Functions

- **MaterialRodComponentWidget** (Core::MaterialRodComponent &materialRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void createContent ()

  Create all the widgets.
- QWidget * createModuliGroup ()

  Create a group consisted of widgets to set physical moduli.
- QLayout * createBaseLayout ()

  Create a layout consisted of widgets to set density and Poisson's ratio.
- void setProperty (Core::AbstractDataObject const *pDataObject, auto setFun)

  Set a material property which takes a scalar data object.

Private Attributes

- Core::MaterialRodComponent & **mMaterialRodComponent**

Additional Inherited Members

4.30.1 Detailed Description

Widget to construct a material rod component.

The documentation for this class was generated from the following files:

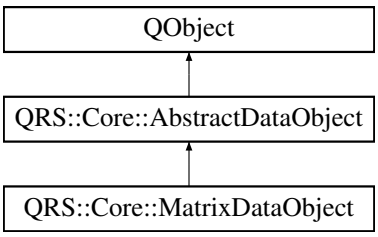
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/materialrodcomponentwidget.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/materialrodcomponentwidget.cpp

4.31 QRS::Core::MatrixDataObject Class Reference

Matrix data object.

`#include <matrixdataobject.h>`

Inheritance diagram for QRS::Core::MatrixDataObject:



Public Member Functions

- MatrixDataObject (QString const &name)
  Construct a matrix data object.
- ∼MatrixDataObject ()
  Decrease a number of instances while being destroyed.
- AbstractDataObject ∗ clone () const override
  Clone a matrix data object.
- DataItemType & addItem (DataValueType key) override
  Insert a new item into MatrixDataObject.
- virtual void import (QTextStream &stream) override
  Import a matrix data object from a file.

Static Public Member Functions

- static quint32 **numberInstances** ()

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.31.1 Detailed Description

Matrix data object.

The documentation for this class was generated from the following files:

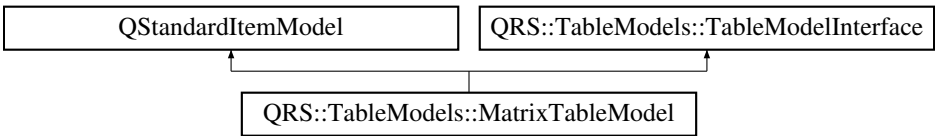
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/matrixdataobject.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/matrixdataobject.cpp

4.32 QRS::TableModels::MatrixTableModel Class Reference

Table model to represent a matrix data object.

`#include <matrixtablemodel.h>`

Inheritance diagram for QRS::TableModels::MatrixTableModel:



Public Member Functions

- **MatrixTableModel** (QWidget ∗parent=nullptr)
- void setDataObject (Core::AbstractDataObject ∗pDataObject)

  Set a data object to represent.
- bool setData (const QModelIndex &indexEdit, const QVariant &value, int role=Qt::EditRole) override

  Set the data acquired from a delegate.
- void insertItemAfterSelected (QItemSelectionModel ∗pSelectionModel) override

  Insert a new item after selected one.
- void **insertLeadingItemAfterSelected** (QItemSelectionModel ∗) override
- void removeSelectedItem (QItemSelectionModel ∗pSelectionModel) override

  Remove an array under selection.
- void **removeSelectedLeadingItem** (QItemSelectionModel ∗) override

Private Member Functions

- void updateContent ()

  Represent all items which a vector data object contains.
- void clearContent ()

  Clear previously created items.

Private Attributes

- Core::AbstractDataObject ∗ **mpDataObject** = nullptr

Additional Inherited Members

4.32.1 Detailed Description

Table model to represent a matrix data object.

The documentation for this class was generated from the following files:

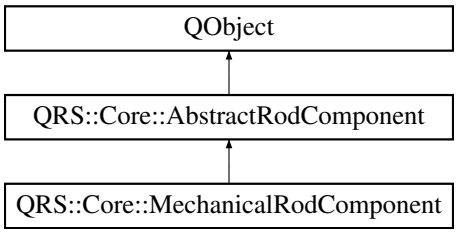
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/matrixtablemodel.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/matrixtablemodel.cpp

4.33 QRS::Core::MechanicalRodComponent Class Reference

Stiffness and mass distributions of a rod.

`#include <mechanicalrodcomponent.h>`

Inheritance diagram for QRS::Core::MechanicalRodComponent:



Public Member Functions

- **MechanicalRodComponent** (QString const &name)
- ~MechanicalRodComponent ()

  Decrease a number of instances while being destroyed.
- AbstractRodComponent * clone () const override

  Clone a geometrical rod component.
- bool **isDataComplete** () const override
- void serialize (QDataStream &stream) const override

  Serialize all properties of a geometrical component.
- void deserialize (QDataStream &stream, DataObjects const &dataObjects) override

  Deserialize a geometrical component.
- void resolveReferences (DataObjects const &dataObjects) override

  Resolve references of a geometrical rod component.
- ScalarDataObject const * **tensionStiffness** () const
- ScalarDataObject const * **torsionalStiffness** () const
- ScalarDataObject const * **bendingStiffnessX** () const
- ScalarDataObject const * **bendingStiffnessY** () const
- ScalarDataObject const * **linearMassDensity** () const
- ScalarDataObject const * **inertiaMassMomentX** () const
- ScalarDataObject const * **inertiaMassMomentY** () const
- ScalarDataObject const * **inertiaMassMomentZ** () const
- ScalarDataObject const * **eccentricityX** () const
- ScalarDataObject const * **eccentricityY** () const
- ScalarDataObject const * **contactDiameter** () const
- void **setTensionStiffness** (ScalarDataObject const *pTensionStiffness)
- void **setTorsionalStiffness** (ScalarDataObject const *pTorsionalStiffness)
- void **setBendingStiffnessX** (ScalarDataObject const *pBendingStiffnessX)
- void **setBendingStiffnessY** (ScalarDataObject const *pBendingStiffnessY)
- void **setLinearMassDensity** (ScalarDataObject const *pLinearMassDensity)
- void **setInertiaMassMomentX** (ScalarDataObject const *pInertiaMassMomentX)
- void **setInertiaMassMomentY** (ScalarDataObject const *pInertiaMassMomentY)
- void **setInertiaMassMomentZ** (ScalarDataObject const *pInertiaMassMomentZ)
- void **setEccentricityX** (ScalarDataObject const *pEccentricityX)
- void **setEccentricityY** (ScalarDataObject const *pEccentricityY)
- void **setContactDiameter** (ScalarDataObject const *pContactDiameter)

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- QPointer< ScalarDataObject const > **mpTensionStiffness**
- QPointer< ScalarDataObject const > **mpTorsionalStiffness**
- QPointer< ScalarDataObject const > **mpBendingStiffnessX**
- QPointer< ScalarDataObject const > **mpBendingStiffnessY**

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.33.1 Detailed Description

Stiffness and mass distributions of a rod.

The documentation for this class was generated from the following files:

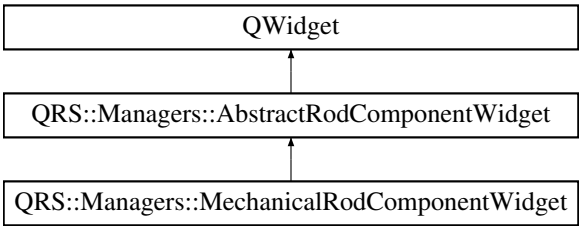
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/mechanicalrodcomponent.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/mechanicalrodcomponent.cpp

4.34 QRS::Managers::MechanicalRodComponentWidget Class Reference

Widget to construct mechanical rod components consisted of stiffness and mass distributions.

`#include <mechanicalrodcomponentwidget.h>`

Inheritance diagram for QRS::Managers::MechanicalRodComponentWidget:



Public Member Functions

- **MechanicalRodComponentWidget** (Core::MechanicalRodComponent &mechanicalRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void createContent ()

  Create all the widgets.
- QWidget * createStiffnessGroup ()

  Create a group consisted of widgets to set stiffness distributions.
- QWidget * createMassGroup ()

  Create a group consisted of widgets to set mass distributions.
- QWidget * createEccentricityGroup ()

  Create a group consisted of widgets to set eccentricity distributions.
- QLayout * createContactDiameterLayout ()

  Create a layout to set a contact diameter.
- void setProperty (Core::AbstractDataObject const *pDataObject, auto setFun)

  Set a mechanical property which takes a scalar data object.

Private Attributes

- Core::MechanicalRodComponent & **mMechanicalRodComponent**

Additional Inherited Members

4.34.1 Detailed Description

Widget to construct mechanical rod components consisted of stiffness and mass distributions.

The documentation for this class was generated from the following files:

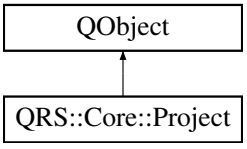
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/mechanicalrodcomponentwidget.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/mechanicalrodcomponentwidget.cpp

4.35 QRS::Core::Project Class Reference

Project class to interact with a created system of rods.

```
#include <project.h>
```

Inheritance diagram for QRS::Core::Project:



Public Slots

- bool save (QString const &dir, QString const &fileName)

  Save a project to a file.
- void setDataObjects (QRS::Core::DataObjects const &dataObjects, QRS::Core::HierarchyTree const &hierarchyDataObjects)

  Substitute current data objects with new ones.
- void setRodComponents (QRS::Core::RodComponents const &rodComponents, QRS::Core::HierarchyTree const &hierarchyRodComponents)

  Substitute current rod components with new ones.

Signals

- void **dataObjectsSubstituted** ()
- void **propertiesDataObjectsChanged** ()
- void **rodComponentsSubstituted** ()
- void **propertiesRodComponentsChanged** ()
- void **projectHierarchyChanged** ()

Public Member Functions

- Project (QString const &name)

  Construct a clean project with the user specified name.
- Project (QString const &path, QString const &fileName)

  Read a project from a file.
- DataIDType **numberDataObjects** () const
- AbstractDataObject * addDataObject (AbstractDataObject::ObjectType type)

  Create a data object with the specified type.
- DataObjects cloneDataObjects () const

  Clone data objects.
- HierarchyTree **cloneHierarchyDataObjects** () const
- DataIDType **numberRodComponents** () const
- AbstractRodComponent * addGeometry ()

  Create a geometrical rod component.
- AbstractRodComponent * addCrossSection (AbstractSectionRodComponent::SectionType sectionType)

  Create a cross section.
- AbstractRodComponent * addMaterial ()

  Add a material rod component.
- AbstractRodComponent * addLoad ()

  Add a rod load.
- AbstractRodComponent * addConstraint ()

  Add a rod constraint.
- AbstractRodComponent * addMechanical ()

  Add a mechanical rod component.
- RodComponents cloneRodComponents () const

  Clone rod components.
- HierarchyTree **cloneHierarchyRodComponents** () const
- QString const & **name** () const
- QString const & **filePath** () const
- void importDataObjects (QString const &path, QString const &fileName)

  Import several data objects from a file.

Static Public Member Functions

- static QString const & **getFileExtension** ()

Private Member Functions

- void emplaceRodComponent (AbstractRodComponent *pRodComponent)

  Emplace a rod component into a project.

Private Attributes

- quint32 mID

  Unique project identifier.
- QString mName

  Project name.
- QString mFilePath

  Path to a file where a project is stored.
- DataObjects mDataObjects

  Data objects.
- HierarchyTree mHierarchyDataObjects

  Hierarchy of data objects.
- RodComponents mRodComponents

  Rod components.
- HierarchyTree mHierarchyRodComponents

  Hierarchy of rod components.

Static Private Attributes

- static const QString skProjectExtension = ".qrs"

  File extensionn.

Friends

- class **QRS::HierarchyModels::ProjectHierarchyModel**
- class **QRS::Managers::ManagersFactory**

4.35.1 Detailed Description

Project class to interact with a created system of rods.

The documentation for this class was generated from the following files:

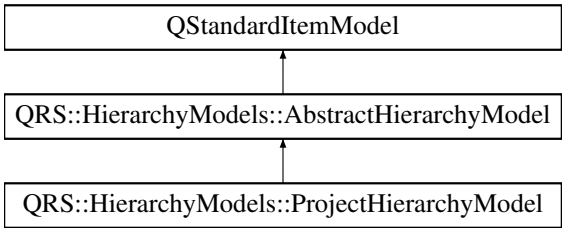
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/project.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/project-base.cpp
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/project-io.cpp

4.36 QRS::HierarchyModels::ProjectHierarchyModel Class Reference

Project hierarchy representative.

`#include <projecthierarchymodel.h>`

Inheritance diagram for QRS::HierarchyModels::ProjectHierarchyModel:



Public Slots

- void validateItemSelection ()

  Check if an item selection is correct and if it is not – correct it.

Signals

- void **selectionValidated** (QVector< QRS::HierarchyModels::AbstractHierarchyItem * > validatedItems)

Public Member Functions

- **ProjectHierarchyModel** (QString const &mimeType, QTreeView *pView=nullptr)
- void updateContent () override

  Update all the content.
- void clearContent () override

  Clear all the items.
- void setProject (Core::Project *pProject)

  Set a project to represent.

Private Member Functions

- DataObjectsHierarchyItem * retrieveDataObjectsItem ()

  Retrieve a representative of data objects.
- RodComponentsHierarchyItem * retrieveRodComponentsItem ()

  Retrieve a representative of rod components.

Private Attributes

- Core::Project * **mpProject** = nullptr

Additional Inherited Members

4.36.1 Detailed Description

Project hierarchy representative.

The documentation for this class was generated from the following files:

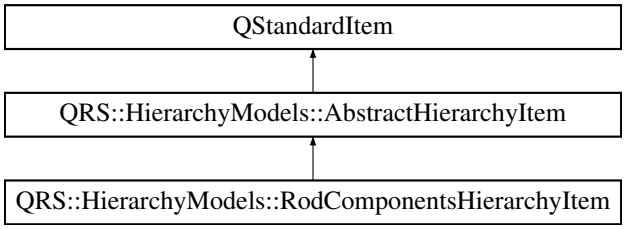
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/projecthierarchymodel.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/projecthierarchymodel.cpp

4.37 QRS::HierarchyModels::RodComponentsHierarchyItem Class Reference

Item to represent a hierarchy of rod components.

`#include <rodcomponentshierarchyitem.h>`

Inheritance diagram for QRS::HierarchyModels::RodComponentsHierarchyItem:



Public Member Functions

- RodComponentsHierarchyItem (Core::RodComponents &rodComponents, Core::HierarchyTree &hierarchy↩ RodComponents, QString const &text="Root", QIcon const &icon=QIcon())

  Create the representative of the structure of rod components.
- RodComponentsHierarchyItem (Core::HierarchyNode *pNode, Core::AbstractRodComponent *pRod↩ Component)

  Construct an item to represent a rod component.
- RodComponentsHierarchyItem (Core::HierarchyNode *pNode)

  Construct an item to represent a directory.
- int **type** () const override

Private Member Functions

- void appendItems (Core::RodComponents &rodComponents, Core::HierarchyNode *pNode)

  Create items based on the position in the tree structure.

Private Attributes

- Core::AbstractRodComponent * **mpRodComponent** = nullptr

Friends

- class **RodComponentsHierarchyModel**

Additional Inherited Members

4.37.1 Detailed Description

Item to represent a hierarchy of rod components.

The documentation for this class was generated from the following files:

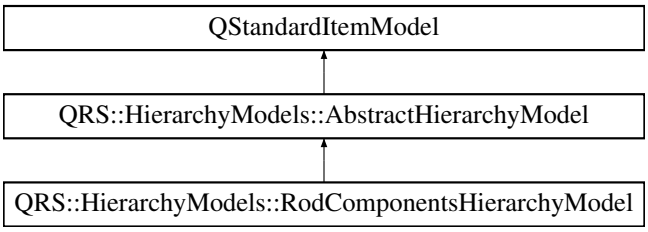
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchyitem.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchyitem.cpp

4.38 QRS::HierarchyModels::RodComponentsHierarchyModel Class Reference

Tree model to represent and modify a hierarchy of rod components.

`#include <rodcomponentshierarchymodel.h>`

Inheritance diagram for QRS::HierarchyModels::RodComponentsHierarchyModel:



Public Slots

- void retrieveSelectedItem ()

  Retrieve a selected rod component.
- void removeSelectedItems ()

  Remove rod components under selection.

Signals

- void **selected** (Core::DataIDType id)
- void **selectionCleared** ()

Public Member Functions

- **RodComponentsHierarchyModel** (Core::RodComponents &rodComponents, Core::HierarchyTree &hierarchyRodComponents, QString const &mimeType, QTreeView *pView=nullptr)
- void updateContent () override

  Update all the content.
- void clearContent () override

  Clear all the items.
- bool isEmpty () const

  Check if there are data objcects to represent.
- void selectItem (int iRow)

  Select an item by row index.

Private Slots

- void renameItem (QStandardItem *pStandardItem)

  Rename a rod component after editing.

Private Attributes

- Core::RodComponents & **mRodComponents**
- Core::HierarchyTree & **mHierarchyRodComponents**

Additional Inherited Members

4.38.1 Detailed Description

Tree model to represent and modify a hierarchy of rod components.

The documentation for this class was generated from the following files:

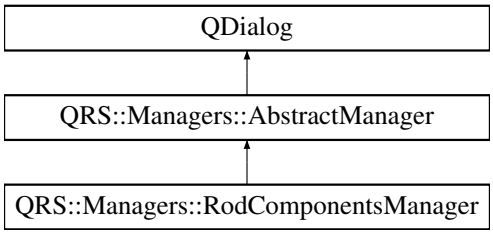
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchymodel.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchymodel.cpp

4.39 QRS::Managers::RodComponentsManager Class Reference

Manager to create rod components, such as a geometry, cross section and force.

`#include <rodcomponentsmanager.h>`

Inheritance diagram for QRS::Managers::RodComponentsManager:



Public Slots

- void apply () override

  Apply all the changes made by user.
- Core::AbstractRodComponent * addGeometry ()

  Add a geometrical component.
- Core::AbstractRodComponent * addSection (Core::AbstractSectionRodComponent::SectionType sectionType)

  Add a cross section.
- Core::AbstractRodComponent * addMaterial ()

  Add a material component.
- Core::AbstractRodComponent * addLoad ()

  Add a rod load.
- Core::AbstractRodComponent * addConstraint ()

  Add a rod constraint.
- Core::AbstractRodComponent * addMechanical ()

  Add a mechanical rod component.
- void resolveRodComponentsReferences ()

  Resolve references of rod components.

Signals

- void **applied** (Core::RodComponents const &rodComponents, Core::HierarchyTree const &hierarchyRodComponents)
- void **editDataObjectRequested** (Core::DataIDType id)

Public Member Functions

- **RodComponentsManager** (Core::DataObjects &dataObjects, Core::HierarchyTree &hiearchyDataObjects, Core::RodComponents &&rodComponents, Core::HierarchyTree &&hierarchyRodComponents, QString &lastPath, QSettings &settings, QWidget *parent=nullptr)
- void selectRodComponent (int iRow)

  Select a rod component by row index.
- void updateDataObjects ()

  Update the representation of data objects.

Private Member Functions

- void createContent ()

  Create all the widgets.
- QLayout * createDialogControls ()

  Create dialog controls.
- ads::CDockWidget * createHierarchyRodComponentsWidget ()

  Create a widget to show a hierarchy of rod components.
- ads::CDockWidget * createConstructorDockWidget ()

  Create a dock widget to contain constructors of rod components.
- ads::CDockWidget * createHierarchyDataObjectsWidget ()

  Create a widget to show a hierarchy of data objects.
- void emplaceRodComponent (Core::AbstractRodComponent *pRodComponent)

Helper function to insert a rod component into the manager.

- void representRodComponent (Core::DataIDType id)

  Represent a selected rod component according to its type.
- void clearRodComponentRepresentation ()

  Delete a widget to represent properties of a rod component.
- QToolBar * createMainToolBar ()

  Create a menu to choose types of components to construct.
- QWidget * makeGeometryToolBar ()

  Create a toolbar to create geometrical components.
- QWidget * makeSectionsToolBar ()

  Create a toolbar to construct cross sections.
- QWidget * makeBoundaryConditionsToolBar ()

  Create a toolbar to construct boundary conditions.
- QWidget * makeLoadingToolBar ()

  Create a toolbar to construct loading.
- QWidget * makeMaterialToolBar ()

  Create a toolbar to construct materials.
- QWidget * makeMechanicalToolBar ()

  Create a toolbar to construct mechanical components.
- QWidget * makeModificationToolBar ()

  Create a toolbar to modify rod components.

Private Attributes

- ads::CDockWidget * **mpComponentDockWidget**
- QTreeView * **mpTreeRodComponents**
- Core::DataObjects & **mDataObjects**
- Core::HierarchyTree & **mHierarchyDataObjects**
- Core::RodComponents **mRodComponents**
- Core::HierarchyTree **mHierarchyRodComponents**
- HierarchyModels::DataObjectsHierarchyModel * **mpTreeDataObjectsModel**
- HierarchyModels::RodComponentsHierarchyModel * **mpTreeRodComponentsModel**

Additional Inherited Members

4.39.1 Detailed Description

Manager to create rod components, such as a geometry, cross section and force.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/rodcomponentsmanager.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/rodcomponentsmanager.cpp

4.40 QRS::Core::Array< T >::Row< U > Struct Template Reference

Proxy class to acquire a row by index.

Public Member Functions

- **Row** (T *pData)
- T & **operator[ ]** (IndexType iCol)
- T const & **operator[ ]** (IndexType iCol) const

Public Attributes

- T * **pRow**

4.40.1 Detailed Description

template<typename T>
template<typename U>
struct QRS::Core::Array< T >::Row< U >

Proxy class to acquire a row by index.

The documentation for this struct was generated from the following file:

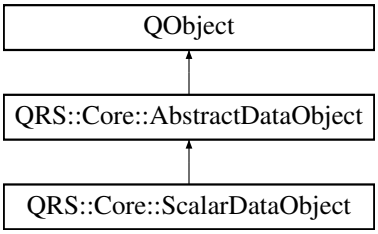
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/array.h

4.41 QRS::Core::ScalarDataObject Class Reference

Scalar data object.

`#include <scalardataobject.h>`

Inheritance diagram for QRS::Core::ScalarDataObject:



Public Member Functions

- ScalarDataObject (QString const &name)
  Construct a scalar data object.
- ~ScalarDataObject ()
  Decrease a number of instances while being destroyed.
- AbstractDataObject * clone () const override
  Clone a scalar data object.
- DataItemType & addItem (DataValueType key) override
  Insert a new item into ScalarDataObject.
- virtual void import (QTextStream &stream) override
  Import a scalar data object from a file.

Static Public Member Functions

- static quint32 **numberInstances** ()

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.41.1 Detailed Description

Scalar data object.

The documentation for this class was generated from the following files:

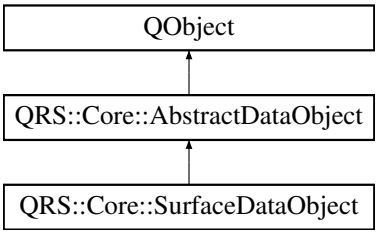
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/scalardataobject.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/scalardataobject.cpp

4.42 QRS::Core::SurfaceDataObject Class Reference

Surface data object.

`#include <surfacedataobject.h>`

Inheritance diagram for QRS::Core::SurfaceDataObject:



Public Member Functions

- SurfaceDataObject (QString const &name)

  Construct a surface data object.
- ~SurfaceDataObject ()

  Decrease a number of instances while being destroyed.
- AbstractDataObject * clone () const override

  Clone a surface data object.
- DataItemType & addItem (DataValueType key) override

  Insert a new item into SurfaceDataObject.
- DataKeyType addLeadingItem (DataValueType key)

  Add a leading item.

- void removeLeadingItem (DataValueType key)

  Remove a leading item.
- bool changeLeadingItemKey (DataKeyType oldKey, DataKeyType newKey)

  Modify a leading item key.
- quint32 **numberLeadingItems** () const
- DataHolder & **getLeadingItems** ()
- void serialize (QDataStream &stream) const override

  Serialize additional data of a surface object.
- virtual void deserialize (QDataStream &stream) override

  Deserialize additional data of a surface object.
- virtual void import (QTextStream &stream) override

  Import a surface data object from a file.

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- DataHolder **mLeadingItems**

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.42.1 Detailed Description

Surface data object.

The documentation for this class was generated from the following files:

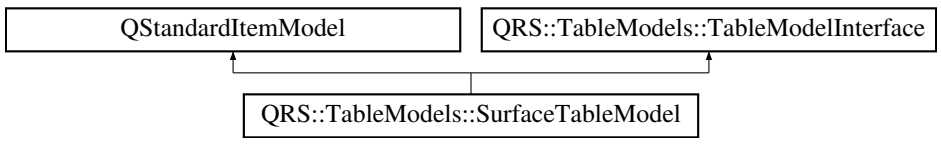
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/surfacedataobject.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/surfacedataobject.cpp

4.43 QRS::TableModels::SurfaceTableModel Class Reference

Table model to represent a surface data object.

`#include <surfacetablemodel.h>`

Inheritance diagram for QRS::TableModels::SurfaceTableModel:



Public Member Functions

- **SurfaceTableModel** (QWidget *parent=nullptr)
- void setDataObject (Core::SurfaceDataObject *pDataObject)

  Set a surface data object to represent.
- bool setData (const QModelIndex &indexEdit, const QVariant &value, int role=Qt::EditRole) override

  Set the data acquired from a delegate.
- void insertItemAfterSelected (QItemSelectionModel *pSelectionModel) override

  Insert a new item after selected one.
- void removeSelectedItem (QItemSelectionModel *pSelectionModel) override

  Remove an array under selection.
- void insertLeadingItemAfterSelected (QItemSelectionModel *pSelectionModel) override

  Add a new leading item after selected one.
- void removeSelectedLeadingItem (QItemSelectionModel *pSelectionModel) override

  Remove a selected leading item.

Private Member Functions

- void updateContent ()

  Represent all items which a data object contains.
- void clearContent ()

  Clear previously created items.

Private Attributes

- Core::SurfaceDataObject * **mpDataObject** = nullptr

Additional Inherited Members

4.43.1 Detailed Description

Table model to represent a surface data object.

The documentation for this class was generated from the following files:

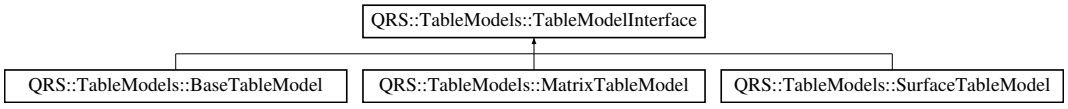
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/surfacetablemodel.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/surfacetablemodel.cpp

4.44 QRS::TableModels::TableModelInterface Class Reference

User interface to add and remove items.

`#include <tablemodelinterface.h>`

Inheritance diagram for QRS::TableModels::TableModelInterface:



Public Member Functions

- virtual void **insertItemAfterSelected** (QItemSelectionModel ∗pSelectionModel)=0
- virtual void **insertLeadingItemAfterSelected** (QItemSelectionModel ∗pSelectionModel)=0
- virtual void **removeSelectedItem** (QItemSelectionModel ∗pSelectionModel)=0
- virtual void **removeSelectedLeadingItem** (QItemSelectionModel ∗pSelectionModel)=0

Static Public Member Functions

- static QStandardItem ∗ makeDoubleItem (double value)

  Helper function to make an item which holds a double value.
- static QList< QStandardItem ∗ > prepareRow (Core::Array< double > const &array, quint32 iRow)

  Helper function to copy a row from an array.
- static QList< QStandardItem ∗ > prepareRow (double const &key, Core::Array< double > const &array, quint32 iRow)

  Helper function to copy a row from an array and associate it with an key.
- static QList< QStandardItem ∗ > prepareRow (QString const &name, Core::Array< double > const &array, quint32 iRow)

  Helper function to copy a row from an array and associate it with a name.
- static QStandardItem ∗ makeLabelItem (QString const &name)

  Helper function to create an item which holds a string and cannot be modfifed.

4.44.1 Detailed Description

User interface to add and remove items.

The documentation for this class was generated from the following files:

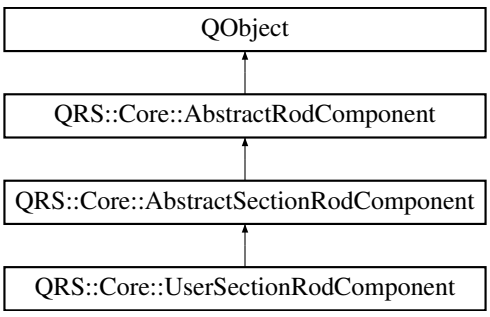
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/tablemodelinterface.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/tablemodelinterface.cpp

4.45 QRS::Core::UserSectionRodComponent Class Reference

Section which properties are defined by user.

`#include <usersectionrodcomponent.h>`

Inheritance diagram for QRS::Core::UserSectionRodComponent:



Public Member Functions

- **UserSectionRodComponent** (QString const &name)
- AbstractRodComponent * clone () const override

  Clone a user-defined cross section.
- bool isDataComplete () const override

  Check if specified data is complete.
- ScalarDataObject const * **area** () const
- ScalarDataObject const * **inertiaMomentTorsional** () const
- ScalarDataObject const * **inertiaMomentX** () const
- ScalarDataObject const * **inertiaMomentY** () const
- ScalarDataObject const * **centerCoordinateX** () const
- ScalarDataObject const * **centerCoordinateY** () const
- void **setArea** (ScalarDataObject const *pArea)
- void **setInertiaMomentTorsional** (ScalarDataObject const *pInertiaMomentTorsional)
- void **setInertiaMomentX** (ScalarDataObject const *pInertiaMomentX)
- void **setInertiaMomentY** (ScalarDataObject const *pInertiaMomentY)
- void **setCenterCoordinateX** (ScalarDataObject const *pCenterCoordinateX)
- void **setCenterCoordinateY** (ScalarDataObject const *pCenterCoordinateY)

Additional Inherited Members

4.45.1 Detailed Description

Section which properties are defined by user.

4.45.2 Member Function Documentation

4.45.2.1 isDataComplete()

```
bool UserSectionRodComponent::isDataComplete ( ) const  [override], [virtual]
```

Check if specified data is complete.

Some of properties may be of zero values to achieve infinite stiffness

Implements QRS::Core::AbstractRodComponent.

The documentation for this class was generated from the following files:

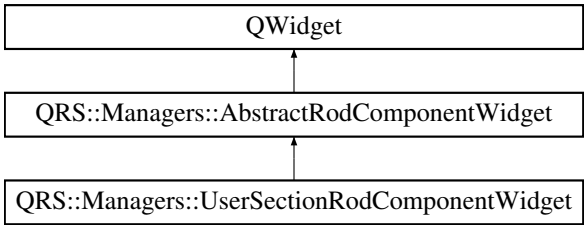
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/usersectionrodcomponent.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/usersectionrodcomponent.cpp

4.46 QRS::Managers::UserSectionRodComponentWidget Class Reference

Widget to construct a user-defined section of a rod.

`#include <usersectionrodcomponentwidget.h>`

Inheritance diagram for QRS::Managers::UserSectionRodComponentWidget:



Public Member Functions

- **UserSectionRodComponentWidget** (Core::UserSectionRodComponent &userSectionRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void createContent ()

  Create all the content.
- QLayout * createAreaLayout ()

  Create an area layout.
- QWidget * createInertiaMomentsGroup ()

  Create a group consisted of widgets to set moments of inertia.
- QWidget * createCenterCoordinatesGroup ()

  Create a group consisted of widgets to set coordinates of the center.
- void setProperty (Core::AbstractDataObject const *pDataObject, auto setFun)

  Set a section property which takes a scalar data object.

Private Attributes

- Core::UserSectionRodComponent & **mUserSectionRodComponent**

Additional Inherited Members

4.46.1 Detailed Description

Widget to construct a user-defined section of a rod.

The documentation for this class was generated from the following files:

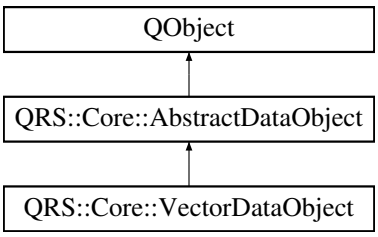
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/usersectionrodcomponentwidget.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/usersectionrodcomponentwidget.cpp

4.47 QRS::Core::VectorDataObject Class Reference

Vector data object.

`#include <vectordataobject.h>`

Inheritance diagram for QRS::Core::VectorDataObject:



Public Member Functions

- VectorDataObject (QString const &name)
  Construct a vector data object.
- ∼VectorDataObject ()
  Decrease a number of instances while being destroyed.
- AbstractDataObject ∗ clone () const override
  Clone a vector data object.
- DataItemType & addItem (DataValueType key) override
  Insert a new item into VectorDataObject.
- virtual void import (QTextStream &stream) override
  Import a vector data object from a file.

Static Public Member Functions

- static quint32 **numberInstances** ()

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.47.1 Detailed Description

Vector data object.

The documentation for this class was generated from the following files:

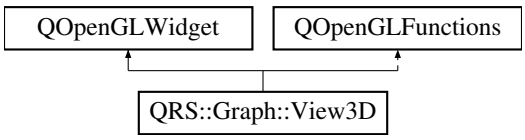
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/vectordataobject.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/vectordataobject.cpp

4.48 QRS::Graph::View3D Class Reference

A widget to represent the resulted rod system.

`#include <view3d.h>`

Inheritance diagram for QRS::Graph::View3D:



Public Member Functions

- **View3D** (QWidget *parent=nullptr)

Protected Member Functions

- void initializeGL () override

  Initialize a graphical scene.
- void paintGL () override

  Render its content.

Private Attributes

- bool **mCore**

4.48.1 Detailed Description

A widget to represent the resulted rod system.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/render/view3d.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/render/view3d.cpp

Date

April 2021

5.9 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/abstractdataobject.h File Reference

Declaration of the AbstractDataObject class.

```
#include <QObject>
#include <QString>
#include <QDataStream>
#include <map>
#include "array.h"
#include "aliasdata.h"
```

Classes

- class QRS::Core::AbstractDataObject

  Data object which is designied in the way to be represented in a table easily.

Typedefs

- using **QRS::Core::DataItemType** = Array< DataValueType >
- using **QRS::Core::DataHolder** = std::map< DataKeyType, DataItemType >

Functions

- QDataStream & QRS::Core::operator<< (QDataStream &stream, AbstractDataObject const &obj)

  Print a data object to a stream.

5.9.1 Detailed Description

Declaration of the AbstractDataObject class.

Author

Pavel Lakiza

Date

July 2021

5.10 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/abstractrodcomponent.cpp File Reference

Definition of the AbstractRodComponent class.

```
#include "abstractrodcomponent.h"
#include "abstractdataobject.h"
```

5.10.1 Detailed Description

Definition of the AbstractRodComponent class.

Author

Pavel Lakiza

Date

July 2021

5.11 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/abstractrodcomponent.h File Reference

Declaration of the AbstractRodComponent class.

```
#include <QObject>
#include <QString>
#include <QDataStream>
#include "aliasdataset.h"
```

Classes

- class QRS::Core::AbstractRodComponent

  Component of the rod structure which characterizes one of its properties.

Functions

- QDataStream & QRS::Core::operator<< (QDataStream &stream, AbstractRodComponent const &component)

  Print a rod component to a stream.

5.11.1 Detailed Description

Declaration of the AbstractRodComponent class.

Author

Pavel Lakiza

Date

July 2021

5.12 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/abstractsectionrodcomponent.cpp File Reference

Definition of the AbstractSectionRodComponent class.

```
#include "abstractsectionrodcomponent.h"
#include "core/scalardataobject.h"
```

5.12.1 Detailed Description

Definition of the AbstractSectionRodComponent class.

Author

Pavel Lakiza

Date

July 2021

5.13 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/abstractsectionrodcomponent.h File Reference

Declaration of the AbstractSectionRodComponent class.

```
#include <QPointer>
#include "abstractrodcomponent.h"
```

Classes

- class QRS::Core::AbstractSectionRodComponent

  General cross section of a rod.

5.13.1 Detailed Description

Declaration of the AbstractSectionRodComponent class.

Author

Pavel Lakiza

Date

July 2021

5.14 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/aliasdata.h File Reference

Specification of data types used in a project.

```
#include <QtGlobal>
```

Typedefs

- using **QRS::Core::DataValueType** = double
- using **QRS::Core::DataKeyType** = double
- using **QRS::Core::DataIDType** = quint64

5.14.1 Detailed Description

Specification of data types used in a project.

Author

Pavel Lakiza

Date

May 2021

5.15 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/aliasdataset.h File Reference

Specification of types of datasets used in a project.

```
#include <unordered_map>
#include "aliasdata.h"
```

Typedefs

- using **QRS::Core::DataObjects** = std::unordered_map< DataIDType, AbstractDataObject * >
- using **QRS::Core::RodComponents** = std::unordered_map< DataIDType, AbstractRodComponent * >

5.15.1 Detailed Description

Specification of types of datasets used in a project.

Author

Pavel Lakiza

Date

June 2021

5.16 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/array.cpp File Reference

Implementation of the Array class.

```
#include "array.h"
```

5.16.1 Detailed Description

Implementation of the Array class.

Author

Pavel Lakiza

Date

March 2021

5.17 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/array.h File Reference

Declaration of the Array class.

```
#include <QDebug>
```

Classes

- class QRS::Core::Array< T >
  Numerical array class.
- struct QRS::Core::Array< T >::Row< U >
  Proxy class to acquire a row by index.

Typedefs

- using **QRS::Core::IndexType** = quint32

Functions

- template<typename K >
  QDebug QRS::Core::operator<< (QDebug stream, Array< K > &array)
  Print all array values using the matrix format.
- template<typename K >
  QDataStream & QRS::Core::operator<< (QDataStream &stream, Array< K > const &array)
  Write an array to a stream.
- template<typename K >
  QDataStream & QRS::Core::operator>> (QDataStream &stream, Array< K > &array)
  Read an array from a stream.

5.17.1 Detailed Description

Declaration of the Array class.

Author

```

5.24.1 Detailed Description

Implementation of the HierarchyTree class.

Author

Pavel Lakiza

Date

June 2021

5.25 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/hierarchytree.h File Reference

Declaration of the HierarchyTree class.

```
#include <QDebug>
#include "hierarchynode.h"
```

Classes

- class QRS::Core::HierarchyTree

  Hierarchy of data objects (n-aray tree)

Functions

- QDebug QRS::Core::operator<< (QDebug stream, HierarchyTree &tree)

  Print a tree structure.
- QDataStream & QRS::Core::operator<< (QDataStream &stream, HierarchyTree const &tree)

  Write a tree structure to a stream.

5.25.1 Detailed Description

Declaration of the HierarchyTree class.

Author

Pavel Lakiza

Date

June 2021

5.26 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/loadrodcomponent.cpp File Reference

Definition of the LoadRodComponent class.

```

Declaration of the MechanicalRodComponent class.

```
#include <QPointer>
#include "abstractrodcomponent.h"
```

Classes

- class QRS::Core::MechanicalRodComponent

  Stiffness and mass distributions of a rod.

5.33.1 Detailed Description

Declaration of the MechanicalRodComponent class.

Author

Pavel Lakiza

Date

July 2021

5.34 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/project-base.cpp File Reference

Implementation of the Project class.

```
#include <QRandomGenerator>
#include "project.h"
#include "scalardataobject.h"
#include "vectordataobject.h"
#include "matrixdataobject.h"
#include "surfacedataobject.h"
#include "geometryrodcomponent.h"
#include "usersectionrodcomponent.h"
#include "materialrodcomponent.h"
#include "loadrodcomponent.h"
#include "constraintrodcomponent.h"
#include "mechanicalrodcomponent.h"
```

Functions

- template<typename T >
  void clearDataMap (std::unordered_map< DataIDType, T * > &dataMap)

  Helper function to clear a map consisted of data pointers.
- AbstractDataObject * createDataObject (AbstractDataObject::ObjectType type)

  Helper function to create DataObject instance by a type and name.

5.34.1 Detailed Description

Implementation of the Project class.

Author

Pavel Lakiza

Date

June 2021

Implementation of the methods to operate with data objects, components and rods

5.35 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/project-io.cpp File Reference

Implementation of the Project class.

```
#include <QFileInfo>
#include <QDir>
#include <QDataStream>
#include <QDateTime>
#include "project.h"
#include "scalardataobject.h"

#include "geometryrodcomponent.h"
#include "usersectionrodcomponent.h"
#include "materialrodcomponent.h"
#include "loadrodcomponent.h"
#include "constraintrodcomponent.h"
#include "mechanicalrodcomponent.h"
#include "utilities.h"
```

Functions

- void readDataObjects (QDataStream &inputStream, DataObjects &dataObjects)

  Helper function to read a set of data objects from a stream.
- void readRodComponents (QDataStream &inputStream, DataObjects const &dataObjects, RodComponents &rodComponents)

  Helper function to read rod components from a stream.
- void readHierarchyTree (QDataStream &inputStream, HierarchyTree &hierarchy)

  Helper function to read a hierarchial tree from a stream.

5.35.1 Detailed Description

Implementation of the Project class.

Author

Pavel Lakiza

Date

June 2021

Implementation of the methods to operate with input/output streams

5.36 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/core/project.h File Reference

```

Classes

- class QRS::Managers::DoubleSpinBoxItemDelegate
  Class to specify how table values can be edited.

5.61.1 Detailed Description

Declaration of the DoubleSpinBoxItemDelegate class.

Author

Pavel Lakiza

Date

July 2021

5.62 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/managers/geometryrodcomponentwidget.cpp File Reference

Definiton of the GeometryComponentWidget class.

```
#include <QGridLayout>
#include <QSpacerItem>
#include <QLabel>
#include "geometryrodcomponentwidget.h"
#include "dataobjectlineedit.h"
#include "core/geometryrodcomponent.h"
#include "core/vectordataobject.h"
#include "core/matrixdataobject.h"
```

5.62.1 Detailed Description

Definiton of the GeometryComponentWidget class.

Author

Pavel Lakiza

Date

July 2021

5.63 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/managers/geometryrodcomponentwidget.h File Reference

Declaration of the GeometryComponentWidget class.

```
#include "abstractrodcomponentwidget.h"
```

Classes

- class QRS::Managers::GeometryRodComponentWidget

  Widget to construct a geometrical rod component.

5.63.1 Detailed Description

Declaration of the GeometryComponentWidget class.

Author

Pavel Lakiza

Date

July 2021

5.64 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/managers/loadrodcomponentwidget.cpp File Reference

Definition of the LoadRodComponentWidget class.

```
#include <QVBoxLayout>
#include <QLabel>
#include <QComboBox>
#include <QGroupBox>
#include <QDoubleSpinBox>
#include <QCheckBox>
#include "loadrodcomponentwidget.h"
#include "dataobjectlineedit.h"
#include "core/scalardataobject.h"
#include "core/vectordataobject.h"
```

5.64.1 Detailed Description

Definition of the LoadRodComponentWidget class.

Author

Pavel Lakiza

Date

July 2021

5.65 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/managers/loadrodcomponentwidget.h File Reference

Declaration of the LoadRodComponentWidget class.

```
#include "abstractrodcomponentwidget.h"
#include "core/loadrodcomponent.h"
```

Classes

- class QRS::Managers::LoadRodComponentWidget
  Widget to construct a load applied to a rod.

5.65.1 Detailed Description

Declaration of the LoadRodComponentWidget class.

Author

Pavel Lakiza

Date

July 2021

5.66 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/managers/managersfactory.cpp File Reference

Definition of the ManagersFactory class.

```

#include "models/hierarchy/dataobjectshierarchymodel.h"
#include "models/hierarchy/rodcomponentshierarchymodel.h"
```

Functions

- QWidget * addToolbarHeader (QToolBar *pToolBar, QString const &name)

  Helper function to add the header to a toolbar.
- AbstractRodComponentWidget * createRodComponentWidget (AbstractRodComponent *pRodComponent, ads::CDockWidget *pDockWidget)

  Create an appropriate constructor of a rod component.

Variables

- QSize const **skToolBarIconSize** = QSize(27, 27)
- QString const **skDataObjectsMimeType** = "rodcomponentsmanager/dataobjectshierarchy"

5.72.1 Detailed Description

Definition of the RodComponentsManager class.

Author

Pavel Lakiza

Date

May 2021

5.73 /home/qinterfly/Library/Projects/Current/QRod↩ Systems/src/managers/rodcomponentsmanager.h File Reference
