Chapter 1

Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

QRS::Core::Array< T >	22
QRS::Core::HierarchyNode	38
QRS::Core::HierarchyTree	39
QDialog	
QRS::Managers::AbstractManager	15
QRS::Managers::DataObjectsManager	32
QRS::Managers::RodComponentsManager	61
QLineEdit	
QRS::Managers::DataObjectLineEdit	28
QMainWindow	
QRS::App::MainWindow	45
QObject	
QRS::Core::AbstractDataObject	11
QRS::Core::MatrixDataObject	51
QRS::Core::ScalarDataObject	64
QRS::Core::SurfaceDataObject	65
QRS::Core::VectorDataObject	71
QRS::Core::AbstractRodComponent	18
QRS::Core::AbstractSectionRodComponent	20
QRS::Core::UserSectionRodComponent	68
QRS::Core::ConstraintRodComponent	25
QRS::Core::GeometryRodComponent	36
QRS::Core::LoadRodComponent	41
QRS::Core::MaterialRodComponent	48
QRS::Core::MechanicalRodComponent	53
QRS::Core::Project	55
QRS::Managers::ManagersFactory	47
QOpenGLFunctions	
QRS::Graph::View3D	72
QOpenGLWidget	
QRS::Graph::View3D	72
QStandardItem	
QRS::HierarchyModels::AbstractHierarchyItem	13
QRS::HierarchyModels::DataObjectsHierarchyItem	29
QRS::HierarchyModels::RodComponentsHierarchyItem	59

QStandardItemModel	
QRS::HierarchyModels::AbstractHierarchyModel	14
QRS::HierarchyModels::DataObjectsHierarchyModel	30
QRS::HierarchyModels::ProjectHierarchyModel	58
QRS::HierarchyModels::RodComponentsHierarchyModel	60
QRS::PropertiesModels::AbstractPropertiesModel	17
QRS::PropertiesModels::DataObjectsPropertiesModel	34
QRS::TableModels::BaseTableModel	23
QRS::TableModels::MatrixTableModel	52
QRS::TableModels::SurfaceTableModel	66
QStyledItemDelegate	
QRS::Managers::ConstraintItemDelegate	24
QRS::Managers::DoubleSpinBoxItemDelegate	35
QTableWidget	
QRS::App::LogWidget	44
QWidget	
QRS::App::ManagersTab	48
QRS::Managers::AbstractRodComponentWidget	19
QRS::Managers::ConstraintRodComponentWidget	27
QRS::Managers::GeometryRodComponentWidget	37
QRS::Managers::LoadRodComponentWidget	43
QRS::Managers::MaterialRodComponentWidget	50
QRS::Managers::MechanicalRodComponentWidget	54
QRS::Managers::UserSectionRodComponentWidget	70
QRS::Core::Array< T >::Row< U >	63
QRS::TableModels::TableModelInterface	67
QRS::TableModels::BaseTableModel	23
QRS::TableModels::MatrixTableModel	52
QRS::TableModels::SurfaceTableModel	66

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

QRS::Core::AbstractDataObject	11
Data object which is designed in the way to be represented in a table easily	
QRS::HierarchyModels::AbstractHierarchyItem	13
Item to represent a hierarchy of elements of the same type	
QRS::HierarchyModels::AbstractHierarchyModel	14
Hierarchy model which enables one to drag and drop elements of the same type	
QRS::Managers::AbstractManager	15
Abstract manager to create objects of different types	
QRS::PropertiesModels::AbstractPropertiesModel	17
Model to represent general properties	
QRS::Core::AbstractRodComponent	18
Component of the rod structure which characterizes one of its properties	
QRS::Managers::AbstractRodComponentWidget	19
Widget to construct rod components of different types	
QRS::Core::AbstractSectionRodComponent	20
General cross section of a rod	
QRS::Core::Array< T >	22
Numerical array class	
QRS::TableModels::BaseTableModel	23
Table model to represent either a scalar or vector data object	
QRS::Managers::ConstraintItemDelegate	24
Class to specify how options of a constraint can be edited	
QRS::Core::ConstraintRodComponent	25
Component to restrict movements of a rod	
QRS::Managers::ConstraintRodComponentWidget	27
Widget to construct constraints of a rod	
QRS::Managers::DataObjectLineEdit	28
Line edit widget to hold a pointer to a data object	
QRS::HierarchyModels::DataObjectsHierarchyItem	29
Item to represent a hierarchy of data objects	
QRS::HierarchyModels::DataObjectsHierarchyModel	30
Tree model to represent and modify a hierarchy of data objects	
QRS::Managers::DataObjectsManager	32
Manager to create objects of different types: scalars, vectors, matrices and surfaces	
QRS::PropertiesModels::DataObjectsPropertiesModel	34
Model to represent properties of selected data objects	

QRS::Managers::DoubleSpinBoxItemDelegate	
Class to specify how table values can be edited	35
QRS::Core::GeometryRodComponent	
Geometrical configuration of a rod	36
QRS::Managers::GeometryRodComponentWidget	
Widget to construct a geometrical rod component	37
QRS::Core::HierarchyNode	
Hierarchy representative	38
QRS::Core::HierarchyTree	
Hierarchy of data objects (n-array tree)	39
QRS::Core::LoadRodComponent	
Load applied to a rod	41
QRS::Managers::LoadRodComponentWidget	
Widget to construct a load applied to a rod	43
QRS::App::LogWidget	
Log all the messages sent	44
QRS::App::MainWindow	
The main window of the program	45
QRS::Managers::ManagersFactory	
Factory to create managers which utilize and modify project data	47
QRS::App::ManagersTab	
A toolbar consisted of object designers	48
QRS::Core::MaterialRodComponent	
Material properties of a rod	48
QRS::Managers::MaterialRodComponentWidget	
Widget to construct a material rod component	50
QRS::Core::MatrixDataObject	
Matrix data object	51
QRS::TableModels::MatrixTableModel	
Table model to represent a matrix data object	52
QRS::Core::MechanicalRodComponent	
Stiffness and mass distributions of a rod	53
QRS::Managers::MechanicalRodComponentWidget	
Widget to construct mechanical rod components consisted of stiffness and mass distributions	54
QRS::Core::Project	
Project class to interact with a created system of rods	55
QRS::HierarchyModels::ProjectHierarchyModel	
Project hierarchy representative	58
QRS::HierarchyModels::RodComponentsHierarchyItem	
Item to represent a hierarchy of rod components	59
QRS::HierarchyModels::RodComponentsHierarchyModel	
Tree model to represent and modify a hierarchy of rod components	60
QRS::Managers::RodComponentsManager	
Manager to create rod components, such as a geometry, cross section and force	61
QRS::Core::Array< T >::Row< U >	
Proxy class to acquire a row by index	63
QRS::Core::ScalarDataObject	
Scalar data object	64
QRS::Core::SurfaceDataObject	
Surface data object	65
QRS::TableModels::SurfaceTableModel	
Table model to represent a surface data object	66
QRS::TableModels::TableModelInterface	
User interface to add and remove items	67
QRS::Core::UserSectionRodComponent	
Section which properties are defined by user	68
QRS::Managers::UserSectionRodComponentWidget	
Widget to construct a user-defined section of a rod	70

QRS::Core::VectorDataObject	
Vector data object	71
QRS::Graph::View3D	
A widget to represent the resulted rod system	72

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

/home/qinterfly/Library/Projects/Current/QRodSystems/src/central/ controltabs.cpp	
Implementation of the ControlTabs class	73
/home/qinterfly/Library/Projects/Current/QRodSystems/src/central/ controltabs.h	
Declaration of the ControlTabs class	73
/home/qinterfly/Library/Projects/Current/QRodSystems/src/central/ logwidget.cpp	
Implementation of the LogWidget class	74
/home/qinterfly/Library/Projects/Current/QRodSystems/src/central/ logwidget.h	
Declaration of the LogWidget class	75
/home/qinterfly/Library/Projects/Current/QRodSystems/src/central/ mainwindow.cpp	
Implementation of the MainWindow class	75
/home/qinterfly/Library/Projects/Current/QRodSystems/src/central/ mainwindow.h	
Declaration of the MainWindow class	76
/home/qinterfly/Library/Projects/Current/QRodSystems/src/central/ uiconstants.h	
Common graphical constants shared between several windows	77
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ abstractdataobject.cpp	
Implementation of the AbstractDataObject class	77
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ abstractdataobject.h	
Declaration of the AbstractDataObject class	78
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ abstractrodcomponent.cpp	
Definition of the AbstractRodComponent class	78
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ abstractrodcomponent.h	
Declaration of the AbstractRodComponent class	79
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ abstractsectionrodcomponent.cpp	
Definition of the AbstractSectionRodComponent class	80
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ abstractsectionrodcomponent.h	
Declaration of the AbstractSectionRodComponent class	80
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ aliasdata.h	
Specification of data types used in a project	81
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ aliasdataset.h	
Specification of types of datasets used in a project	81
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ array.cpp	
Implementation of the Array class	82
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ array.h	
Declaration of the Array class	82
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/ constraintrodcomponent.cpp	
Definition of the ConstraintRodComponent class	83

/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/constraintrodcomponent.h	
Declaration of the ConstraintRodComponent class	83
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/geometryrodcomponent.cpp	
Definition of the GeometryRodComponent class	84
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/geometryrodcomponent.h	
Declaration of the GeometryRodComponent class	84
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchynode.cpp	
Implementation of the HierarchyNode class	85
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchynode.h	
Declaration of the HierarchyNode class	85
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchytree.cpp	
Implementation of the HierarchyTree class	86
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchytree.h	
Declaration of the HierarchyTree class	86
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/loadrodcomponent.cpp	
Definition of the LoadRodComponent class	87
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/loadrodcomponent.h	
Declaration of the LoadRodComponent class	87
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/materialrodcomponent.cpp	
Definition of the MaterialRodComponent class	88
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/materialrodcomponent.h	
Declaration of the MaterialRodComponent class	88
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/matrixdataobject.cpp	
Implementation of the MatrixDataObject class	89
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/matrixdataobject.h	
Declaration of the MatrixDataObject class	89
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/mechanicalrodcomponent.cpp	
Definition of the MechanicalRodComponent class	90
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/mechanicalrodcomponent.h	
Declaration of the MechanicalRodComponent class	90
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/project-base.cpp	
Implementation of the Project class	91
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/project-io.cpp	
Implementation of the Project class	92
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/project.h	
Declaration of the Project class	93
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/scalardataobject.cpp	
Implementation of the ScalarDataObject class	94
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/scalardataobject.h	
Declaration of the ScalarDataObject class	94
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/surfacedataobject.cpp	
Implementation of the SurfaceDataObject class	95
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/surfacedataobject.h	
Declaration of the SurfaceDataObject class	95
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/usersectionrodcomponent.cpp	
Definition of the UserSectionRodComponent class	96
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/usersectionrodcomponent.h	
Declaration of the UserSectionRodComponent class	96
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/utilities.cpp	
Implementation of utilities	97
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/utilities.h	
Declaration of utilities	97
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/vectordataobject.cpp	
Implementation of the VectorDataObject class	98
/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/vectordataobject.h	
Declaration of the VectorDataObject class	98
/home/qinterfly/Library/Projects/Current/QRodSystems/src/main/main.cpp	
The startup function	99

/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractmanager.cpp	
Definition of the AbstractManager class	99
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractmanager.h	
Declaration of the AbstractManager class	100
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractrodcomponentwidget.cpp	
Definition of the AbstractRodComponentWidget class	100
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractrodcomponentwidget.h	
Declaration of the AbstractRodComponentWidget class	101
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintitemdelegate.cpp	
Definition of the ComboBoxItemDelegate class	101
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintitemdelegate.h	
Declaration of the ComboBoxItemDelegate class	102
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintrodcomponentwidget.cpp	
Definition of the ConstraintRodComponentWidget class	102
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintrodcomponentwidget.h	
Declaration of the ConstraintRodComponentWidget class	103
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectlineedit.cpp	
Definition of the DataPointerLineEdit class	103
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectlineedit.h	
Declaration of the DataPointerLineEdit class	104
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectsmanager.cpp	
Implementation of the DataObjectsManager class	105
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectsmanager.h	
Declaration of the DataObjectsManager class	106
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/doublespinboxitemdelegate.cpp	
Definition of the DoubleSpinBoxItemDelegate class	106
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/doublespinboxitemdelegate.h	
Declaration of the DoubleSpinBoxItemDelegate class	107
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/geometryrodcomponentwidget.cpp	
Definiton of the GeometryComponentWidget class	107
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/geometryrodcomponentwidget.h	
Declaration of the GeometryComponentWidget class	108
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/loadrodcomponentwidget.cpp	
Definition of the LoadRodComponentWidget class	108
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/loadrodcomponentwidget.h	
Declaration of the LoadRodComponentWidget class	109
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/managersfactory.cpp	
Definition of the ManagersFactory class	109
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/managersfactory.h	
Declaration of the ManagersFactory class	110
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/materialrodcomponentwidget.cpp	
Definition of the MaterialRodComponentWidget class	111
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/materialrodcomponentwidget.h	
Declaration of the MaterialRodComponentWidget class	111
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/mechanicalrodcomponentwidget.cpp	
Definition of the MechanicalRodComponentWidget class	112
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/mechanicalrodcomponentwidget.h	
Declaration of the MechanicalRodComponentWidget class	112
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/rodcomponentsmanager.cpp	
Definition of the RodComponentsManager class	113
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/rodcomponentsmanager.h	
Declaration of the RodComponentsManager class	114
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/usersectionrodcomponentwidget.cpp	
Definition of the UserSectionRodComponentWidget class	114
/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/usersectionrodcomponentwidget.h	
Declaration of the UserSectionRodComponentWidget class	115
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/abstracthierarchyitem.cpp	
Definition of the AbstractHierarchyItem class	115

/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/abstracthierarchyitem.h	
Declaration of the AbstractHierarchyItem class	116
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/abstracthierarchymodel.cpp	
Definition of the AbstractHierarchyModel class	116
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/abstracthierarchymodel.h	
Declaration of the AbstractHierarchyModel class	117
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchyitem.cpp	
Definition of the DataObjectsHierarchyItem class	117
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchyitem.h	
Declaration of the DataObjectsHierarchyItem class	118
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchymodel.cpp	
Definition of the DataObjectsHierarchyModel class	118
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchymodel.h	
Declaration of the DataObjectsHierarchyModel class	119
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/projecthierarchymodel.cpp	
Definition of the ProjectHierarchyModel class	119
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/projecthierarchymodel.h	
Declaration of the ProjectHierarchyModel class	120
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchyitem.cpp	
Definition of the RodComponentsHierarchyItem class	120
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchyitem.h	
Declaration of the RodComponentsHierarchyItem class	121
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchymodel.cpp	
Definition of the RodComponentsHierarchyModel class	122
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchymodel.h	
Declaration of the RodComponentsHierarchyModel class	122
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/abstractpropertiesmodel.cpp	
Definition of the AbstractPropertiesModel class	123
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/abstractpropertiesmodel.h	
Declaration of the AbstractPropertiesModel class	123
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/dataobjectspropertiesmodel.cpp	
Definition of the DataObjectsPropertiesModel class	124
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/dataobjectspropertiesmodel.h	
Declaration of the DataObjectsPropertiesModel class	124
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/basetablemodel.cpp	
Implementation of the BaseTableModel class	125
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/basetablemodel.h	
Declaration of the BaseTableModel class	125
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/matrixtablemodel.cpp	
Implementation of the MatrixTableModel class	126
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/matrixtablemodel.h	
Declaration of the MatrixTableModel class	126
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/surfacetablemodel.cpp	
Implementation of the SurfaceTableModel class	127
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/surfacetablemodel.h	
Declaration of the SurfaceTableModel class	127
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/tablemodelinterface.cpp	
Implementation of static functions of TableModelInterface	128
/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/tablemodelinterface.h	
Declaration of the TableModelInterface	128
/home/qinterfly/Library/Projects/Current/QRodSystems/src/render/view3d.cpp	
Implementation of the View3D class	129
/home/qinterfly/Library/Projects/Current/QRodSystems/src/render/view3d.h	
Declaration of the View3D class	129

Chapter 4

Class Documentation

4.1 QRS::Core::AbstractDataObject Class Reference

Data object which is designed in the way to be represented in a table easily.

```
#include <abstractdataobject.h>
```

Inheritance diagram for QRS::Core::AbstractDataObject:

Public Types

- enum **ObjectType** { **kScalar** , **kVector** , **kMatrix** , **kSurface** }

Public Member Functions

- **AbstractDataObject** (ObjectType type, QString const &name)
Base constructor.
- virtual **AbstractDataObject** * **clone** () const =0
- virtual **DataItemType** & **addItem** (DataKeyType key)=0
- void **removeItem** (DataValueType key)
Remove an entity with the specified key.
- bool **changeItemKey** (DataKeyType oldKey, DataKeyType newKey, DataHolder *items=nullptr)
Modify a key existed.
- DataValueType **getAvailableItemKey** (DataValueType key, DataHolder const *items=nullptr) const
- bool **setArrayValue** (DataKeyType key, DataValueType newValue, IndexType iRow=0, IndexType iColumn=0)
Set an array value with the specified indices.
- quint32 **numberItems** () const
- DataHolder const & **getItems** ()
- DataIDType **id** () const

- `ObjectType type () const`
- `QString const & name () const`
- `void setName (QString const &name)`
- `virtual void serialize (QDataStream &stream) const`
Serialize an abstract data object.
- `virtual void deserialize (QDataStream &stream)`
Partly deserialize an abstract data object.
- `virtual void import (QTextStream &stream)=0`

Static Public Member Functions

- `static DataIDType maxObjectID ()`
- `static void setMaxObjectID (DataIDType iMaxObjectID)`

Protected Attributes

- `const ObjectType mkType`
- `QString mName`
- `DataIDType mID`
- `DataHolder mItems`

Static Private Attributes

- `static DataIDType smMaxObjectID = 0`

Friends

- `QDataStream & operator<< (QDataStream &stream, AbstractDataObject const &obj)`
Print a data object to a stream.

4.1.1 Detailed Description

Data object which is designed in the way to be represented in a table easily.

4.1.2 Member Function Documentation

4.1.2.1 addItem()

```
virtual DataItemType & QRS::Core::AbstractDataObject::addItem (
    DataKeyType key ) [pure virtual]
```

Implemented in [QRS::Core::MatrixDataObject](#), [QRS::Core::ScalarDataObject](#), [QRS::Core::SurfaceDataObject](#), and [QRS::Core::VectorDataObject](#).

4.1.2.2 clone()

```
virtual AbstractDataObject * QRS::Core::AbstractDataObject::clone ( ) const [pure virtual]
```

Implemented in [QRS::Core::MatrixDataObject](#), [QRS::Core::ScalarDataObject](#), [QRS::Core::SurfaceDataObject](#), and [QRS::Core::VectorDataObject](#).

4.1.2.3 deserialize()

```
void AbstractDataObject::deserialize (
    QDataStream & stream ) [virtual]
```

Partly deserialize an abstract data object.

It is assumed that a type and name have already been assigned. So, only an identifier and items need to be set.

Reimplemented in [QRS::Core::SurfaceDataObject](#).

4.1.2.4 getAvailableItemKey()

```
DataValueType AbstractDataObject::getAvailableItemKey (
    DataValueType key,
    DataHolder const * items = nullptr ) const
```

Check if a given key is unique

Returns

Returns the input value of the key if it is unique, otherwise – a first available key

4.1.2.5 import()

```
virtual void QRS::Core::AbstractDataObject::import (
    QTextStream & stream ) [pure virtual]
```

Implemented in [QRS::Core::MatrixDataObject](#), [QRS::Core::ScalarDataObject](#), [QRS::Core::SurfaceDataObject](#), and [QRS::Core::VectorDataObject](#).

4.1.2.6 serialize()

```
void AbstractDataObject::serialize (
    QDataStream & stream ) const [virtual]
```

Serialize an abstract data object.

Reimplemented in [QRS::Core::SurfaceDataObject](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractdataobject.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractdataobject.cpp](#)

4.2 QRS::HierarchyModels::AbstractHierarchyItem Class Reference

Item to represent a hierarchy of elements of the same type.

```
#include <abstracthierarchyitem.h>
```

Inheritance diagram for QRS::HierarchyModels::AbstractHierarchyItem:

Public Types

- enum **ItemType** { **kDataObjects** = QStandardItem::UserType , **kRodComponents** }

Public Member Functions

- **AbstractHierarchyItem** (QIcon const &icon, QString const &text, [Core::HierarchyNode](#) *pNode)
- void **writePointer** (QDataStream &out) const
Write the pointer to the current item to a stream.
- virtual int **type** () const =0

Static Public Member Functions

- static [AbstractHierarchyItem](#) * **readPointer** (QDataStream &in)
Retrieve a pointer to an item from a stream.

Protected Attributes

- [Core::HierarchyNode](#) * **mpNode** = nullptr

Friends

- class **AbstractHierarchyModel**
- class **PropertiesModels::AbstractPropertiesModel**

4.2.1 Detailed Description

Item to represent a hierarchy of elements of the same type.

The documentation for this class was generated from the following files:

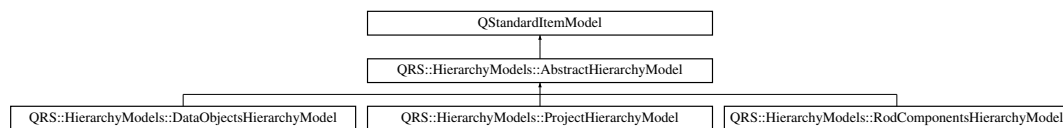

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/[abstracthierarchyitem.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/[abstracthierarchyitem.cpp](#)

4.3 QRS::HierarchyModels::AbstractHierarchyModel Class Reference

Hierarchy model which enables one to drag and drop elements of the same type.

```
#include <abstracthierarchymodel.h>
```

Inheritance diagram for QRS::HierarchyModels::AbstractHierarchyModel:

Signals

- void **hierarchyChanged** ()
Emitted when hierarchical elements get renamed, moved or deleted.

Public Member Functions

- **AbstractHierarchyModel** (QString const &mimeType, QTreeView *pView=nullptr)
- virtual void [updateContent](#) ()=0
- virtual void [clearContent](#) ()=0
- Qt::DropActions **supportedDragActions** () const override
Specify allowed drag actions.
- Qt::DropActions **supportedDropActions** () const override
Specify allowed drop actions.
- QStringList **mimeType** () const override
Retrieve the mime types.
- QMimeData * **mimeData** (const QModelIndexList &indices) const override
Encode each item according to a given list of indices.
- bool **dropMimeData** (QMimeData const *pMimeData, Qt::DropAction action, int row, int column, const QModelIndex &parent) override
Process the drop action.

Protected Attributes

- QString const **mkMimeType**

Private Member Functions

- bool **processDropOnItem** (QDataStream &stream, int &numItems, QModelIndex const &indexParent)
Merge several items into one entity.
- bool **processDropBetweenItems** (QDataStream &stream, int &numItems, QModelIndex const &indexParent, int row)
Change the order of items.
- void **retrieveExpandedState** (NodesState &nodesState, QModelIndex const &indexParent, QTreeView const *pView)
Retrieve information about whether each directory is expanded.
- void **setExpandedState** (NodesState &nodesState, QModelIndex const &indexParent, QTreeView *pView)
Set an expanded state of each directory.
- void **updateContentExpanded** ()

4.3.1 Detailed Description

Hierarchy model which enables one to drag and drop elements of the same type.

4.3.2 Member Function Documentation

4.3.2.1 clearContent()

```
virtual void QRS::HierarchyModels::AbstractHierarchyModel::clearContent ( ) [pure virtual]
```

Implemented in [QRS::HierarchyModels::DataObjectsHierarchyModel](#), [QRS::HierarchyModels::ProjectHierarchyModel](#), and [QRS::HierarchyModels::RodComponentsHierarchyModel](#).

4.3.2.2 updateContent()

```
virtual void QRS::HierarchyModels::AbstractHierarchyModel::updateContent ( ) [pure virtual]
```

Implemented in [QRS::HierarchyModels::DataObjectsHierarchyModel](#), [QRS::HierarchyModels::ProjectHierarchyModel](#), and [QRS::HierarchyModels::RodComponentsHierarchyModel](#).

4.3.2.3 updateContentExpanded()

```
void AbstractHierarchyModel::updateContentExpanded ( ) [private]
```

Since items are destroyed whenever the content is updated, an expanded state of each directory is saved and then set again.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/[abstracthierarchymodel.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/[abstracthierarchymodel.cpp](#)

4.4 QRS::Managers::AbstractManager Class Reference

Abstract manager to create objects of different types.

```
#include <abstractmanager.h>
```

Inheritance diagram for QRS::Managers::AbstractManager:

Public Types

- enum **ManagerType** { **kDataObjects** , **kRodComponents** , **kRodConstructor** }

Public Slots

- virtual void **apply** ()=0

Signals

- void **closed** (QRS::Managers::AbstractManager::ManagerType type)

Public Member Functions

- **AbstractManager** (QString &lastPath, QSettings &settings, ManagerType type, QString groupName, QWidget *parent=nullptr)
- void **saveSettings** ()
Save settings to a file.
- void **restoreSettings** ()
Restore settings from a file.

Protected Member Functions

- void **closeEvent** (QCloseEvent *pEvent) override
Save settings and delete handling widgets before closing the window.
- void **setToolBarShortcutHints** (QToolBar *pToolBar)
Helper function to add a shortcut hint to all actions which a toolbar contains.

Protected Attributes

- ads::CDockManager * **mpDockManager** = nullptr
- QString & **mLastPath**

Private Attributes

- QSettings & **mSettings**
- ManagerType const **mkType**
- QString const **mkGroupName**

4.4.1 Detailed Description

Abstract manager to create objects of different types.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[abstractmanager.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[abstractmanager.cpp](#)

4.5 QRS::PropertiesModels::AbstractPropertiesModel Class Reference

Model to represent general properties.

```
#include <abstractpropertiesmodel.h>
```

Inheritance diagram for QRS::PropertiesModels::AbstractPropertiesModel:

Signals

- void **propertyChanged** ()

Public Member Functions

- **AbstractPropertiesModel** (QTableView *pView, QVector< [HierarchyModels::AbstractHierarchyItem](#) * > items)

Protected Slots

- virtual void **modifyProperty** (QStandardItem *pChangedProperty)=0
- void **modifyDirectoryName** (QString const &name)
Change names of selected directories.

Protected Member Functions

- void **setDirectoryAttributes** ()
Set attributes of selected directories.
- QList< QStandardItem * > **preparePropertyRow** (int type, QString const &title, QVariant const &value, bool isValueEditable) const
Prepare a row to insert into the table.

Protected Attributes

- QVector< [HierarchyModels::AbstractHierarchyItem](#) * > **mItems**
- bool **mIsDirectory**
- QString const **mkEmptyProperty** = ""

Private Types

- enum **PropertyDirectory** { **kName** , **kNumberChildren** }

4.5.1 Detailed Description

Model to represent general properties.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/[abstractpropertiesmodel.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/[abstractpropertiesmodel.cpp](#)

4.6 QRS::Core::AbstractRodComponent Class Reference

Component of the rod structure which characterizes one of its properties.

```
#include <abstractrodcomponent.h>
```

Inheritance diagram for QRS::Core::AbstractRodComponent:

Public Types

- enum **ComponentType** {
 kGeometry , **kSection** , **kMaterial** , **kLoad** ,
 kConstraint , **kMechanical** }

Public Member Functions

- **AbstractRodComponent** (ComponentType componentType, QString const &name)
- virtual [AbstractRodComponent](#) * **clone** () const =0
- virtual bool **isDataComplete** () const =0
- DataIDType **id** () const
- ComponentType **componentType** () const
- QString const & **name** () const
- void **setName** (QString const &name)
- virtual void **serialize** (QDataStream &stream) const =0
- virtual void **deserialize** (QDataStream &stream, DataObjects const &dataObjects)=0
- virtual void **resolveReferences** (DataObjects const &dataObjects)=0

Static Public Member Functions

- static DataIDType **maxComponentID** ()
- static void **setMaxComponentID** (DataIDType iMaxComponentID)

Protected Member Functions

- void **writeDataObjectPointer** (QDataStream &stream, [AbstractDataObject](#) const *pDataObject) const
Helper function to write the identifier of a data object.
- [AbstractDataObject](#) const * **readDataObjectPointer** (QDataStream &stream, DataObjects const &dataObjects) const
Helper function to retrieve the pointer to the data object by its identifier.
- [AbstractDataObject](#) const * **getDataObject** (DataObjects const &dataObjects, DataIDType id) const
Retrieve a data object from a set by id.
- [AbstractDataObject](#) const * **substituteDataObject** (DataObjects const &dataObjects, [AbstractDataObject](#) const *pDataObject) const
Substitute a data object with its updated version.

Protected Attributes

- ComponentType const **mkComponentType**
- QString **mName**
- DataIDType **mID**

Static Private Attributes

- static DataIDType **smMaxComponentID** = 0

Friends

- QDataStream & **operator**<< (QDataStream &stream, [AbstractRodComponent](#) const &component)
Print a rod component to a stream.

4.6.1 Detailed Description

Component of the rod structure which characterizes one of its properties.

4.6.2 Member Function Documentation

4.6.2.1 clone()

```
virtual AbstractRodComponent * QRS::Core::AbstractRodComponent::clone ( ) const [pure virtual]
```

Implemented in [QRS::Core::ConstraintRodComponent](#), [QRS::Core::GeometryRodComponent](#), [QRS::Core::LoadRodComponent](#), [QRS::Core::MaterialRodComponent](#), [QRS::Core::MechanicalRodComponent](#), and [QRS::Core::UserSectionRodComponent](#).

4.6.2.2 deserialize()

```
virtual void QRS::Core::AbstractRodComponent::deserialize (
    QDataStream & stream,
    DataObjects const & dataObjects ) [pure virtual]
```

Implemented in [QRS::Core::AbstractSectionRodComponent](#), [QRS::Core::ConstraintRodComponent](#), [QRS::Core::GeometryRodComponent](#), [QRS::Core::LoadRodComponent](#), [QRS::Core::MaterialRodComponent](#), and [QRS::Core::MechanicalRodComponent](#).

4.6.2.3 isDataComplete()

```
virtual bool QRS::Core::AbstractRodComponent::isDataComplete ( ) const [pure virtual]
```

Implemented in [QRS::Core::GeometryRodComponent](#), [QRS::Core::LoadRodComponent](#), [QRS::Core::MaterialRodComponent](#), and [QRS::Core::UserSectionRodComponent](#).

4.6.2.4 resolveReferences()

```
virtual void QRS::Core::AbstractRodComponent::resolveReferences (
    DataObjects const & dataObjects ) [pure virtual]
```

Implemented in [QRS::Core::AbstractSectionRodComponent](#), [QRS::Core::GeometryRodComponent](#), [QRS::Core::LoadRodComponent](#), [QRS::Core::MaterialRodComponent](#), and [QRS::Core::MechanicalRodComponent](#).

4.6.2.5 serialize()

```
virtual void QRS::Core::AbstractRodComponent::serialize (
    QDataStream & stream ) const [pure virtual]
```

Implemented in [QRS::Core::AbstractSectionRodComponent](#), [QRS::Core::ConstraintRodComponent](#), [QRS::Core::GeometryRodComponent](#), [QRS::Core::LoadRodComponent](#), [QRS::Core::MaterialRodComponent](#), and [QRS::Core::MechanicalRodComponent](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractrodcomponent.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/abstractrodcomponent.cpp](#)

4.7 QRS::Managers::AbstractRodComponentWidget Class Reference

Widget to construct rod components of different types.

```
#include <abstractrodcomponentwidget.h>
```

Inheritance diagram for QRS::Managers::AbstractRodComponentWidget:

Signals

- void **modified** ()
- void **editDataObjectRequested** (Core::DataIDType id)

Public Member Functions

- **AbstractRodComponentWidget** (QString const &mimeType, QWidget *parent=nullptr)

Protected Member Functions

- void **setDataObjectEditConnections** ([DataObjectLineEdit](#) *pEdit, DataObjectSetFun &setFun)
Specify connections of an editor which hold pointers to data objects of different types.

Protected Attributes

- QString const **mkMimeType**

4.7.1 Detailed Description

Widget to construct rod components of different types.

The documentation for this class was generated from the following files:

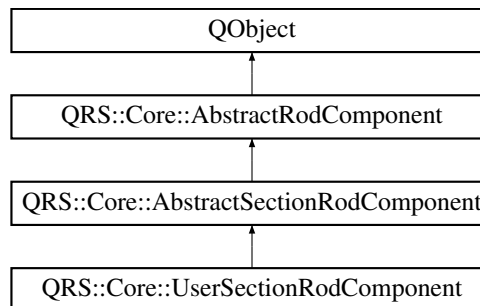

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractrodcomponentwidget.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/abstractrodcomponentwidget.cpp](#)

4.8 QRS::Core::AbstractSectionRodComponent Class Reference

General cross section of a rod.

```
#include <abstractsectionrodcomponent.h>
```

Inheritance diagram for QRS::Core::AbstractSectionRodComponent:

Public Types

- enum **SectionType** { **kUserDefined** }

Public Member Functions

- **AbstractSectionRodComponent** (SectionType sectionType, QString const &name)
- virtual **~AbstractSectionRodComponent** ()=0
Decrease a number of instances while being destroyed.
- void **serialize** (QDataStream &stream) const override
Serialize a cross section.
- void **deserialize** (QDataStream &stream, DataObjects const &dataObjects) override
Partly deserialize an abstract rod component.
- void **resolveReferences** (DataObjects const &dataObjects) override
Resolve references of a cross-section.
- SectionType **sectionType** () const

Static Public Member Functions

- static quint32 **numberInstances** ()

Protected Member Functions

- void **copyIntegratedProperties** ([AbstractSectionRodComponent](#) const *pSection)
Copy integrated properties of a cross section.

Protected Attributes

- SectionType const **mkSectionType**
- QPointer< [ScalarDataObject](#) const > **mpArea**
- QPointer< [ScalarDataObject](#) const > **mpInertiaMomentTorsional**
- QPointer< [ScalarDataObject](#) const > **mpInertiaMomentX**
- QPointer< [ScalarDataObject](#) const > **mpInertiaMomentY**
- QPointer< [ScalarDataObject](#) const > **mpCenterCoordinateX**
- QPointer< [ScalarDataObject](#) const > **mpCenterCoordinateY**

Static Protected Attributes

- static quint32 **smNumInstances** = 0

4.8.1 Detailed Description

General cross section of a rod.

4.8.2 Member Function Documentation

4.8.2.1 deserialize()

```
void AbstractSectionRodComponent::deserialize (
    QDataStream & stream,
    DataObjects const & dataObjects ) [override], [virtual]
```

Partly deserialize an abstract rod component.

It is assumed that a type and name have already been assigned. So, only integrated properties need to be set.

Implements [QRS::Core::AbstractRodComponent](#).

4.8.2.2 resolveReferences()

```
void AbstractSectionRodComponent::resolveReferences (
    DataObjects const & dataObjects ) [override], [virtual]
```

Resolve references of a cross-section.

Implements [QRS::Core::AbstractRodComponent](#).

4.8.2.3 serialize()

```
void AbstractSectionRodComponent::serialize (
    QDataStream & stream ) const [override], [virtual]
```

Serialize a cross section.

Implements [QRS::Core::AbstractRodComponent](#).

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[abstractsectionrodcomponent.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[abstractsectionrodcomponent.cpp](#)

4.9 QRS::Core::Array< T > Class Template Reference

Numerical array class.

```
#include <array.h>
```

Classes

- struct [Row](#)
Proxy class to acquire a row by index.

Public Member Functions

- **Array** (IndexType numRows=0, IndexType numCols=0)
- **Array** ([Array](#)< T > const &another)
Copy constructor.
- **Array** ([Array](#)< T > &&another)
Move constructor.
- T * **data** ()
- void **resize** (IndexType numRows, IndexType numCols)
Resize and copy previous values if possible.
- void **removeColumn** (IndexType iRemoveColumn)
Remove a column by index.
- void **swapColumns** (IndexType iFirstColumn, IndexType iSecondColumn)
Swap two columns.
- IndexType **rows** () const
- IndexType **cols** () const
- IndexType **size** () const
- [Row](#)< T > **operator[]** (IndexType iRow)
- [Row](#)< T > **operator[]** (IndexType iRow) const
- [Array](#) & **operator=** ([Array](#)< T > const &another)
Assignment operator.

Private Attributes

- IndexType **mNumRows**
Number of rows.
- IndexType **mNumCols**
Number of columns.
- T * **mpData** = nullptr
Pointer to the data stored.

Friends

- template<typename K >
QDebug **operator**<< (QDebug stream, [Array](#)< K > &array)
Print all array values using the matrix format.
- template<typename K >
QDataStream & **operator**<< (QDataStream &stream, [Array](#)< K > const &array)
Write an array to a stream.
- template<typename K >
QDataStream & **operator**>> (QDataStream &stream, [Array](#)< K > &array)
Read an array from a stream.

4.9.1 Detailed Description

```
template<typename T>
class QRS::Core::Array< T >
```

Numerical array class.

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/array.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/array.cpp](#)

4.10 QRS::TableModels::BaseTableModel Class Reference

Table model to represent either a scalar or vector data object.

```
#include <basetablemodel.h>
```

Inheritance diagram for QRS::TableModels::BaseTableModel:

Public Member Functions

- **BaseTableModel** (QWidget *parent=nullptr)
- void **setDataObject** ([Core::AbstractDataObject](#) *pDataObject)
Set a data object to represent.
- bool **setData** (const QModelIndex &indexEdit, const QVariant &value, int role=Qt::EditRole) override
Set the data acquired from a delegate.
- void **insertItemAfterSelected** (QItemSelectionModel *pSelectionModel) override
Insert a new item after selected one.
- void **insertLeadingItemAfterSelected** (QItemSelectionModel *) override
- void **removeSelectedItem** (QItemSelectionModel *pSelectionModel) override
Remove an array under selection.
- void **removeSelectedLeadingItem** (QItemSelectionModel *) override

Private Member Functions

- void **updateContent** ()
Represent all items which a data object contains.
- void **clearContent** ()
Clear previously created items.

Private Attributes

- [Core::AbstractDataObject](#) * **mpDataObject** = nullptr

Additional Inherited Members

4.10.1 Detailed Description

Table model to represent either a scalar or vector data object.

4.10.2 Member Function Documentation

4.10.2.1 insertItemAfterSelected()

```
void BaseTableModel::insertItemAfterSelected (
    QItemSelectionModel * pSelectionModel ) [override], [virtual]
```

Insert a new item after selected one.

Implements [QRS::TableModels::TableModelInterface](#).

4.10.2.2 insertLeadingItemAfterSelected()

```
void QRS::TableModels::BaseTableModel::insertLeadingItemAfterSelected (
    QItemSelectionModel * ) [inline], [override], [virtual]
```

Implements [QRS::TableModels::TableModelInterface](#).

4.10.2.3 removeSelectedItem()

```
void BaseTableModel::removeSelectedItem (
    QItemSelectionModel * pSelectionModel ) [override], [virtual]
```

Remove an array under selection.

Implements [QRS::TableModels::TableModelInterface](#).

4.10.2.4 removeSelectedLeadingItem()

```
void QRS::TableModels::BaseTableModel::removeSelectedLeadingItem (
    QItemSelectionModel * ) [inline], [override], [virtual]
```

Implements [QRS::TableModels::TableModelInterface](#).

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/basetablemodel.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/basetablemodel.cpp

4.11 QRS::Managers::ConstraintItemDelegate Class Reference

Class to specify how options of a constraint can be edited.

```
#include <constraintitemdelegate.h>
```

Inheritance diagram for QRS::Managers::ConstraintItemDelegate:

Signals

- void **typeCreated** (int iRow) const
- void **typeChanged** (int iRow, Core::ConstraintRodComponent::ConstraintType oldType) const
- void **coordinateSystemChanged** (int iRow) const

Public Member Functions

- **ConstraintItemDelegate** ([Core::ConstraintRodComponent](#) const &constraintRodComponent, ConstraintTypeNames const &types, ConstraintCoordinateSystemNames const &coordinateSystems, QObject *parent=nullptr)
- QWidget * **createEditor** (QWidget *pCell, const QStyleOptionViewItem &option, const QModelIndex &index) const override
Create a comboBox to choose items.
- void **setEditorData** (QWidget *pEditor, const QModelIndex &index) const override
Specify data to show.
- void **setModelData** (QWidget *pEditor, QAbstractItemModel *pModel, const QModelIndex &index) const override
Set data to a model.
- void **updateEditorGeometry** (QWidget *pEditor, const QStyleOptionViewItem &option, const QModelIndex &index) const override
Set a geometry to render.

Private Attributes

- [Core::ConstraintRodComponent](#) const & **mConstraintRodComponent**
- ConstraintTypeNames const & **mTypes**
- ConstraintCoordinateSystemNames const & **mCoordinateSystems**

4.11.1 Detailed Description

Class to specify how options of a constraint can be edited.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[constraintitemdelegate.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[constraintitemdelegate.cpp](#)

4.12 QRS::Core::ConstraintRodComponent Class Reference

Component to restrict movements of a rod.

```
#include <constraintrodcomponent.h>
```

Inheritance diagram for QRS::Core::ConstraintRodComponent:

Public Types

- enum **ConstraintType** {
 kDisplacementX , **kDisplacementY** , **kDisplacementZ** , **kRotationX** ,
 kRotationY , **kRotationZ** }
- enum **ConstraintCoordinateSystem** { **kGlobal** , **kLocal** }
- using **Constraints** = std::map< ConstraintType, ConstraintCoordinateSystem >

Public Member Functions

- **ConstraintRodComponent** (QString const &name)
- **~ConstraintRodComponent** ()
 Decrease a number of instances while being destroyed.
- **AbstractRodComponent** * **clone** () const override
 Clone a constraint rod component.
- bool **isDataComplete** () const override
- void **serialize** (QDataStream &stream) const override
 Serialize all properties of a constraint component.
- void **deserialize** (QDataStream &stream, DataObjects const &dataObjects) override
 Deserialize a constraint component.
- void **resolveReferences** (DataObjects const &) override
- bool **isConstraintExist** (ConstraintType type) const
 Check whether the constraint of the specified type exists.
- void **setConstraint** (ConstraintType type, ConstraintCoordinateSystem coordinateSystem)
 Set a constraint.
- bool **removeConstraint** (ConstraintType type)
 Remove the constraint of a given type.
- Constraints const & **constraints** () const

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- Constraints **mConstraints**

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.12.1 Detailed Description

Component to restrict movements of a rod.

4.12.2 Member Function Documentation

4.12.2.1 clone()

```
AbstractRodComponent * ConstraintRodComponent::clone ( ) const [override], [virtual]
```

Clone a constraint rod component.

Implements [QRS::Core::AbstractRodComponent](#).

4.12.2.2 deserialize()

```
void ConstraintRodComponent::deserialize (
    QDataStream & stream,
    DataObjects const & dataObjects ) [override], [virtual]
```

Deserialize a constraint component.

Implements [QRS::Core::AbstractRodComponent](#).

4.12.2.3 isDataComplete()

```
bool QRS::Core::ConstraintRodComponent::isDataComplete ( ) const [inline], [override], [virtual]
```

Implements [QRS::Core::AbstractRodComponent](#).

4.12.2.4 resolveReferences()

```
void QRS::Core::ConstraintRodComponent::resolveReferences (
    DataObjects const & ) [inline], [override], [virtual]
```

Implements [QRS::Core::AbstractRodComponent](#).

4.12.2.5 serialize()

```
void ConstraintRodComponent::serialize (
    QDataStream & stream ) const    [override], [virtual]
```

Serialize all properties of a constraint component.

Implements [QRS::Core::AbstractRodComponent](#).

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[constraintrodcomponent.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[constraintrodcomponent.cpp](#)

4.13 QRS::Managers::ConstraintRodComponentWidget Class Reference

Widget to consturct constraints of a rod.

```
#include <constraintrodcomponentwidget.h>
```

Inheritance diagram for QRS::Managers::ConstraintRodComponentWidget:

Public Member Functions

- **ConstraintRodComponentWidget** ([Core::ConstraintRodComponent](#) &constraintRodComponent, QWidget *parent=nullptr)

Private Slots

- void **setConstraintData** (int iRow)
Change a constraint property.

Private Member Functions

- void **createContent** ()
Create all the widgets.
- QToolBar * **createToolBar** ()
Create a toolbar to add and remove constraints.
- void **createTableWidget** ()
Create a table to construct constraints.
- void **addRow** ()
Add a row at the end of the table.
- void **removeSelectedRows** ()
Remove selected rows from the table.
- void **representConstraintData** ()
Represent existing constraints.
- void **setTableHeight** ()
Set the height of the table to be enough to represent all rows.
- void **specifyConstraintNames** ()
Specify names of constraints.
- QVariant **getItemData** (int iRow, int iColumn)
Retrieve item data.

Private Attributes

- [Core::ConstraintRodComponent](#) & **mConstraintRodComponent**
- QTableWidgetItem * **mpTableConstraint**
- [ConstraintItemDelegate](#) * **mplItemDelegate**
- ConstraintTypeNames **mTypeNames**
- ConstraintCoordinateSystemNames **mCoordinateSystemNames**

Additional Inherited Members

4.13.1 Detailed Description

Widget to construct constraints of a rod.

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintrodcomponentwidget.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/constraintrodcomponentwidget.cpp](#)

4.14 QRS::Managers::DataObjectLineEdit Class Reference

Line edit widget to hold a pointer to a data object.

```
#include <dataobjectlineedit.h>
```

Inheritance diagram for QRS::Managers::DataObjectLineEdit:

Signals

- void **selected** ([Core::AbstractDataObject](#) const *pDataObject)
- void **editRequested** (Core::DataIDType id)

Public Member Functions

- **DataObjectLineEdit** ([Core::AbstractDataObject](#) const *pDataObject, Core::AbstractDataObject::ObjectType type, QString const &mimeType, QWidget *parent=nullptr)

Private Slots

- void **showContextMenu** (const QPoint &point)
Show a menu to modify data.
- void **reset** ()
Erase the address of the data object.
- void **edit** ()
Try to edit a data object through managers.

Private Member Functions

- void **dragEnterEvent** (QDragEnterEvent *pEvent) override
Check if the type of the dropped item is correct.
- void **dropEvent** (QDropEvent *pEvent) override
Process dropping of the approved item.
- void **keyPressEvent** (QKeyEvent *pEvent) override
Erase the data object address.
- void **mouseDoubleClickEvent** (QMouseEvent *pEvent) override
Start the editing session when a double click event occurs.

Private Attributes

- [Core::AbstractDataObject](#) const * **mpDataObject**
- Core::AbstractDataObject::ObjectType **mType**
- QString const **mkMimeType**

4.14.1 Detailed Description

Line edit widget to hold a pointer to a data object.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[dataobjectlineedit.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[dataobjectlineedit.cpp](#)

4.15 QRS::HierarchyModels::DataObjectsHierarchyItem Class Reference

Item to represent a hierarchy of data objects.

```
#include <dataobjectshierarchyitem.h>
```

Inheritance diagram for QRS::HierarchyModels::DataObjectsHierarchyItem:

Public Member Functions

- **DataObjectsHierarchyItem** (Core::DataObjects &dataObjects, [Core::HierarchyTree](#) &hierarchyDataObjects, QString const &text="Root", QIcon const &icon=QIcon())
Create the representative of the structure of data objects.
- **DataObjectsHierarchyItem** ([Core::HierarchyNode](#) *pNode, [Core::AbstractDataObject](#) *pDataObject)
Construct an item to represent a data object.
- **DataObjectsHierarchyItem** ([Core::HierarchyNode](#) *pNode)
Construct an item to represent a directory.
- int [type](#) () const override
- [Core::AbstractDataObject](#) const * **getDataObject** () const

Private Member Functions

- void **appendItems** (Core::DataObjects &dataObjects, [Core::HierarchyNode](#) *pNode)
Create items based on the position in the tree structure.

Private Attributes

- [Core::AbstractDataObject](#) * **mpDataObject** = nullptr

Friends

- class **DataObjectsHierarchyModel**
- class **PropertiesModels::DataObjectsPropertiesModel**

Additional Inherited Members

4.15.1 Detailed Description

Item to represent a hierarchy of data objects.

4.15.2 Member Function Documentation

4.15.2.1 type()

```
int QRS::HierarchyModels::DataObjectsHierarchyItem::type ( ) const [inline], [override],
[virtual]
```

Implements [QRS::HierarchyModels::AbstractHierarchyItem](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchyitem.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchyitem.cpp](#)

4.16 QRS::HierarchyModels::DataObjectsHierarchyModel Class Reference

Tree model to represent and modify a hierarchy of data objects.

```
#include <dataobjectshierarchymodel.h>
```

Inheritance diagram for QRS::HierarchyModels::DataObjectsHierarchyModel:

Public Slots

- void **retrieveSelectedItem** ()
Retrieve a selected data object.
- void **removeSelectedItems** ()
Remove data objects under selection.

Signals

- void **selected** (Core::DataIDType id)
- void **selectionCleared** ()

Public Member Functions

- **DataObjectsHierarchyModel** (Core::DataObjects &dataObjects, [Core::HierarchyTree](#) &hierarchyData↔ Objects, QString const &mimeType, QTreeView *pView=nullptr)
Update all the content.
- void [updateContent](#) () override
Update all the content.
- void [clearContent](#) () override
Clear all the items.
- bool **isEmpty** () const
Check if there are data objects to represent.
- void **selectItem** (int iRow)
Select an item by row index.
- void **selectItemByID** (Core::DataIDType id)
Select an item by type and identifier.

Private Slots

- void **renameItem** (QStandardItem *pStandardItem)
Rename a data object after editing.

Private Member Functions

- [DataObjectsHierarchyItem](#) * **findItemByID** ([DataObjectsHierarchyItem](#) *pItem, Core::DataIDType const &id)
Find an item by identifier.
- void **selectItem** ([DataObjectsHierarchyItem](#) *pItem)
Select a specified item.

Private Attributes

- Core::DataObjects & **mDataObjects**
- [Core::HierarchyTree](#) & **mHierarchyDataObjects**

Additional Inherited Members

4.16.1 Detailed Description

Tree model to represent and modify a hierarchy of data objects.

4.16.2 Member Function Documentation

4.16.2.1 clearContent()

```
void DataObjectsHierarchyModel::clearContent ( ) [override], [virtual]
```

Clear all the items.

Implements [QRS::HierarchyModels::AbstractHierarchyModel](#).

4.16.2.2 updateContent()

```
void DataObjectsHierarchyModel::updateContent ( ) [override], [virtual]
```

Update all the content.

Implements [QRS::HierarchyModels::AbstractHierarchyModel](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchymodel.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/dataobjectshierarchymodel.cpp](#)

4.17 QRS::Managers::DataObjectsManager Class Reference

Manager to create objects of different types: scalars, vectors, matroces and surfaces.

```
#include <dataobjectsmanager.h>
```

Inheritance diagram for QRS::Managers::DataObjectsManager:

Public Slots

- void **apply** () override
Apply all the changes made by user.
- [Core::AbstractDataObject](#) * **addScalar** ()
Add a scalar object.
- [Core::AbstractDataObject](#) * **addVector** ()
Add a vector object.
- [Core::AbstractDataObject](#) * **addMatrix** ()
Add a matrix object.
- [Core::AbstractDataObject](#) * **addSurface** ()
Add a surface object.
- void **insertItemAfterSelected** ()
Insert a new array into the data object.
- void **insertLeadingItemAfterSelected** ()
Insert a new leading item into the data object.
- void **removeSelectedItem** ()
Remove a selected item.
- void **removeSelectedLeadingItem** ()
Remove a selected leading item.
- void **importDataObjects** ()
Import data objects from a file.

Signals

- void **applied** ([Core::DataObjects](#) const &dataObjects, [Core::HierarchyTree](#) const &hierarchyDataObjects)

Public Member Functions

- **DataObjectsManager** ([Core::DataObjects](#) &&dataObjects, [Core::HierarchyTree](#) &&hierarchyDataObjects, QString &lastPath, QSettings &settings, QWidget *parent=nullptr)
- void **selectDataObject** (int iRow)
Select a data object by row index.
- void **selectDataObjectByID** ([Core::DataIDType](#) id)
Select a data object by identifier.
- [Core::DataObjects](#) const & **getDataObjects** ()

Private Member Functions

- void **createContent** ()
Create all the widgets.
- [ads::CDockWidget](#) * **createDataTableWidget** ()
Create a tabbed widget to interact with data tables.
- [ads::CDockWidget](#) * **createHierarchyWidget** ()
Create an object to represent a hierarchy of data objects.
- [QLayout](#) * **createDialogControls** ()
Create dialog controls.
- void **emplaceDataObject** ([Core::AbstractDataObject](#) *pDataObject)
Helper function to insert data objects into the manager.

- **bool isDataTableModifiable ()**
Helper function to check if it is possible to interact with data object content.
- **void importDataObject** (QString const &path, QString const &fileName)
Import a data object from a file.
- **void representDataObject** (Core::DataIDType id)
Represent a selected data object according to its type.
- **void clearDataObjectRepresentation** ()
Clear a visual data of a data object.

Private Attributes

- QTreeView * **mpTreeDataObjects**
- QTreeView * **mpDataTable**
- Core::DataObjects **mDataObjects**
- [Core::HierarchyTree](#) **mHierarchyDataObjects**
- [TableModels::TableModelInterface](#) * **mpTableModelInterface** = nullptr
- [TableModels::BaseTableModel](#) * **mpBaseTableModel**
- [TableModels::MatrixTableModel](#) * **mpMatrixTableModel**
- [TableModels::SurfaceTableModel](#) * **mpSurfaceTableModel**
- [HierarchyModels::DataObjectsHierarchyModel](#) * **mpTreeDataObjectsModel**

Additional Inherited Members

4.17.1 Detailed Description

Manager to create objects of different types: scalars, vectors, matroces and surfaces.

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectsmanager.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/dataobjectsmanager.cpp](#)

4.18 QRS::PropertiesModels::DataObjectsPropertiesModel Class Reference

Model to represent properties of selected data objects.

```
#include <dataobjectspropertiesmodel.h>
```

Inheritance diagram for QRS::PropertiesModels::DataObjectsPropertiesModel:

Public Member Functions

- **DataObjectsPropertiesModel** (QTableView *pView, QVector< [HierarchyModels::AbstractHierarchyItem](#) * > items)

Protected Slots

- void **modifyProperty** (QStandardItem *pChangedProperty) override
Modify the selected property of all items.

Private Types

- enum **PropertyDataObject** {
 kName , **kType** , **kNumberItems** , **kNumberEntities** ,
 kID }

Private Member Functions

- void **setObjectAttributes** ()
Set attributes of selected data objects.

Additional Inherited Members

4.18.1 Detailed Description

Model to represent properties of selected data objects.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/[dataobjectspropertiesmodel.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/properties/[dataobjectspropertiesmodel.cpp](#)

4.19 QRS::Managers::DoubleSpinBoxItemDelegate Class Reference

Class to specify how table values can be edited.

```
#include <doublespinboxitemdelegate.h>
```

Inheritance diagram for QRS::Managers::DoubleSpinBoxItemDelegate:

Public Member Functions

- **DoubleSpinBoxItemDelegate** (QObject *parent=nullptr)
- QWidget * **createEditor** (QWidget *parent, const QStyleOptionViewItem &option, const QModelIndex &index) const override
Create a double value editor.
- void **setEditorData** (QWidget *pEditor, const QModelIndex &index) const override
Specify data to show.
- void **setModelData** (QWidget *pEditor, QAbstractItemModel *pModel, const QModelIndex &index) const override
Set data to a model.
- void **updateEditorGeometry** (QWidget *pEditor, const QStyleOptionViewItem &option, const QModelIndex &index) const override
Set a geometry to render.

4.19.1 Detailed Description

Class to specify how table values can be edited.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[doublespinboxitemdelegate.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[doublespinboxitemdelegate.cpp](#)

4.20 QRS::Core::GeometryRodComponent Class Reference

Geometrical configuration of a rod.

```
#include <geometryrodcomponent.h>
```

Inheritance diagram for QRS::Core::GeometryRodComponent:

Public Member Functions

- **GeometryRodComponent** (QString const &name)
- **~GeometryRodComponent** ()
Decrease a number of instances while being destroyed.
- **AbstractRodComponent** * **clone** () const override
Clone a geometrical rod component.
- bool **isDataComplete** () const override
Check whether the component data is complete.
- void **serialize** (QDataStream &stream) const override
Serialize all properties of a geometrical component.
- void **deserialize** (QDataStream &stream, DataObjects const &dataObjects) override
Deserialize a geometrical component.
- void **resolveReferences** (DataObjects const &dataObjects) override
Resolve references of a geometrical rod component.
- **VectorDataObject** const * **radiusVector** () const
- **MatrixDataObject** const * **rotationMatrix** () const
- void **setRadiusVector** (**VectorDataObject** const *pRadiusVector)
- void **setRotationMatrix** (**MatrixDataObject** const *pRotationMatrix)

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- QPointer< **VectorDataObject** const > **mpRadiusVector**
- QPointer< **MatrixDataObject** const > **mpRotationMatrix**

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.20.1 Detailed Description

Geometrical configuration of a rod.

4.20.2 Member Function Documentation

4.20.2.1 clone()

```
AbstractRodComponent * GeometryRodComponent::clone ( ) const [override], [virtual]
```

Clone a geometrical rod component.

Implements [QRS::Core::AbstractRodComponent](#).

4.20.2.2 deserialize()

```
void GeometryRodComponent::deserialize (
    QDataStream & stream,
    DataObjects const & dataObjects ) [override], [virtual]
```

Deserialize a geometrical component.

Implements [QRS::Core::AbstractRodComponent](#).

4.20.2.3 isDataComplete()

```
bool GeometryRodComponent::isDataComplete ( ) const [override], [virtual]
```

Check whether the component data is complete.

Implements [QRS::Core::AbstractRodComponent](#).

4.20.2.4 resolveReferences()

```
void GeometryRodComponent::resolveReferences (
    DataObjects const & dataObjects ) [override], [virtual]
```

Resolve references of a geometrical rod component.

Implements [QRS::Core::AbstractRodComponent](#).

4.20.2.5 serialize()

```
void GeometryRodComponent::serialize (
    QDataStream & stream ) const [override], [virtual]
```

Serialize all properties of a geometrical component.

Implements [QRS::Core::AbstractRodComponent](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/geometryrodcomponent.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/geometryrodcomponent.cpp](#)

4.21 QRS::Managers::GeometryRodComponentWidget Class Reference

Widget to construct a geometrical rod component.

```
#include <geometryrodcomponentwidget.h>
```

Inheritance diagram for QRS::Managers::GeometryRodComponentWidget:

Public Member Functions

- **GeometryRodComponentWidget** ([Core::GeometryRodComponent](#) &geometryRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void **createContent** ()
Create all the widgets.
- template<typename T >
void **setProperty** ([Core::AbstractDataObject](#) const *pDataObject, auto setFun)
Set a property of a rod geometry.

Private Attributes

- [Core::GeometryRodComponent](#) & **mGeometryRodComponent**

Additional Inherited Members

4.21.1 Detailed Description

Widget to construct a geometrical rod component.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[geometryrodcomponentwidget.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[geometryrodcomponentwidget.cpp](#)

4.22 QRS::Core::HierarchyNode Class Reference

Hierarchy representative.

```
#include <hierarchynode.h>
```

Public Types

- enum **NodeType** { **kObject** , **kDirectory** }

Public Member Functions

- **HierarchyNode** (NodeType type, QVariant value)
Node constructor.
- void **appendChild** (HierarchyNode *node)
Add a child node.
- bool **hasParent** () const
- bool **hasChild** () const
- bool **hasNextSibling** () const
- HierarchyNode * **parent** ()
- HierarchyNode * **firstChild** ()
- HierarchyNode * **nextSibling** ()
- NodeType **type** () const
- QVariant & **value** ()
- HierarchyNode * **groupNodes** (HierarchyNode *pChildNode)
Merge two nodes into one entity.
- bool **setBefore** (HierarchyNode *pSetNode)
Set a given node before the current one.
- bool **setAfter** (HierarchyNode *pSetNode)
Set a given node after the current one.
- quint32 **numberChildren** () const
Retrieve a number of children of the current node.

Private Member Functions

- void **excludeNodeFromHierarchy** ()
Remove all links to the node.
- bool **isSetAllowed** (HierarchyNode const *pNode) const
Check whether it is possible to place a given item before or after the current one.
- bool **isParentOf** (HierarchyNode const *pNode) const
Check whether the current item contains a given node as a child.
- quint32 **countNodes** (HierarchyNode *pNode, quint32 &numNodes) const
Count all children and siblings of a given node.

Private Attributes

- HierarchyNode * **mpParent** = nullptr
- HierarchyNode * **mpFirstChild** = nullptr
- HierarchyNode * **mpNextSibling** = nullptr
- HierarchyNode * **mpPreviousSibling** = nullptr
- NodeType **mType**
- QVariant **mValue**

Friends

- class **HierarchyTree**

4.22.1 Detailed Description

Hierarchy representative.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchynode.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/hierarchynode.cpp

4.23 QRS::Core::HierarchyTree Class Reference

Hierarchy of data objects (n-array tree)

```
#include <hierarchytree.h>
```

Public Member Functions

- **HierarchyTree** ()
Base tree constructor.
- **HierarchyTree** ([HierarchyTree](#) &another)
Copy constructor.
- **HierarchyTree** ([HierarchyTree](#) &&another)
Move constructor.
- **HierarchyTree** ([HierarchyNode](#) *pRootNode)
Take the user defined node as the root.
- **HierarchyTree** (QDataStream &stream, int numNodes)
Read a tree from a stream.
- **HierarchyTree** & **operator=** ([HierarchyTree](#) const &another)
Copy assignment operator.
- **HierarchyTree** & **operator=** ([HierarchyTree](#) &&another)
Move assignment operator.
- **~HierarchyTree** ()
Tree destructor.
- void **clear** ()
Delete all nodes except the root node.
- void **appendNode** ([HierarchyNode](#) *pNode)
Append a node to the root node.
- bool **removeNode** (HierarchyNode::NodeType type, QVariant const &value)
Remove a node by type and value.
- void **removeNode** ([HierarchyNode](#) *pNode)
Remove a node and all its subnodes.
- void **changeNodeValue** (HierarchyNode::NodeType type, QVariant const &oldValue, QVariant const &newValue)
Change the value of a node.
- [HierarchyNode](#) * **root** ()
- **HierarchyTree** **clone** () const
Clone a tree.
- [HierarchyNode](#) * **findNode** ([HierarchyNode](#) *pBaseNode, HierarchyNode::NodeType type, QVariant const &value) const
Find a node by type and value.
- quint32 **size** () const
Get a number of nodes.

Private Member Functions

- [HierarchyNode](#) * **copyNode** ([HierarchyNode](#) *pBaseNode, quint32 relativeLevel) const
Copy a node.
- void **removeNodeSiblings** ([HierarchyNode](#) *pNode)
Remove all subnodes.
- void **printNode** (quint32 level, [HierarchyNode](#) *pNode, QDebug stream) const
Print a current node and all its subnodes.
- void **writeNode** ([HierarchyNode](#) *pNode, QDataStream &stream) const
Print a current node and all its subnodes.

Private Attributes

- [HierarchyNode](#) * **mpRootNode** = nullptr

Friends

- QDebug **operator**<< (QDebug stream, [HierarchyTree](#) &tree)
Print a tree structure.
- QDataStream & **operator**<< (QDataStream &stream, [HierarchyTree](#) const &tree)
Write a tree structure to a stream.

4.23.1 Detailed Description

Hierarchy of data objects (n-array tree)

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[hierarchytree.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[hierarchytree.cpp](#)

4.24 QRS::Core::LoadRodComponent Class Reference

Load applied to a rod.

```
#include <loadrodcomponent.h>
```

Inheritance diagram for QRS::Core::LoadRodComponent:

Public Types

- enum **LoadType** {
kNone , **kForcedDisplacements** , **kForcedRotations** , **kPointForce** ,
kPointMoment , **kPointMass** , **kPointInertiaMoment** , **kPointLinearDamper** ,
kPointRotationalDamper , **kDistributedForce** , **kDistributedMoment** , **kAerodynamicFlow** ,
kAcceleration , **kInnerLiquidFlow** , **kDisplacementDamping** , **kRotationDamping** }

Public Member Functions

- **LoadRodComponent** (QString const &name)
- **~LoadRodComponent** ()
Decrease a number of instances while being destroyed.
- **AbstractRodComponent** * **clone** () const override
Clone a rod load.
- bool **isDataComplete** () const override
Check whether the component data is complete.
- void **serialize** (QDataStream &stream) const override
Serialize all properties of a rod load.
- void **deserialize** (QDataStream &stream, DataObjects const &dataObjects) override
Deserialize a rod load.
- void **resolveReferences** (DataObjects const &dataObjects) override
Resolve references of a rod load.
- LoadType **loadType** () const
- **VectorDataObject** const * **directionVector** () const
- **ScalarDataObject** const * **longitudinalFunction** () const
- **ScalarDataObject** const * **timeCoefficient** () const
- **VectorDataObject** const * **timeRotationVector** () const
- DataValueType **multiplier** () const
- bool **isFollowing** () const
- void **setType** (LoadType type)
- void **setDirectionVector** (**VectorDataObject** const *pDirectionVector)
- void **setLongitudinalFunction** (**ScalarDataObject** const *pLongitudinalFunction)
- void **setTimeCoefficient** (**ScalarDataObject** const *pTimeCoefficient)
- void **setTimeRotationVector** (**VectorDataObject** const *pTimeRotationVector)
- void **setMultiplier** (DataValueType value)
- void **setFollowingState** (bool isFollowing)

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- LoadType **mLoadType** = kNone
- QPointer< **VectorDataObject** const > **mpDirectionVector**
- QPointer< **ScalarDataObject** const > **mpLongitudinalFunction**
- QPointer< **ScalarDataObject** const > **mpTimeCoefficient**
- QPointer< **VectorDataObject** const > **mpTimeRotationVector**
- DataValueType **mMultiplier** = 1.0
- bool **mIsFollowing** = false

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.24.1 Detailed Description

Load applied to a rod.

4.24.2 Member Function Documentation

4.24.2.1 clone()

```
AbstractRodComponent * LoadRodComponent::clone ( ) const [override], [virtual]
```

Clone a rod load.

Implements [QRS::Core::AbstractRodComponent](#).

4.24.2.2 deserialize()

```
void LoadRodComponent::deserialize (
    QDataStream & stream,
    DataObjects const & dataObjects ) [override], [virtual]
```

Deserialize a rod load.

Implements [QRS::Core::AbstractRodComponent](#).

4.24.2.3 isDataComplete()

```
bool LoadRodComponent::isDataComplete ( ) const [override], [virtual]
```

Check whether the component data is complete.

Implements [QRS::Core::AbstractRodComponent](#).

4.24.2.4 resolveReferences()

```
void LoadRodComponent::resolveReferences (
    DataObjects const & dataObjects ) [override], [virtual]
```

Resolve references of a rod load.

Implements [QRS::Core::AbstractRodComponent](#).

4.24.2.5 serialize()

```
void LoadRodComponent::serialize (
    QDataStream & stream ) const [override], [virtual]
```

Serialize all properties of a rod load.

Implements [QRS::Core::AbstractRodComponent](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/loadrodcomponent.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/loadrodcomponent.cpp](#)

4.25 QRS::Managers::LoadRodComponentWidget Class Reference

Widget to construct a load applied to a rod.

```
#include <loadrodcomponentwidget.h>
```

Inheritance diagram for QRS::Managers::LoadRodComponentWidget:

Public Member Functions

- **LoadRodComponentWidget** ([Core::LoadRodComponent](#) &loadRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void **createContent** ()
Create all the widgets.
- QLayout * **createBaseLayout** ()
Create a layout consisted of widgets to set loading parameters.
- QWidget * **createTimeGroup** ()
Create a group of widgets which depend on time.
- QLayout * **createLoadTypeLayout** ()
Create a layout consisted of widgets to set a load type and following state.
- QComboBox * **createLoadTypeComboBox** ()
Create a combobox to specify a type of load.
- template<typename T >
void **setProperty** (Core::AbstractDataObject const *pDataObject, auto setFun)
Set a property of a rod load.
- void **setLoadUnits** (Core::LoadRodComponent::LoadType type)
Set load units to show.

Private Attributes

- Core::LoadRodComponent & **mLoadRodComponent**
- QLabel * **mpLoadRodUnits**

Additional Inherited Members

4.25.1 Detailed Description

Widget to construct a load applied to a rod.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/loadrodcomponentwidget.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/loadrodcomponentwidget.cpp

4.26 QRS::App::LogWidget Class Reference

Log all the messages sent.

```
#include <logwidget.h>
```

Inheritance diagram for QRS::App::LogWidget:

Public Member Functions

- **LogWidget** (QWidget *parent=nullptr)
- void **log** (QtMsgType messageType, const QString &message)
Represent a message sent.

4.26.1 Detailed Description

Log all the messages sent.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/[logwidget.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/[logwidget.cpp](#)

4.27 QRS::App::MainWindow Class Reference

The main window of the program.

```
#include <mainwindow.h>
```

Inheritance diagram for QRS::App::MainWindow:

Public Member Functions

- **MainWidget** (QWidget *parent=nullptr)
- void **openProject** (QString const &filePath)
Open the specific project.
- bool **saveProject** ()
Save the current project.

Static Public Attributes

- static [LogWidget](#) * **pLogger** = nullptr

Private Slots

- void **createProject** ()
Create a project and substitute the current one with it.
- void **openProjectDialog** ()
Open a project by using a dialog.
- void **openRecentProject** ()
Open the project which was selected from the Recent Projects menu.
- bool **saveAsProject** ()
Save the current project under a new name.
- void **setModified** (bool flag)
Whenever a project has been modified.
- void **representHierarchyProperties** (QVector< [HierarchyModels::AbstractHierarchyItem](#) * > items)
Show information about the selected project items.
- void **saveSettings** ()
Save the current window settings.
- void **restoreSettings** ()
Restore window settings from a file.
- void **createDataObjectsManager** ()
Show a manager for designing data objects.
- void **createRodComponentsManager** ()
Show a manager to set rod components based on the created data objects.
- void **createRodConstructorManager** ()
Show a manager to assemble a rod by using rod components.
- void **aboutProgram** ()
Show information about a program.

Private Member Functions

- void **initializeWindow** ()
Set a state and geometry of [MainWindow](#).
- void **createContent** ()
Create all the widgets and corresponding actions.
- void **closeEvent** (QCloseEvent *pEvent) override
Save project and settings before exit.
- ads::CDockWidget * **createProjectHierarchyWidget** ()
Create a widget to represent a project hierarchy.
- ads::CDockWidget * **createGLWidget** ()
Create an OpenGL widget to render rods.
- ads::CDockWidget * **createCodeWidget** ()
Create a widget enables to code.
- ads::CDockWidget * **createLogWidget** ()
Create a window for logging.
- ads::CDockWidget * **createPropertiesWidget** ()
Create a window to modify properties of selected objects.
- void **setProjectTitle** ()
Show information a name of a project.
- void **retrieveRecentProjects** ()
Retrieve recent projects from the settings file.
- void **addToRecentProjects** ()

- *Add the current project to the recent ones.*
- void **specifyMenuConnections** ()
Set signals and slots for menu actions.
- void **specifyProjectConnections** ()
Set signals and slots for a project.
- bool **saveProjectChangesDialog** ()
Save project changes.
- bool **saveProjectHelper** (QString const &filePath)
Helper method to perform saving of the current project.

Private Attributes

- Ui::MainWindow * **mpUi**
- ads::CDockManager * **mpDockManager**
- QLabel * **mpStatusLabel**
- QTableView * **mpPropertiesWidget**
- [HierarchyModels::ProjectHierarchyModel](#) * **mpProjectHierarchyModel** = nullptr
- [Managers::ManagersFactory](#) * **mpManagersFactory** = nullptr
- [Core::Project](#) * **mpProject**
- QSharedPointer< QSettings > **mpSettings**
- QString **mLastPath**
- QList< QString > **mPathRecentProjects**

4.27.1 Detailed Description

The main window of the program.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/[mainwindow.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/[mainwindow.cpp](#)

4.28 QRS::Managers::ManagersFactory Class Reference

Factory to create managers which utilize and modify project data.

```
#include <managersfactory.h>
```

Inheritance diagram for QRS::Managers::ManagersFactory:

Public Member Functions

- **ManagersFactory** ([Core::Project](#) &project, QString &lastPath, QSettings &settings, QWidget *parent)
- bool **createManager** (AbstractManager::ManagerType type)
Create a manager according to a given type.
- bool **deleteManager** (AbstractManager::ManagerType type)
Destroy a manager by given type.
- [AbstractManager](#) * **manager** (AbstractManager::ManagerType type)
Retrieve a manager of a given type.

Private Member Functions

- void **specifyConnections** ([DataObjectsManager](#) *pManager)
Specify connections of the manager of data objects.
- void **specifyConnections** ([RodComponentsManager](#) *pManager)
Specify connections of the manager of rod components.

Private Attributes

- [Core::Project](#) & **mProject**
- QString & **mLastPath**
- QSettings & **mSettings**
- QWidget * **mpParent**
- std::unordered_map< AbstractManager::ManagerType, [AbstractManager](#) * > **mManagers**

4.28.1 Detailed Description

Factory to create managers which utilize and modify project data.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[managersfactory.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[managersfactory.cpp](#)

4.29 QRS::App::ManagersTab Class Reference

A toolbar consisted of object designers.

```
#include <controltabs.h>
```

Inheritance diagram for QRS::App::ManagersTab:

Signals

- void **actionDataObjectsTriggered** ()
- void **actionRodPropertiesTriggered** ()
- void **actionRodConstructorTriggered** ()

Public Member Functions

- **ManagersTab** (QWidget *parent=nullptr)
Managers tab constructor.

4.29.1 Detailed Description

A toolbar consisted of object designers.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/[controltabs.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/central/[controltabs.cpp](#)

4.30 QRS::Core::MaterialRodComponent Class Reference

Material properties of a rod.

```
#include <materialrodcomponent.h>
```

Inheritance diagram for QRS::Core::MaterialRodComponent:

Public Member Functions

- **MaterialRodComponent** (QString const &name)
- **~MaterialRodComponent** ()
Decrease a number of instances while being destroyed.
- [AbstractRodComponent](#) * **clone** () const override
Clone a material rod component.
- bool **isDataComplete** () const override
Check whether the component data is complete.
- void **serialize** (QDataStream &stream) const override
Serialize all properties of a material component.
- void **deserialize** (QDataStream &stream, DataObjects const &dataObjects) override

Deserialize a material component.

- void [resolveReferences](#) (DataObjects const &dataObjects) override

Resolve references of a material rod component.

- [ScalarDataObject](#) const * **elasticModulus** () const
- [ScalarDataObject](#) const * **shearModulus** () const
- [ScalarDataObject](#) const * **poissonsRatio** () const
- [ScalarDataObject](#) const * **density** () const
- void **setElasticModulus** ([ScalarDataObject](#) const *pElasticModulus)
- void **setShearModulus** ([ScalarDataObject](#) const *pShearModulus)
- void **setPoissonsRatio** ([ScalarDataObject](#) const *pPoissonsRatio)
- void **setDensity** ([ScalarDataObject](#) const *pDensity)

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- QPointer< [ScalarDataObject](#) const > **mpElasticModulus**
- QPointer< [ScalarDataObject](#) const > **mpShearModulus**
- QPointer< [ScalarDataObject](#) const > **mpPoissonsRatio**
- QPointer< [ScalarDataObject](#) const > **mpDensity**

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.30.1 Detailed Description

Material properties of a rod.

4.30.2 Member Function Documentation

4.30.2.1 clone()

```
AbstractRodComponent * MaterialRodComponent::clone ( ) const [override], [virtual]
```

Clone a material rod component.

Implements [QRS::Core::AbstractRodComponent](#).

4.30.2.2 deserialize()

```
void MaterialRodComponent::deserialize (
    QDataStream & stream,
    DataObjects const & dataObjects ) [override], [virtual]
```

Deserialize a material component.

Implements [QRS::Core::AbstractRodComponent](#).

4.30.2.3 isDataComplete()

```
bool MaterialRodComponent::isDataComplete ( ) const [override], [virtual]
```

Check whether the component data is complete.

Implements [QRS::Core::AbstractRodComponent](#).

4.30.2.4 resolveReferences()

```
void MaterialRodComponent::resolveReferences (
    DataObjects const & dataObjects ) [override], [virtual]
```

Resolve references of a material rod component.

Implements [QRS::Core::AbstractRodComponent](#).

4.30.2.5 serialize()

```
void MaterialRodComponent::serialize (
    QDataStream & stream ) const [override], [virtual]
```

Serialize all properties of a material component.

Implements [QRS::Core::AbstractRodComponent](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/materialrodcomponent.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/materialrodcomponent.cpp](#)

4.31 QRS::Managers::MaterialRodComponentWidget Class Reference

Widget to construct a material rod component.

```
#include <materialrodcomponentwidget.h>
```

Inheritance diagram for QRS::Managers::MaterialRodComponentWidget:

Public Member Functions

- **MaterialRodComponentWidget** ([Core::MaterialRodComponent](#) &materialRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void **createContent** ()
Create all the widgets.
- QWidget * **createModuliGroup** ()
Create a group consisted of widgets to set physical moduli.
- QLayout * **createBaseLayout** ()
Create a layout consisted of widgets to set density and Poisson's ratio.
- void **setProperty** ([Core::AbstractDataObject](#) const *pDataObject, auto setFun)
Set a material property which takes a scalar data object.

Private Attributes

- [Core::MaterialRodComponent](#) & **mMaterialRodComponent**

Additional Inherited Members

4.31.1 Detailed Description

Widget to construct a material rod component.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[materialrodcomponentwidget.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[materialrodcomponentwidget.cpp](#)

4.32 QRS::Core::MatrixDataObject Class Reference

Matrix data object.

```
#include <matrixdataobject.h>
```

Inheritance diagram for QRS::Core::MatrixDataObject:

Public Member Functions

- **MatrixDataObject** (QString const &name)
Construct a matrix data object.
- **~MatrixDataObject** ()
Decrease a number of instances while being destroyed.
- **AbstractDataObject * clone** () const override
Clone a matrix data object.
- **DataItemType & addItem** (DataValueType key) override
Insert a new item into [MatrixDataObject](#).
- virtual void **import** (QTextStream &stream) override
Import a matrix data object from a file.

Static Public Member Functions

- static quint32 **numberInstances** ()

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.32.1 Detailed Description

Matrix data object.

4.32.2 Member Function Documentation

4.32.2.1 addItem()

```
DataItemType & MatrixDataObject::addItem (
    DataValueType key ) [override], [virtual]
```

Insert a new item into [MatrixDataObject](#).

Implements [QRS::Core::AbstractDataObject](#).

4.32.2.2 clone()

```
AbstractDataObject * MatrixDataObject::clone ( ) const [override], [virtual]
```

Clone a matrix data object.

Implements [QRS::Core::AbstractDataObject](#).

4.32.2.3 import()

```
void MatrixDataObject::import (
    QTextStream & stream ) [override], [virtual]
```

Import a matrix data object from a file.

Implements [QRS::Core::AbstractDataObject](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/matrixdataobject.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/matrixdataobject.cpp](#)

4.33 QRS::TableModels::MatrixTableModel Class Reference

Table model to represent a matrix data object.

```
#include <matrixtablemodel.h>
```

Inheritance diagram for QRS::TableModels::MatrixTableModel:

Public Member Functions

- **MatrixTableModel** (QWidget *parent=nullptr)
- void **setDataObject** ([Core::AbstractDataObject](#) *pDataObject)
Set a data object to represent.
- bool **setData** (const QModelIndex &indexEdit, const QVariant &value, int role=Qt::EditRole) override
Set the data acquired from a delegate.
- void **insertItemAfterSelected** (QItemSelectionModel *pSelectionModel) override
Insert a new item after selected one.
- void **insertLeadingItemAfterSelected** (QItemSelectionModel *) override
- void **removeSelectedItem** (QItemSelectionModel *pSelectionModel) override
Remove an array under selection.
- void **removeSelectedLeadingItem** (QItemSelectionModel *) override

Private Member Functions

- void **updateContent** ()
Represent all items which a vector data object contains.
- void **clearContent** ()
Clear previously created items.

Private Attributes

- [Core::AbstractDataObject](#) * **mpDataObject** = nullptr

Additional Inherited Members

4.33.1 Detailed Description

Table model to represent a matrix data object.

4.33.2 Member Function Documentation

4.33.2.1 insertItemAfterSelected()

```
void MatrixTableModel::insertItemAfterSelected (
    QItemSelectionModel * pSelectionModel ) [override], [virtual]
```

Insert a new item after selected one.

Implements [QRS::TableModels::TableModelInterface](#).

4.33.2.2 insertLeadingItemAfterSelected()

```
void QRS::TableModels::MatrixTableModel::insertLeadingItemAfterSelected (
    QTableWidgetItem * ) [inline], [override], [virtual]
```

Implements [QRS::TableModels::TableModelInterface](#).

4.33.2.3 removeSelectedItem()

```
void MatrixTableModel::removeSelectedItem (
    QTableWidgetItem * pSelectionModel ) [override], [virtual]
```

Remove an array under selection.

Implements [QRS::TableModels::TableModelInterface](#).

4.33.2.4 removeSelectedLeadingItem()

```
void QRS::TableModels::MatrixTableModel::removeSelectedLeadingItem (
    QTableWidgetItem * ) [inline], [override], [virtual]
```

Implements [QRS::TableModels::TableModelInterface](#).

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/[matrixtablemodel.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/[matrixtablemodel.cpp](#)

4.34 QRS::Core::MechanicalRodComponent Class Reference

Stiffness and mass distributions of a rod.

```
#include <mechanicalrodcomponent.h>
```

Inheritance diagram for QRS::Core::MechanicalRodComponent:

Public Member Functions

- **MechanicalRodComponent** (QString const &name)
- **~MechanicalRodComponent** ()
Decrease a number of instances while being destroyed.
- **AbstractRodComponent** * **clone** () const override
Clone a geometrical rod component.
- bool **isDataComplete** () const override
- void **serialize** (QDataStream &stream) const override
Serialize all properties of a geometrical component.
- void **deserialize** (QDataStream &stream, DataObjects const &dataObjects) override
Deserialize a geometrical component.
- void **resolveReferences** (DataObjects const &dataObjects) override
Resolve references of a geometrical rod component.
- **ScalarDataObject** const * **tensionStiffness** () const
- **ScalarDataObject** const * **torsionalStiffness** () const
- **ScalarDataObject** const * **bendingStiffnessX** () const
- **ScalarDataObject** const * **bendingStiffnessY** () const
- **ScalarDataObject** const * **linearMassDensity** () const
- **ScalarDataObject** const * **inertiaMassMomentX** () const
- **ScalarDataObject** const * **inertiaMassMomentY** () const
- **ScalarDataObject** const * **inertiaMassMomentZ** () const
- **ScalarDataObject** const * **eccentricityX** () const
- **ScalarDataObject** const * **eccentricityY** () const
- **ScalarDataObject** const * **contactDiameter** () const
- void **setTensionStiffness** (**ScalarDataObject** const *pTensionStiffness)
- void **setTorsionalStiffness** (**ScalarDataObject** const *pTorsionalStiffness)
- void **setBendingStiffnessX** (**ScalarDataObject** const *pBendingStiffnessX)
- void **setBendingStiffnessY** (**ScalarDataObject** const *pBendingStiffnessY)
- void **setLinearMassDensity** (**ScalarDataObject** const *pLinearMassDensity)
- void **setInertiaMassMomentX** (**ScalarDataObject** const *pInertiaMassMomentX)
- void **setInertiaMassMomentY** (**ScalarDataObject** const *pInertiaMassMomentY)
- void **setInertiaMassMomentZ** (**ScalarDataObject** const *pInertiaMassMomentZ)
- void **setEccentricityX** (**ScalarDataObject** const *pEccentricityX)
- void **setEccentricityY** (**ScalarDataObject** const *pEccentricityY)
- void **setContactDiameter** (**ScalarDataObject** const *pContactDiameter)

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- QPointer< **ScalarDataObject** const > **mpTensionStiffness**
- QPointer< **ScalarDataObject** const > **mpTorsionalStiffness**
- QPointer< **ScalarDataObject** const > **mpBendingStiffnessX**
- QPointer< **ScalarDataObject** const > **mpBendingStiffnessY**
- QPointer< **ScalarDataObject** const > **mpLinearMassDensity**
- QPointer< **ScalarDataObject** const > **mpInertiaMassMomentX**
- QPointer< **ScalarDataObject** const > **mpInertiaMassMomentY**
- QPointer< **ScalarDataObject** const > **mpInertiaMassMomentZ**
- QPointer< **ScalarDataObject** const > **mpEccentricityX**
- QPointer< **ScalarDataObject** const > **mpEccentricityY**
- QPointer< **ScalarDataObject** const > **mpContactDiameter**

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.34.1 Detailed Description

Stiffness and mass distributions of a rod.

4.34.2 Member Function Documentation

4.34.2.1 clone()

```
AbstractRodComponent * MechanicalRodComponent::clone ( ) const [override], [virtual]
```

Clone a geometrical rod component.

Implements [QRS::Core::AbstractRodComponent](#).

4.34.2.2 deserialize()

```
void MechanicalRodComponent::deserialize (
    QDataStream & stream,
    DataObjects const & dataObjects ) [override], [virtual]
```

Deserialize a geometrical component.

Implements [QRS::Core::AbstractRodComponent](#).

4.34.2.3 isDataComplete()

```
bool QRS::Core::MechanicalRodComponent::isDataComplete ( ) const [inline], [override], [virtual]
```

Implements [QRS::Core::AbstractRodComponent](#).

4.34.2.4 resolveReferences()

```
void MechanicalRodComponent::resolveReferences (
    DataObjects const & dataObjects ) [override], [virtual]
```

Resolve references of a geometrical rod component.

Implements [QRS::Core::AbstractRodComponent](#).

4.34.2.5 serialize()

```
void MechanicalRodComponent::serialize (
    QDataStream & stream ) const [override], [virtual]
```

Serialize all properties of a geometrical component.

Implements [QRS::Core::AbstractRodComponent](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/mechanicalrodcomponent.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/core/mechanicalrodcomponent.cpp](#)

4.35 QRS::Managers::MechanicalRodComponentWidget Class Reference

Widget to construct mechanical rod components consisted of stiffness and mass distributions.

```
#include <mechanicalrodcomponentwidget.h>
```

Inheritance diagram for QRS::Managers::MechanicalRodComponentWidget:

Public Member Functions

- **MechanicalRodComponentWidget** ([Core::MechanicalRodComponent](#) &mechanicalRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void **createContent** ()
Create all the widgets.
- QWidget * **createStiffnessGroup** ()
Create a group consisted of widgets to set stiffness distributions.
- QWidget * **createMassGroup** ()
Create a group consisted of widgets to set mass distributions.
- QWidget * **createEccentricityGroup** ()
Create a group consisted of widgets to set eccentricity distributions.
- QLayout * **createContactDiameterLayout** ()
Create a layout to set a contact diameter.
- void **setProperty** ([Core::AbstractDataObject](#) const *pDataObject, auto setFun)
Set a mechanical property which takes a scalar data object.

Private Attributes

- [Core::MechanicalRodComponent](#) & **mMechanicalRodComponent**

Additional Inherited Members

4.35.1 Detailed Description

Widget to construct mechanical rod components consisted of stiffness and mass distributions.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[mechanicalrodcomponentwidget.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[mechanicalrodcomponentwidget.cpp](#)

4.36 QRS::Core::Project Class Reference

[Project](#) class to interact with a created system of rods.

```
#include <project.h>
```

Inheritance diagram for QRS::Core::Project:

Public Slots

- bool **save** (QString const &dir, QString const &fileName)
Save a project to a file.
- void **setDataObjects** (QRS::Core::DataObjects const &dataObjects, [QRS::Core::HierarchyTree](#) const &hierarchyDataObjects)
Substitute current data objects with new ones.
- void **setRodComponents** (QRS::Core::RodComponents const &rodComponents, [QRS::Core::HierarchyTree](#) const &hierarchyRodComponents)
Substitute current rod components with new ones.

Signals

- void **dataObjectsSubstituted** ()
- void **propertiesDataObjectsChanged** ()
- void **rodComponentsSubstituted** ()
- void **propertiesRodComponentsChanged** ()
- void **projectHierarchyChanged** ()

Public Member Functions

- **Project** (QString const &name)
Construct a clean project with the user specified name.
- **Project** (QString const &path, QString const &fileName)
Read a project from a file.
- DataIDType **numberDataObjects** () const
- [AbstractDataObject](#) * **addDataObject** (AbstractDataObject::ObjectType type)
Create a data object with the specified type.
- DataObjects **cloneDataObjects** () const
Clone data objects.
- [HierarchyTree](#) **cloneHierarchyDataObjects** () const
- DataIDType **numberRodComponents** () const
- [AbstractRodComponent](#) * **addGeometry** ()
Create a geometrical rod component.
- [AbstractRodComponent](#) * **addCrossSection** (AbstractSectionRodComponent::SectionType sectionType)
Create a cross section.
- [AbstractRodComponent](#) * **addMaterial** ()
Add a material rod component.
- [AbstractRodComponent](#) * **addLoad** ()
Add a rod load.
- [AbstractRodComponent](#) * **addConstraint** ()
Add a rod constraint.
- [AbstractRodComponent](#) * **addMechanical** ()
Add a mechanical rod component.
- RodComponents **cloneRodComponents** () const
Clone rod components.
- [HierarchyTree](#) **cloneHierarchyRodComponents** () const
- QString const & **name** () const
- QString const & **filePath** () const
- void **importDataObjects** (QString const &path, QString const &fileName)
Import several data objects from a file.

Static Public Member Functions

- static QString const & **getFileExtension** ()

Private Member Functions

- void **emplaceRodComponent** ([AbstractRodComponent](#) *pRodComponent)
Emplace a rod component into a project.

Private Attributes

- quint32 **mID**
Unique project identifier.
- QString **mName**
[Project](#) name.
- QString **mFilePath**
Path to a file where a project is stored.
- DataObjects **mDataObjects**
Data objects.
- [HierarchyTree](#) **mHierarchyDataObjects**
Hierarchy of data objects.
- RodComponents **mRodComponents**
Rod components.
- [HierarchyTree](#) **mHierarchyRodComponents**
Hierarchy of rod components.

Static Private Attributes

- static const QString **skProjectExtension** = ".qrs"
File extensionn.

Friends

- class **QRS::HierarchyModels::ProjectHierarchyModel**
- class **QRS::Managers::ManagersFactory**

4.36.1 Detailed Description

[Project](#) class to interact with a created system of rods.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[project.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[project-base.cpp](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[project-io.cpp](#)

4.37 QRS::HierarchyModels::ProjectHierarchyModel Class Reference

Project hierarchy representative.

```
#include <projecthierarchymodel.h>
```

Inheritance diagram for QRS::HierarchyModels::ProjectHierarchyModel:

Public Slots

- void **validateItemSelection** ()
Check if an item selection is correct and if it is not – correct it.

Signals

- void **selectionValidated** (QVector< [QRS::HierarchyModels::AbstractHierarchyItem](#) * > validatedItems)

Public Member Functions

- **ProjectHierarchyModel** (QString const &mimeType, QTreeView *pView=nullptr)
- void **updateContent** () override
Update all the content.
- void **clearContent** () override
Clear all the items.
- void **setProject** ([Core::Project](#) *pProject)
Set a project to represent.

Private Member Functions

- [DataObjectsHierarchyItem](#) * **retrieveDataObjectsItem** ()
Retrieve a representative of data objects.
- [RodComponentsHierarchyItem](#) * **retrieveRodComponentsItem** ()
Retrieve a representative of rod components.

Private Attributes

- [Core::Project](#) * **mpProject** = nullptr

Additional Inherited Members

4.37.1 Detailed Description

Project hierarchy representative.

4.37.2 Member Function Documentation

4.37.2.1 clearContent()

```
void ProjectHierarchyModel::clearContent ( ) [override], [virtual]
```

Clear all the items.

Implements [QRS::HierarchyModels::AbstractHierarchyModel](#).

4.37.2.2 updateContent()

```
void ProjectHierarchyModel::updateContent ( ) [override], [virtual]
```

Update all the content.

Implements [QRS::HierarchyModels::AbstractHierarchyModel](#).

The documentation for this class was generated from the following files:

- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/projecthierarchymodel.h](#)
- [/home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/projecthierarchymodel.cpp](#)

4.38 QRS::HierarchyModels::RodComponentsHierarchyItem Class Reference

Item to represent a hierarchy of rod components.

```
#include <rodcomponentshierarchyitem.h>
```

Inheritance diagram for QRS::HierarchyModels::RodComponentsHierarchyItem:

Public Member Functions

- **RodComponentsHierarchyItem** (Core::RodComponents &rodComponents, [Core::HierarchyTree](#) &hierarchyRodComponents, QString const &text="Root", QIcon const &icon=QIcon())
Create the representative of the structure of rod components.
- **RodComponentsHierarchyItem** ([Core::HierarchyNode](#) *pNode, [Core::AbstractRodComponent](#) *pRodComponent)
Construct an item to represent a rod component.
- **RodComponentsHierarchyItem** ([Core::HierarchyNode](#) *pNode)
Construct an item to represent a directory.
- int [type](#) () const override

Private Member Functions

- void **appendItems** (Core::RodComponents &rodComponents, [Core::HierarchyNode](#) *pNode)
Create items based on the position in the tree structure.

Private Attributes

- [Core::AbstractRodComponent](#) * **mpRodComponent** = nullptr

Friends

- class **RodComponentsHierarchyModel**

Additional Inherited Members

4.38.1 Detailed Description

Item to represent a hierarchy of rod components.

4.38.2 Member Function Documentation

4.38.2.1 type()

```
int QRS::HierarchyModels::RodComponentsHierarchyItem::type ( ) const [inline], [override], [virtual]
```

Implements [QRS::HierarchyModels::AbstractHierarchyItem](#).

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchyitem.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/rodcomponentshierarchyitem.cpp

4.39 QRS::HierarchyModels::RodComponentsHierarchyModel Class Reference

Tree model to represent and modify a hierarchy of rod components.

```
#include <rodcomponentshierarchymodel.h>
```

Inheritance diagram for QRS::HierarchyModels::RodComponentsHierarchyModel:

Public Slots

- void **retrieveSelectedItem** ()
Retrieve a selected rod component.
- void **removeSelectedItems** ()
Remove rod components under selection.

Signals

- void **selected** (Core::DataIDType id)
- void **selectionCleared** ()

Public Member Functions

- **RodComponentsHierarchyModel** (Core::RodComponents &rodComponents, [Core::HierarchyTree](#) &hierarchyRodComponents, QString const &mimeType, QTreeView *pView=nullptr)
- void [updateContent](#) () override
Update all the content.
- void [clearContent](#) () override
Clear all the items.
- bool **isEmpty** () const
Check if there are data objects to represent.
- void **selectItem** (int iRow)
Select an item by row index.

Private Slots

- void **renameItem** (QStandardItem *pStandardItem)
Rename a rod component after editing.

Private Attributes

- Core::RodComponents & **mRodComponents**
- Core::HierarchyTree & **mHierarchyRodComponents**

Additional Inherited Members

4.39.1 Detailed Description

Tree model to represent and modify a hierarchy of rod components.

4.39.2 Member Function Documentation

4.39.2.1 clearContent()

```
void RodComponentsHierarchyModel::clearContent ( ) [override], [virtual]
```

Clear all the items.

Implements [QRS::HierarchyModels::AbstractHierarchyModel](#).

4.39.2.2 updateContent()

```
void RodComponentsHierarchyModel::updateContent ( ) [override], [virtual]
```

Update all the content.

Implements [QRS::HierarchyModels::AbstractHierarchyModel](#).

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/[rodcomponentshierarchymodel.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/hierarchy/[rodcomponentshierarchymodel.cpp](#)

4.40 QRS::Managers::RodComponentsManager Class Reference

Manager to create rod components, such as a geometry, cross section and force.

```
#include <rodcomponentsmanager.h>
```

Inheritance diagram for QRS::Managers::RodComponentsManager:

Public Slots

- void **apply** () override
Apply all the changes made by user.
- [Core::AbstractRodComponent](#) * **addGeometry** ()
Add a geometrical component.
- [Core::AbstractRodComponent](#) * **addSection** ([Core::AbstractSectionRodComponent::SectionType](#) sectionType)
Add a cross section.
- [Core::AbstractRodComponent](#) * **addMaterial** ()
Add a material component.
- [Core::AbstractRodComponent](#) * **addLoad** ()
Add a rod load.
- [Core::AbstractRodComponent](#) * **addConstraint** ()
Add a rod constraint.
- [Core::AbstractRodComponent](#) * **addMechanical** ()
Add a mechanical rod component.
- void **resolveRodComponentsReferences** ()
Resolve references of rod components.

Signals

- void **applied** ([Core::RodComponents](#) const &rodComponents, [Core::HierarchyTree](#) const &hierarchyRodComponents)
- void **editDataObjectRequested** ([Core::DataIDType](#) id)

Public Member Functions

- **RodComponentsManager** ([Core::DataObjects](#) &dataObjects, [Core::HierarchyTree](#) &hierarchyDataObjects, [Core::RodComponents](#) &&rodComponents, [Core::HierarchyTree](#) &&hierarchyRodComponents, [QString](#) &lastPath, [QSettings](#) &settings, [QWidget](#) *parent=nullptr)
- void **selectRodComponent** (int iRow)
Select a rod component by row index.
- void **updateDataObjects** ()
Update the representation of data objects.

Private Member Functions

- void **createContent** ()
Create all the widgets.
- [QLayout](#) * **createDialogControls** ()
Create dialog controls.
- [ads::CDockWidget](#) * **createHierarchyRodComponentsWidget** ()
Create a widget to show a hierarchy of rod components.
- [ads::CDockWidget](#) * **createConstructorDockWidget** ()
Create a dock widget to contain constructors of rod components.
- [ads::CDockWidget](#) * **createHierarchyDataObjectsWidget** ()
Create a widget to show a hierarchy of data objects.
- void **emplaceRodComponent** ([Core::AbstractRodComponent](#) *pRodComponent)

- Helper function to insert a rod component into the manager.*
- void **representRodComponent** (Core::DataIDType id)
Represent a selected rod component according to its type.
- void **clearRodComponentRepresentation** ()
Delete a widget to represent properties of a rod component.
- QToolBar * **createMainToolBar** ()
Create a menu to choose types of components to construct.
- QWidget * **makeGeometryToolBar** ()
Create a toolbar to create geometrical components.
- QWidget * **makeSectionsToolBar** ()
Create a toolbar to construct cross sections.
- QWidget * **makeBoundaryConditionsToolBar** ()
Create a toolbar to construct boundary conditions.
- QWidget * **makeLoadingToolBar** ()
Create a toolbar to construct loading.
- QWidget * **makeMaterialToolBar** ()
Create a toolbar to construct materials.
- QWidget * **makeMechanicalToolBar** ()
Create a toolbar to construct mechanical components.
- QWidget * **makeModificationToolBar** ()
Create a toolbar to modify rod components.

Private Attributes

- ads::CDockWidget * **mpComponentDockWidget**
- QTreeView * **mpTreeRodComponents**
- Core::DataObjects & **mDataObjects**
- [Core::HierarchyTree](#) & **mHierarchyDataObjects**
- Core::RodComponents **mRodComponents**
- [Core::HierarchyTree](#) **mHierarchyRodComponents**
- [HierarchyModels::DataObjectsHierarchyModel](#) * **mpTreeDataObjectsModel**
- [HierarchyModels::RodComponentsHierarchyModel](#) * **mpTreeRodComponentsModel**

Additional Inherited Members

4.40.1 Detailed Description

Manager to create rod components, such as a geometry, cross section and force.

The documentation for this class was generated from the following files:

- </home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/rodcomponentsmanager.h>
- </home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/rodcomponentsmanager.cpp>

4.41 QRS::Core::Array< T >::Row< U > Struct Template Reference

Proxy class to acquire a row by index.

Public Member Functions

- **Row** (T *pData)
- T & **operator[]** (IndexType iCol)
- T const & **operator[]** (IndexType iCol) const

Public Attributes

- T * **pRow**

4.41.1 Detailed Description

```
template<typename T>
template<typename U>
struct QRS::Core::Array< T >::Row< U >
```

Proxy class to acquire a row by index.

The documentation for this struct was generated from the following file:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/array.h

4.42 QRS::Core::ScalarDataObject Class Reference

Scalar data object.

```
#include <scalardataobject.h>
```

Inheritance diagram for QRS::Core::ScalarDataObject:

Public Member Functions

- **ScalarDataObject** (QString const &name)
Construct a scalar data object.
- **~ScalarDataObject** ()
Decrease a number of instances while being destroyed.
- **AbstractDataObject * clone** () const override
Clone a scalar data object.
- **DataItemType & addItem** (DataValueType key) override
Insert a new item into [ScalarDataObject](#).
- virtual void **import** (QTextStream &stream) override
Import a scalar data object from a file.

Static Public Member Functions

- static quint32 **numberInstances** ()

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.42.1 Detailed Description

Scalar data object.

4.42.2 Member Function Documentation

4.42.2.1 addItem()

```
DataItemType & ScalarDataObject::addItem (
    DataValueType key ) [override], [virtual]
```

Insert a new item into [ScalarDataObject](#).

Implements [QRS::Core::AbstractDataObject](#).

4.42.2.2 clone()

```
AbstractDataObject * ScalarDataObject::clone ( ) const [override], [virtual]
```

Clone a scalar data object.

Implements [QRS::Core::AbstractDataObject](#).

4.42.2.3 import()

```
void ScalarDataObject::import (
    QTextStream & stream ) [override], [virtual]
```

Import a scalar data object from a file.

Implements [QRS::Core::AbstractDataObject](#).

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[scalardataobject.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/[scalardataobject.cpp](#)

4.43 QRS::Core::SurfaceDataObject Class Reference

Surface data object.

```
#include <surfacedataobject.h>
```

Inheritance diagram for QRS::Core::SurfaceDataObject:

Public Member Functions

- **SurfaceDataObject** (QString const &name)
Construct a surface data object.
- **~SurfaceDataObject** ()
Decrease a number of instances while being destroyed.
- **AbstractDataObject * clone** () const override
Clone a surface data object.
- **DataItemType & addItem** (DataValueType key) override
Insert a new item into [SurfaceDataObject](#).
- DataKeyType **addLeadingItem** (DataValueType key)
Add a leading item.
- void **removeLeadingItem** (DataValueType key)
Remove a leading item.
- bool **changeLeadingItemKey** (DataKeyType oldKey, DataKeyType newKey)
Modify a leading item key.
- quint32 **numberLeadingItems** () const
- DataHolder & **getLeadingItems** ()
- void **serialize** (QDataStream &stream) const override
Serialize additional data of a surface object.
- virtual void **deserialize** (QDataStream &stream) override
Deserialize additional data of a surface object.
- virtual void **import** (QTextStream &stream) override
Import a surface data object from a file.

Static Public Member Functions

- static quint32 **numberInstances** ()

Private Attributes

- DataHolder **mLeadingItems**

Static Private Attributes

4.43.1 Detailed Description

Surface data object.

4.43.2 Member Function Documentation

4.43.2.1 addItem()

```
DataItemType & SurfaceDataObject::addItem (
    DataValueType key ) [override], [virtual]
```

Insert a new item into [SurfaceDataObject](#).

Implements [QRS::Core::AbstractDataObject](#).

4.43.2.2 clone()

```
AbstractDataObject * SurfaceDataObject::clone ( ) const [override], [virtual]
```

Clone a surface data object.

Implements [QRS::Core::AbstractDataObject](#).

4.43.2.3 deserialize()

```
void SurfaceDataObject::deserialize (
    QDataStream & stream ) [override], [virtual]
```

Deserialize additional data of a surface object.

Reimplemented from [QRS::Core::AbstractDataObject](#).

4.43.2.4 import()

```
void SurfaceDataObject::import (
    QTextStream & stream ) [override], [virtual]
```

Import a surface data object from a file.

Implements [QRS::Core::AbstractDataObject](#).

4.43.2.5 serialize()

```
void SurfaceDataObject::serialize (
    QDataStream & stream ) const [override], [virtual]
```

Serialize additional data of a surface object.

Reimplemented from [QRS::Core::AbstractDataObject](#).

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/surfacedataobject.h
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/core/surfacedataobject.cpp

4.44 QRS::TableModels::SurfaceTableModel Class Reference

Table model to represent a surface data object.

```
#include <surfacetablemodel.h>
```

Inheritance diagram for QRS::TableModels::SurfaceTableModel:

Public Member Functions

- **SurfaceTableModel** (QWidget *parent=nullptr)
- void **setDataObject** ([Core::SurfaceDataObject](#) *pDataObject)
Set a surface data object to represent.
- bool **setData** (const QModelIndex &indexEdit, const QVariant &value, int role=Qt::EditRole) override
Set the data acquired from a delegate.
- void **insertItemAfterSelected** (QItemSelectionModel *pSelectionModel) override
Insert a new item after selected one.
- void **removeSelectedItem** (QItemSelectionModel *pSelectionModel) override
Remove an array under selection.
- void **insertLeadingItemAfterSelected** (QItemSelectionModel *pSelectionModel) override
Add a new leading item after selected one.
- void **removeSelectedLeadingItem** (QItemSelectionModel *pSelectionModel) override
Remove a selected leading item.

Private Member Functions

- void **updateContent** ()
Represent all items which a data object contains.
- void **clearContent** ()
Clear previously created items.

Private Attributes

- [Core::SurfaceDataObject](#) * **mpDataObject** = nullptr

Additional Inherited Members

4.44.1 Detailed Description

Table model to represent a surface data object.

4.44.2 Member Function Documentation

4.44.2.1 insertItemAfterSelected()

```
void SurfaceTableModel::insertItemAfterSelected (
    QTableWidgetItem * pSelectionModel ) [override], [virtual]
```

Insert a new item after selected one.

Implements [QRS::TableModels::TableModelInterface](#).

4.44.2.2 insertLeadingItemAfterSelected()

```
void SurfaceTableModel::insertLeadingItemAfterSelected (
    QTableWidgetItem * pSelectionModel ) [override], [virtual]
```

Add a new leading item after selected one.

Implements [QRS::TableModels::TableModelInterface](#).

4.44.2.3 removeSelectedItem()

```
void SurfaceTableModel::removeSelectedItem (
    QTableWidgetItem * pSelectionModel ) [override], [virtual]
```

Remove an array under selection.

Implements [QRS::TableModels::TableModelInterface](#).

4.44.2.4 removeSelectedLeadingItem()

```
void SurfaceTableModel::removeSelectedLeadingItem (
    QTableWidgetItem * pSelectionModel ) [override], [virtual]
```

Remove a selected leading item.

Implements [QRS::TableModels::TableModelInterface](#).

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/[surfacetablemodel.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/[surfacetablemodel.cpp](#)

4.45 QRS::TableModels::TableModelInterface Class Reference

User interface to add and remove items.

```
#include <tablemodelinterface.h>
```

Inheritance diagram for QRS::TableModels::TableModelInterface:

Public Member Functions

- virtual void [insertItemAfterSelected](#) (QItemSelectionModel *pSelectionModel)=0
- virtual void [insertLeadingItemAfterSelected](#) (QItemSelectionModel *pSelectionModel)=0
- virtual void [removeSelectedItem](#) (QItemSelectionModel *pSelectionModel)=0
- virtual void [removeSelectedLeadingItem](#) (QItemSelectionModel *pSelectionModel)=0

Static Public Member Functions

- static QStandardItem * **makeDoubleItem** (double value)
Helper function to make an item which holds a double value.
- static QList< QStandardItem * > **prepareRow** ([Core::Array](#)< double > const &array, quint32 iRow)
Helper function to copy a row from an array.
- static QList< QStandardItem * > **prepareRow** (double const &key, [Core::Array](#)< double > const &array, quint32 iRow)
Helper function to copy a row from an array and associate it with an key.
- static QList< QStandardItem * > **prepareRow** (QString const &name, [Core::Array](#)< double > const &array, quint32 iRow)
Helper function to copy a row from an array and associate it with a name.
- static QStandardItem * **makeLabelItem** (QString const &name)
Helper function to create an item which holds a string and cannot be modified.

4.45.1 Detailed Description

User interface to add and remove items.

4.45.2 Member Function Documentation

4.45.2.1 insertItemAfterSelected()

```
virtual void QRS::TableModels::TableModelInterface::insertItemAfterSelected (
    QItemSelectionModel * pSelectionModel ) [pure virtual]
```

Implemented in [QRS::TableModels::BaseTableModel](#), [QRS::TableModels::MatrixTableModel](#), and [QRS::TableModels::SurfaceTableModel](#).

4.45.2.2 insertLeadingItemAfterSelected()

```
virtual void QRS::TableModels::TableModelInterface::insertLeadingItemAfterSelected (
    QItemSelectionModel * pSelectionModel ) [pure virtual]
```

Implemented in [QRS::TableModels::SurfaceTableModel](#).

4.45.2.3 removeSelectedItem()

```
virtual void QRS::TableModels::TableModelInterface::removeSelectedItem (
    QItemSelectionModel * pSelectionModel ) [pure virtual]
```

Implemented in [QRS::TableModels::BaseTableModel](#), [QRS::TableModels::MatrixTableModel](#), and [QRS::TableModels::SurfaceTableModel](#).

4.45.2.4 removeSelectedLeadingItem()

```
virtual void QRS::TableModels::TableModelInterface::removeSelectedLeadingItem (
    QTableWidgetItem * pSelectionModel ) [pure virtual]
```

Implemented in [QRS::TableModels::SurfaceTableModel](#).

The documentation for this class was generated from the following files:

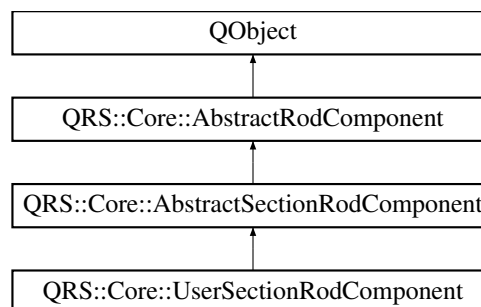

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/[tablemodelinterface.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/models/table/[tablemodelinterface.cpp](#)

4.46 QRS::Core::UserSectionRodComponent Class Reference

Section which properties are defined by user.

```
#include <usersectionrodcomponent.h>
```

Inheritance diagram for QRS::Core::UserSectionRodComponent:

Public Member Functions

- **UserSectionRodComponent** (QString const &name)
- [AbstractRodComponent](#) * [clone](#) () const override
Clone a user-defined cross section.
- bool [isDataComplete](#) () const override
Check if specified data is complete.
- [ScalarDataObject](#) const * **area** () const
- [ScalarDataObject](#) const * **inertiaMomentTorsional** () const
- [ScalarDataObject](#) const * **inertiaMomentX** () const
- [ScalarDataObject](#) const * **inertiaMomentY** () const
- [ScalarDataObject](#) const * **centerCoordinateX** () const
- [ScalarDataObject](#) const * **centerCoordinateY** () const
- void **setArea** ([ScalarDataObject](#) const *pArea)
- void **setInertiaMomentTorsional** ([ScalarDataObject](#) const *pInertiaMomentTorsional)
- void **setInertiaMomentX** ([ScalarDataObject](#) const *pInertiaMomentX)
- void **setInertiaMomentY** ([ScalarDataObject](#) const *pInertiaMomentY)
- void **setCenterCoordinateX** ([ScalarDataObject](#) const *pCenterCoordinateX)
- void **setCenterCoordinateY** ([ScalarDataObject](#) const *pCenterCoordinateY)

Additional Inherited Members

4.46.1 Detailed Description

Section which properties are defined by user.

4.46.2 Member Function Documentation

4.46.2.1 clone()

```
AbstractRodComponent * UserSectionRodComponent::clone ( ) const [override], [virtual]
```

Clone a user-defined cross section.

Implements [QRS::Core::AbstractRodComponent](#).

4.46.2.2 isDataComplete()

```
bool UserSectionRodComponent::isDataComplete ( ) const [override], [virtual]
```

Check if specified data is complete.

Some of properties may be of zero values to achieve infinite stiffness

Implements [QRS::Core::AbstractRodComponent](#).

The documentation for this class was generated from the following files:

- </home/qinterfly/Library/Projects/Current/QRodSystems/src/core/usersectionrodcomponent.h>
- </home/qinterfly/Library/Projects/Current/QRodSystems/src/core/usersectionrodcomponent.cpp>

4.47 QRS::Managers::UserSectionRodComponentWidget Class Reference

Widget to construct a user-defined section of a rod.

```
#include <usersectionrodcomponentwidget.h>
```

Inheritance diagram for QRS::Managers::UserSectionRodComponentWidget:

Public Member Functions

- **UserSectionRodComponentWidget** ([Core::UserSectionRodComponent](#) &userSectionRodComponent, QString const &mimeType, QWidget *parent=nullptr)

Private Member Functions

- void **createContent** ()
Create all the content.
- QLayout * **createAreaLayout** ()
Create an area layout.
- QWidget * **createInertiaMomentsGroup** ()
Create a group consisted of widgets to set moments of inertia.
- QWidget * **createCenterCoordinatesGroup** ()
Create a group consisted of widgets to set coordinates of the center.
- void **setProperty** ([Core::AbstractDataObject](#) const *pDataObject, auto setFun)
Set a section property which takes a scalar data object.

Private Attributes

- [Core::UserSectionRodComponent](#) & mUserSectionRodComponent

Additional Inherited Members

4.47.1 Detailed Description

Widget to construct a user-defined section of a rod.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[usersectionrodcomponentwidget.h](#)
- /home/qinterfly/Library/Projects/Current/QRodSystems/src/managers/[usersectionrodcomponentwidget.cpp](#)

4.48 QRS::Core::VectorDataObject Class Reference

Vector data object.

```
#include <vectordataobject.h>
```

Inheritance diagram for QRS::Core::VectorDataObject:

Public Member Functions

- **VectorDataObject** (QString const &name)
Construct a vector data object.
- **~VectorDataObject** ()
Decrease a number of instances while being destroyed.
- **AbstractDataObject** * **clone** () const override
Clone a vector data object.
- **DataItemType** & **addItem** (DataValueType key) override
Insert a new item into [VectorDataObject](#).
- virtual void **import** (QTextStream &stream) override
Import a vector data object from a file.

Static Public Member Functions

- static quint32 **numberInstances** ()

Static Private Attributes

- static quint32 **smNumInstances** = 0

Additional Inherited Members

4.48.1 Detailed Description

Vector data object.

4.48.2 Member Function Documentation

4.48.2.1 addItem()

```
DataItemType & VectorDataObject::addItem (  
    DataValueType key ) [override], [virtual]
```

Insert a new item into [VectorDataObject](#).

Implements [QRS::Core::AbstractDataObject](#).

4.48.2.2 clone()

```
AbstractDataObject * VectorDataObject::clone ( ) const [override], [virtual]
```

Clone a vector data object.

Implements [QRS::Core::AbstractDataObject](#).

4.48.2.3 import()

```
void VectorDataObject::import (
    QTextStream & stream ) [override], [virtual]
```

Import a vector data object from a file.

Implements [QRS::Core::AbstractDataObject](#).

The documentation for this class was generated from the following files:

- </home/qinterfly/Library/Projects/Current/QRodSystems/src/core/vectordataobject.h>
- </home/qinterfly/Library/Projects/Current/QRodSystems/src/core/vectordataobject.cpp>

4.49 QRS::Graph::View3D Class Reference

A widget to represent the resulted rod system.

```
#include <view3d.h>
```

Inheritance diagram for QRS::Graph::View3D:

Public Member Functions

- **View3D** (QWidget *parent=nullptr)

Protected Member Functions

- void **initializeGL** () override
Initialize a graphical scene.
- void **paintGL** () override
Render its content.

Private Attributes

- bool **mCore**

4.49.1 Detailed Description

A widget to represent the resulted rod system.

The documentation for this class was generated from the following files:
