#### 4.1.1 Detailed Description

Data object which is designied in the way to be represented in a table easily.

#### 4.1.2 Member Function Documentation

#### 4.1.2.1 deserialize()

Partly deserialize an abstract data object.

It is assumed that a type and name have already been assigned. So, only an identifier and items need to be set.

Reimplemented in QRS::Core::SurfaceDataObject.

#### 4.1.2.2 getAvailableItemKey()

Check if a given key is unique

#### Returns

Returns the input value of the key if it is unique, otherwise – a first available key
